The contributors explore the complex issues surrounding caring for children, analyzing the connections between services and programs to reveal how childcare, parental leave, informal care, live-in caregiver programs, and child tax benefits affect the well-being of Canadian

children and their families. They affirm the necessity of questioning political attitudes and arrangements, and ask what social movements can do to promote positive change in approaches to the care of children.

This book explains and demonstrates to students when to use and how to apply the quantitative and qualitative techniques that they'll need to do their own social research. Using actual examples from psychology, sociology, anthropology, health and education, the book provides readers with both a conceptual understanding of each technique as well as showing them how to use the technique.

Social Classes and Social Credit in Alberta Routledge

This book focuses on a key issue in the methodology of the social and behavioural sciences: the mixing of different research methods. The extent to which qualitative and quantitative research differ from one another has long been a subject of debate. Although many methodologists have concluded that the two approaches are not mutually exclusive, there are few books on either the theory or the practice of mixing methods. *Mixing Methods: Qualitative and Quantitative Research* presents a comprehensive discussion of the theoretical, methodological and practical issues. It also covers a number of case studies of research which have successfully combined qualitative and quantitative approaches. Contributors include sociologists who have written extensively on the methodology of the social sciences and researchers who have concerned themselves with important social policy issues in the fields of further education, community services and household finances.
