In this first history of the military ambulance, historian John S. Haller Jr. documents the development of medical technologies for treating and transporting wounded soldiers on the battlefield. Noting that the word ambulance has been used to refer to both a mobile medical support system and a mode of transport, Haller takes readers back to the origins of the modern ambulance, covering their evolution in depth from the late eighteenth century through World War I. The rising nationalism, economic and imperial competition, and military alliances and arms races of the nineteenth and early twentieth centuries figure prominently in this history of the military ambulance, which focuses mainly on British and American technological advancements. Beginning with

changes introduced by Dominique-Jean Larrey during the Napoleonic Wars, the book traces the organizational and technological challenges faced by opposing armies in the Crimean War, the American Civil War, the Franco-Prussian War, and the Philippines Insurrection, then climaxes with the trench warfare that defined World War I. The operative word is "challenges" of medical care and evacuation because while some things learned in a conflict are carried into the next, too often, the spasms of war force its participants to repeat the errors of the past before acquiring much needed insight. More than a history of medical evacuation systems and vehicles, this exhaustively researched and richly illustrated volume tells a fascinating story, giving readers a unique perspective of the changing nature of warfare in the nineteenth and early twentieth centuries.

Mapping Racial Literacies University Press of Colorado

Early college classrooms provide essential opportunities for students to grapple and contend with the racial geographies that shape their lives. Based on a mixed methods study of students' writing in a first-year-writing course themed around racial identities and language varieties at St. John's University, Mapping Racial Literacies shows college student writing that directly confronts lived experiences of segregation—and, overwhelmingly, of resegregation. This textual ethnography embeds early college students' writing in deep historical and theoretical contexts and

looks for new ways that their writing contributes to and reshapes contemporary understandings of how US and global citizens are thinking about race. The book is a teaching narrative, tracing a teaching journey that considers student writing not only in the moments it is assigned but also in continual revisions of the course, making it a useful tool in helping college-age students see, explore, and articulate the role of race in determining their life experiences and opportunities. Sophie Bell's work narrates the experiences of a white teacher making mistakes in teaching about race and moving forward through those mistakes, considering that process valuable and, in fact, necessary. Providing a model for future scholars on how to carve out a pedagogically responsive identity as a teacher, *Mapping Racial Literacies* contributes to the scholarship on race and writing pedagogy and encourages teachers of early college classes to bring these issues front and center on the page, in the classroom, and on campus.

In an ideal world, the laws of Congress--known as federal statutes--would always be clearly worded and easily understood by the judges tasked with interpreting them. But many laws feature ambiguous or even contradictory wording. How, then, should judges divine their meaning? Should they stick only to the text? To what degree, if any, should they consult aids beyond the statutes themselves? Are the purposes of lawmakers in writing law relevant? Some judges, such as Supreme Court Justice Antonin Scalia, believe courts should look to the language of the statute and virtually nothing else. Chief Judge Robert A. Katzmann of the U.S. Court of Appeals for the Second Circuit respectfully disagrees. In *Judging Statutes*, Katzmann, who is a trained political scientist as well as a judge, argues that our constitutional system charges Congress with enacting laws; therefore, how Congress makes its purposes known through both the laws themselves and reliable accompanying materials should be respected. He looks at how the American government works, including how laws come to be and how various agencies construe legislation. He then explains the judicial process of interpreting and applying these laws through the demonstration of two interpretative approaches, purposivism (focusing on the purpose of a law) and textualism (focusing solely on the text of the written law). Katzmann draws from his experience to show how this process plays out in the real world, and concludes with some suggestions to promote understanding between the courts and Congress. When courts interpret the laws of Congress, they should be mindful of how Congress actually functions, how lawmakers signal the meaning of statutes, and what those

legislators expect of courts construing their laws. The legislative record behind a law is in truth part of its foundation, and therefore merits consideration.
