Over 220,000 entries representing some 56,000 Library of Congress subject headings. Covers all disciplines of science and technology, e.g., engineering, agriculture, and domestic arts. Also contains at least 5000 titles published before 1876. Has many applications in libraries, information centers, and other organizations concerned with scientific and technological literature. Subject index contains main listing of entries. Each entry gives cataloging as prepared by the Library of Congress. Author/title indexes.

### GUIDE TO THE VASCULAR PLANTS OF TENNESSEE

Simon & Schuster (Australia)

Take this book with you on your next trip to the Bahamas or the Turks and Caicos Islands or keep it close to hand in your travel library. The Natural History of the Bahamas offers the most comprehensive coverage of the terrestrial and coastal flora and fauna on the islands of the Bahamas archipelago, as well as of the region's natural history and ecology. Readers will gain an appreciation for the importance of conserving the diverse lifeforms on these special Caribbean islands. A detailed introduction to the history, geology, and climate of the islands. Beautifully illustrated, with more than seven hundred color photographs showcasing the diverse plants, fungi, and animals found on the Bahamian Archipelago.

**Field Guide to the Reptiles of South-East Asia** Rowman & Littlefield

This fourth edition of the anthrax guidelines encompasses a systematic review of the extensive new scientific literature and relevant publications up to end 2007 including all the new information that emerged in the 3-4 years after the anthrax letter events. This updated edition provides information on the disease and its importance, its etiology and ecology, and offers guidance on the detection, diagnostic, epidemiology, disinfection and decontamination, treatment and prophylaxis procedures, as well as control and surveillance processes for anthrax in humans and animals. With two rounds of a rigorous peer-review process, it is a relevant source of information for the management of anthrax in humans and animals.

### LESSONS FROM ASIA AND AFRICA

CABI

Fresh Cuts: Arrangements with Flowers, Leaves, Buds & Branches is an exciting new look at the unexpected possibilities the plant world offers for beauty and enjoyment. It will change the way we approach flower arranging. The one hundred elegant photographs by John M. Hall and the charming, informative text by garden designer Edwina von Gal show that one's choices for natural decorative arrangements need not be limited to flowers. Rather, von Gal and Hall emphasize the intrinsic beauty of each part of the plant, including buds, stems, leaves, berries and fruit. In tune with the current trend toward minimalism in interior decorating, the arrangements featured in this book are appealingly spare and simple. Among the many inspired ideas are a gathering of delicate periwinkle, the flowers a perfect complement to the leaves; a tabletop arrangement of beautifully textured pods and seeds; the rich, red stems of rhubarb chard in a clear glass vase; and a single rose of Sharon in glorious full bloom. Von Gal's whimsical, anecdotal text offers facts, observations, and folklore, as well as practical guidance for the care and maintenance of the plants featured in her creative arrangements. Her provocative captions invite us to stop, take a closer look, and experience plants in ways we might not have thought of before--in vases or in their natural settings. Filled with novel, accessible ideas, Fresh Cuts also suggests that the enjoyable act of decorating one's home or office can be combined with a dedicated foraging expedition, a casual nature walk, or a spiritual lesson in understanding our own symbiotic connection to the world of plants.

*Processing, Properties and Applications* Bloomsbury Publishing

Whatever your climate, there is a suitable species of bamboo for your garden. More than 300 bamboos are described, from tropical and subtropical species to hardy species with information on size, native range, and landscape use.

**The Complete Guide to Edible Wild Plants** CIFOR

This book is not about construction, although you will learn about building codes and practices. It is not about tactics, although the information gained by knowing a floor plan will undoubtedly affect them. Instead, this book is designed to provide a quick and simple method of confidently determining floor plans by using outside architectural features. It assumes no knowledge of construction or tactics and is designed to be useful whether it is read cover to cover or occasionally referred to as a reference. It provides time-tested, tried and true principles that any

tactician can use to determine avenues of approach, observation and fields of fire, obstacles, and cover or concealment, not to mention where a suspect might be most vulnerable. Using this essential tool for quick and clear comprehension of tactical diagramming, even a novice tactical planner will learn to use windows, doors, vents and other clues to confidently determine interior features. After reading this book, it will be clear that the proverbial "glass house" is in the mind's eye!

### PURE AND APPLIED SCIENCE BOOKS, 1876-1982

John Wiley & Sons

This is the first comprehensive field guide dealing exclusively with the birds of this region. It covers all the species, including vagrants, found in Ecuador, Colombia, Venezuela, Aruba, Curaçao, Bonaire, Trinidad and Tobago, Guyana, Suriname and French Guiana. Over 2,300 species are accurately illustrated with a total of nearly 6,400 images. Concise caption text appears on the plates and distribution maps appear opposite the plates. This authoritative book will not only be an indispensable guide to the visiting birder, but also a vital tool for those engaged in work to conserve and study the avifauna of this region, which is of such importance to both the indigenous species and those which pass through on migration. A companion to Birds of Northern South America: An Identification Guide - Species Accounts Volume 1 and Volume2 available as a shrinkwrapped set: 0 7136 6026 0 £85

This is the first comprehensive identification guide dealing exclusively with the birds of this region. It covers all the species, including vagrants, found in Ecuador, Columbia, Venezuela, Aruba, Curaçao, Bonaire, Trinidad and Tobago, Guyana, Suriname and French Guiana. Over 2,300 species are described in depth in the text, describing geographical variation, identification, status, habitat, voice and taxonomy. This authoritative book will not only be an indispensable guide to the visiting birder, but also a vital tool for those engaged in work to conserve and study the avifauna of this region, which is of such importance to both the indigenous species and those which pass through on migration. A companion to Birds of Northern South America: An Identification Guide - Plates and Maps Volume 1 and Volume2 available as a shrinkwrapped set: 0 7136 6026 0 £85 'The best field guide ever produced.' Cage & Aviary Birds, June 2007 'An extremely impressive and very valuable contribution to the literature on neotropical birds and I would certainly recommend it to anyone interested in the region.' worldtwitch.com (January 2007)

### *Plates and Maps* Artisan Books

Discusses primate evolution, behavior, and classification, and provides detailed information and illustrations, arranged geographically, on every family and nearly three hundred species.

### [How to Determine Floor Plans from Outside Architectural Features](#) Timber Press (OR)

"Each year during the shoot season, we stand spellbound in our beautiful botanical garden, gazing in awe at the newly emerging shoots of tropical giant bamboos. They thrust the earth aside in great clods as they heave their mighty bulk from beneath the earth." The object of this book is to communicate a wealth of knowledge, both scientific and practical, to those with little knowledge of the fabulous clumping bamboos of the world. Few people seem to be aware of the existence of these clumping bamboos. Their experience and attitudes have been soured by the invasive running bamboos. The Western world is not yet taking clumping bamboos seriously. Most Asian countries treat this fastest growing, annually renewable resource with great reverence. Bamboo feeds them, houses them, graces and shades their environment. It is used to make their musical instruments, cooking and eating utensils, furniture, hunting weapons, and ceremonial artifacts. It even provides the reinforcement for their concrete. Bamboo provides their carrying and storage baskets, lamps and lampshades, ropes and strings, roof tiles and hats, and has hundreds of other practical and spiritual uses. "Bamboo World" distils simple practical advice on using bamboo for a wealth of applications. It draws on both traditional village technology and modern scientific research, accumulated over the author's many years of travel, practice, research, growing, and association with village communities and scientists from many countries.

### *Anthrax in Humans and Animals* Cengage Learning

The ideal reference for students of botany and horticulture, gardeners, and naturalists. The diverse external shapes and structures that make up flowering plants can be bewildering and even daunting, as can the terminology used to describe them. An understanding of plant form—plant morphology—is essential to appreciating the wonders of the plant world and to the study of botany and horticulture at every level. In this ingeniously designed volume, the complex subject becomes both accessible and manageable. The first part of the book describes and clearly illustrates the major plant structures that can be seen with the naked eye or a hand lens. The second part focuses on how plants grow: bud development, the growth of reproductive organs, leaf arrangement, branching patterns, and the accumulation and loss of structures. Aimed at students of botany and horticulture, enthusiastic gardeners, and amateur naturalists, it functions as an illustrated dictionary, a basic course in plant morphology, and an intriguing and enlightening book to dip into.

### *An Illustrated Guide to the Identification of the Mosquitoes of Hong Kong* Skyhorse Publishing, Inc.

This book summarizes many of the recent developments in the area of bamboo composites with emphasis on new challenges for the synthesis characterization, properties of bamboo composites and practical applications. The book provides an update of all the important areas of (synthesis, processing, properties and application) bamboo fibers and its composites in a comprehensive manner. The chapters contributed by leading researchers from industry, academy, government and private research institutions across the globe benefit academics, researchers, scientists, engineers and students in the field of natural fiber composites.

### **Collins Illustrated Guide to Fujian** Balogh Scientific Books

A catalog of the great variety of uses to which the lightweight yet sturdy plant has been put is accompanied by a guide to its cultivation, harvesting, folklore, and history.

DIVLifelong gardener Judy Lowe gives you the knowledge to make the right cut the first time./divDIV /divDIV&#x2013;Pruning panic&#x2013; is an all-too-familiar feeling among even experienced gardeners, but it&#x2013;s especially prevalent among those of us who are new to the practice. In

Pruning: An Illustrated Guide, award-winning gardening writer Judy Lowe imparts over two decades of expertise, focusing on the most common backyard pruning needs for the most commonly grown landscape plants. From trees and shrubs to hydrangeas, azaleas, roses, and other perennials, Lowe takes an in-depth approach to all the pruning essentials. Throughout the book, her advice is accompanied by brilliantly detailed step-by-step line drawings that clearly demonstrate where and how to make precise, effective cuts. Lowe removes all intimidation from the pruning process: beyond the craft itself, you&#x2013;ll gain an understanding of the basic science behind plant growth, why plants need pruning, when they&#x2013;ll need it, and how pruning techniques can vary between plant species. So the next time you pick up a pruning saw or a pair of loppers, panic will be the furthest thing from your mind&#x2013;and from your garden./div

### *Bamboo for Gardens* Timber Press (OR)

In a situation where survival is at stake, plants can provide crucial food and medicine. Their safe usage requires absolutely positive identification, knowing how to prepare them for eating, and a solid awareness of any dangerous properties they might have. Familiarity with the botanical structures of plants and information on where they grow will make them easier to locate and identify. THE ILLUSTRATED GUIDE TO WILD EDIBLE PLANTS describes the physical characteristics, habitat and distribution, and edible parts of wild plants. With color photography throughout, this guide facilitates the identification of these plants. Originally intended for Army use, this book serves as a survival aid for civilians as well. Anyone interested in the outdoors, botany, or even in unusual sources of nutrition will find this an indispensable resource.

### **Bamboo World** Rowman & Littlefield

Kitchen Pro Series: Guide to Fish and Seafood Identification, Fabrication, and Utilization is the definitive guide to purchasing and fabricating fish and shellfish for professional chefs, foodservice personnel, culinarians, and food enthusiasts. Part of the CIA's new Kitchen Pro Series focusing on kitchen preparation skills, this invaluable resource features helpful storage information, basic preparation methods, and recipes that will allow professional and home chefs to fabricate well-prepared fish and seafood. Throughout this lavishly illustrated text, The Culinary Institute of America's Chef Mark Ainsworth offers readers a satisfying alternative to meat by educating them about how to purchase and prepare healthy and delicious fish and seafood dishes. An identification guide illustrated with line drawings, with descriptions and notes on distribution, ecology, uses and propagation - a very useful handbook for gardeners and nurserymen. Published for the Overseas Development Administration and the Forestry Research Programme, University of Oxford.

#### [Turn-of-the-Century Farm Tools and Implements](#) World Health Organization

With reference to Kerala, India.

#### *An Illustrated Guide* Random House (NY)

Bamboos are extraordinary in the ability to transform a garden, adapt to inhospitable surroundings, survive with little care and, most of all, surprise and delight the people who view them. Too long the exclusive pleasure of those with tropical and subtropical gardens, this hand-picked selection allows gardeners in cooler climes to experience the wonder and infinite variety of these magical plants.Besieged by winter wet, summer drought and bitter, drying winds, Paul Whittaker's garden has been a rigorous testing ground. In the first part of the book his compelling

anecdotes, experiences and case histories illuminate how bamboos perform in different places, draw attention to their idiosyncratic nature, and highlight their geographical origins. A further section describes the bamboo's unique physical structure and growing habits. These fascinating insights give you the knowledge you need to choose the right bamboo for your site and grow it successfully.At the heart of the book are detailed plant descriptions that join with striking photographs and evocative illustrations to highlight each plant's characteristics. Culms available in all the colors of the rainbow may also be striped, grooved, wrinkled or knobbled. Leaves range from glaucous needles to huge plates of deep green with striking variegations. There are bamboos perfect for creating shady groves and hedges, and others that deserve stand-alone treatment as specimen plants. Here you will find everything from the elegant, willowy "Fargesia rufa to the bold, tropical looks of "Sasa palamata f. "nebulosa. Using bamboos to best effect in the garden, propagation, aftercare and their resilience to pests and diseases complete the guidancefor gardeners.The distillation of years of hands-on growing experience, this is the ultimate bamboo reference book for cool-climate gardeners. Enthusiasts will delight in the variety of new possibilities for their collection and gardeners everywhere will be captivated by the charm bamboos bring to countless different garden situations.

### **Manual of Seeds of Forest Trees, Bamboos, and Rattans** Cornell University Press

The product of twenty-five years of planning, research, and writing, Guide to the Vascular Plants of Tennessee is the most comprehensive, detailed, and up-to-date resource of its kind for the flora of the Volunteer State, home to nearly 2,900 documented taxa. Not since Augustin Gattinger's 1901 Flora of Tennessee and a Philosophy of Botany has a work of this scope been attempted. The team of editors, authors, and contributors not only provide keys for identifying the major groups, families, genera, species, and lesser taxa known to be native or naturalized within the state—with supporting information about distribution, frequency of occurrence, conservation status, and more—but they also offer a plethora of descriptive information about the state's physical environment and vegetation, along with a summary of its rich botanical history, dating back to the earliest Native American inhabitants. Other features of the book include a comprehensive glossary of botanical terms and an array of line drawings that illustrate the identifying characteristics of vascular plants, from leaf shape and surface features to floral morphology and fruit types. Finally, the book's extensive keys are indexed by families, scientific names, and common names. The result is a user-friendly work that researchers, students, environmentalists, foresters, conservationists, and indeed anyone interested in Tennessee and its botanical legacy and resources will value for years to come. Edward W. Chester is professor emeritus of biology at Austin Peay State University, where he taught botany and curated the herbarium for more than forty-five years. B. Eugene Wofford is director of the University of Tennessee Herbarium and coauthor (with Professor Chester) of Guide to the Trees, Shrubs, and Woody Vines of Tennessee. Joey Shaw is associate professor of biological and environmental sciences at the University of Tennessee at Chattanooga. Dwayne Estes is associate professor of biology and curator of the herbarium at Austin Peay State University. David H. Webb is a retired biologist from the Tennessee Valley Authority. In addition, more than 20 experts from throughout the country contributed family or genera treatments, including Andrea Shea Bishop (rare species botanist, Tennessee Department of Environment and Conservation), Claude Bailey (associate professor, Jackson State Community College), Hal R. DeSelm (professor emeritus, University of Tennessee), Dennis Horn (amateur botanist and wildflower photographer, retired engineer), Chris Fleming (senior project scientist, BDY Environmental), Aaron Floden (graduate student, University of Tennessee), William H. Martin (professor emeritus, Eastern Kentucky University and former commissioner of Kentucky's Department of Natural Resources), Mary Patten Priestley (curator of the herbarium, The University of the South), and Edward Schilling (professor, University of Tennessee).
