Collection assessment can be defined as the systematic quantitative and qualitative measurement of the degree to which a library's collections meet the library's goals, objectives, and the needs of its users. E-resources are creating new challenges for collection assessment, which require that the collection be measured, analyzed, and judged according to specific criteria for relevancy, size, quality, and use. The Handbook of Research on Digital Content Management and Development in Modern Libraries is a critical scholarly resource that examines collection management and quality within information services. Featuring a wide range of topics such as e-resources, knowledge management, and consortia, this book is ideal for professionals, academicians, academic librarians, researchers, and students in the fields of library and information science, education, computer science, and information technology. Moreover, the book will provide insights and support executives concerned with the management of expertise, knowledge, information, and organizational development in different types of work communities and environments.

Hybrid Knowledge in the Early East India Company World presents a new interpretation of the development of the English East India Company between 1660 and 1720. The book explores the connections between scholarship, patronage, diplomacy, trade, and colonial settlement in the early modern world. Links of patronage between cosmopolitan writers and collectors and scholars associated with the Royal Society of London and the universities are investigated. Winterbottom shows how innovative works of scholarship - covering natural history, ethnography, theology, linguistics, medicine, and agriculture - were created amid multi-directional struggles for supremacy in Asia, the Indian Ocean and the Atlantic. The role of non-elite actors including slaves in transferring knowledge and skills between settlements is explored in detail.

Working within a framework of environmental philosophy and environmental ethics, this book describes and postulates alternative understandings of nature in Indian traditions of thought, particularly philosophy. The interest in alternative conceptualizations of nature has gained significance after many thinkers pointed out that attitudes to the environment are determined to a large extent by our presuppositions of nature. This book is particularly timely from that perspective. It begins with a brief description of the concept of nature and a history of the idea of nature in Western thought. This provides readers with a context to the issues around the concept of nature in environmental philosophy, setting a foundation for further discussion about alternate conceptualizations of nature and their significance. In particular, the work covers a wide array of textual and non-textual sources to link and understand nature from classical Indian philosophical perspectives as well as popular understandings in Indian literary texts and cultural practices. Popular issues in environmental philosophy are discussed in detail, such as: What is 'nature' in Indian philosophy? How do people perceive nature through landscape and mythological and cultural narratives? In what ways is nature sacred in India? To make the discussion relevant to contemporary readers, the book includes a section on the ecological and ethical implications of some philosophical concepts and critical perspectives on alternate conceptualizations of nature.

Ninian Smart came to public prominence as the founding Professor of the first British university Department of Religious Studies in the late 1960s. His pioneering views on education in religion proved hugely influential at all levels, from primary schools to academic teaching and research. An unending string of publications, many of them accessible to the general public, sustained a reputation that became worldwide. Here, for the first time, a selection of Ninian Smart's wide-ranging writings is organised systematically under a set of categories which both comprehend and also illuminate his varied output over a career spanning half a century. The editor, John Shepherd, was Principal Lecturer in Religion and Philosophy at the University of Cumbria. He first met Smart as a postgraduate student, and recently helped establish the Ninian Smart Archive at the University of Lancaster.

'The Grand Design', by eminent scientist Stephen Hawking, is the latest blockbusting contribution to the so-called New Atheist debate, and claims that the laws of physics themselves brought the Universe into being, rather than God. In this swift and forthright reply, John Lennox, Oxford mathematician and author of 'God's Undertaker', exposes the flaws in Hawking's logic. In lively, layman's terms, Lennox guides us through the key points in Hawking's arguments - with clear explanations of the latest scientific and philosophical methods and theories - and demonstrates that far from disproving a Creator God, they make his existence seem all the more probable.

Political philosophy is not a well-defined field. It hovers between political theory and classical philosophy. Few early political thinkers could have anticipated the most pressing political issues of our time: the need to stop global warming; the reduction of nuclear armaments; the rise of inequality between individuals and nations; and the struggle against authoritarianism, particularly when it comes disguised as democracy or as socialism. Here, celebrated philosopher Mario Bunge

masterfully integrates socio-political theory into a philosophical exploration of power and resource distribution in the world today. Bunge contends that even recent political thinkers have generally failed to address the political underpinnings of topical issues. Environmental degradation, gender and race discriminations, participative democracy, nationalism, imperialism, the North-South divide, resource wars, and the industrial-military complex have all largely been bypassed in political thinking. Even connections between poverty and environmental degradation, and between inequality and bad health, have escaped the attention of those who would call themselves political thinkers. Bunge believes that political philosophers should pay more attention to social indicators, such as the standard index of income inequality and the United Nations human development index. It is pointless to write about redistributive policies unless we have a shared understanding of current wealth distribution. This is, in short, a modern treatise on sociopolitical concerns.

Chakravarty Rajagopalachari or Rajaji was a great freedom fighter, thinker, writer, administrator, politician, statesman and patriot. This book is about his political thoughts on 'dharma', religion, political parties, democracy, socialism, nationalism, internationalism and many other aspects of life. It is also about various influences on Rajaji, which led to the foundation of his thoughts. Rajaji believed that there was no such thing as resting on one's oars, as we have a duty to perform, as best as we can, to make our nation a better place to live in. The story of several milestones in his life, his contributions in different walks of life, as well as the relevance of his ideologies in present times, have also been covered in this book to make it interesting and informative reading.

Time's 'Man of the Century', Albert Einstein is the unquestioned founder of modern physics. His theory of relativity is the most important scientific idea of the modern era. In this short book Einstein explains, using the minimum of mathematical terms, the basic ideas and principles of the theory which has shaped the world we live in today. Unsurpassed by any subsequent books on relativity, this remains the most popular and useful exposition of Einstein's immense contribution to human knowledge.

A work devoted to the study and characteristics of crowds. An endeavor to examine the difficult problem presented by crowds in a purely scientific matter, proceeding with method, without being influenced by opinions, theories and doctrines. With sections devoted to the mind of crowds, opinions and beliefs of crowds and the classification and description of the different kinds of crowds. *Philosophy of Nature* Univ of California Press

An authorised reissue of the long out of print classic textbook, *Advanced Calculus* by the late Dr Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revered but hard to find textbook for the advanced calculus course for decades. This book is based on an honors course in advanced calculus that the authors gave in the 1960's. The foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in any one year. It can accordingly be used (with omissions) as a text for a year's course in advanced calculus, or as a text for a three-semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view, together with some acquaintance with linear algebra. The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention *Differential and Integral Calculus* by R Courant, *Calculus* by T Apostol, *Calculus* by M Spivak, and *Pure Mathematics* by G Hardy. The reader should also have some experience with partial derivatives. In overall plan the book divides roughly into a first half which develops the calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds.
