 Chapter 18: This chapter presents how the war was experienced on the home front in Japan, and how that experience is remembered today. Taking an elongated periodization of the Second World War from the Manchurian Incident of 1931 to the end of the Tokyo Trials in 1948, it discusses the Japanese war experience in three main phases: early victories (to 1942); the tide turns (to 1945); and repatriations and reckonings (to 1948). The key ways in which the war affected the lives of civilians will be discussed, including war work, conscription, settler life, civilians in the battle zone (Okinawa, Karafuto), air raids, repatriation, and the struggle for survival post-defeat. By continuing the discussion up to the end of the Tokyo Trials, the chapter presents the mechanisms by which narratives of Japanese civilian victimhood became so prominent in Japanese memories of the conflict by discussing how Japanese war guilt was addressed at the Trials and beyond. Finally, the chapter discusses the contemporary representation of the civilian experience in Japanese war and peace museums.

 This is the milestone official comprehensive history of the United States Air Force with compelling stories about America's airmen and their aircraft. This document, Volume II, picks up the narrative at the Korean War, takes it through the War in Southeast Asia, the Gulf War, to the drawdown following the end of the Cold War. Part IV: A Decade of Deterrence, 1950-1960 * Chapter 13 - The Air War over Korea * Chapter 14 - The Emergence of the Strategic Air Command * Chapter 15 - The Air Force as an Institution * Chapter 16 - Containing Communism * Part V: The War in Southeast Asia, 1960-1975 * Chapter 17 - Flexible Response: Evolution or Revolution? * Chapter 18 - The Air Force and Operations Short of War * Chapter 19 - The War in Southeast Asia, 1961-1968 * Chapter 20 - Vietnamization and Withdrawal, 1968-1975 * Part VI: Regrouping after Vietnam, 1975-1982 * Chapter 21 - Modernizing after Vietnam * Chapter 22 - Carrying Out National Policy * Part VII: The Post-Cold War Era, 1982-1997 * Chapter 23 - Peace is not Always Peaceful * Chapter 24 - From the Deserts to the Mountains * Chapter 25 - Metamorphosis: The Air Force Approaches the Next Century More than any other military organization, the U.S. Air Force searches out and listens to the experience history offers. Few problems arise from a void or occur without precedent; and while every challenge possesses its unique aspects, the perspective of time and the careful consideration of what already has succeeded or failed inevitably improves the effectiveness of today's decisions and the quality of planning for the future. History is therefore important to the Air Force; the recorded past is a foundation for doctrine, policy, strategy, tactics, equipment development, organization, force structure, and virtually every other element of air power. This volume, published in commemoration of the fiftieth anniversary of the Air Force as an independent service, is especially valuable. Not only should it both inspire and enlighten the members of the Air Force, it should also serve as a convenient source of information for those outside the service who are interested in the origin, growth, evolution and application of American air power. Throughout its first century, military aviation helped advance the interests of the United States. From a curiosity, fragile and of uncertain value, the warplane has become a devastating weapon. Moreover, ballistic missiles and surveillance satellites have joined aircraft in this aerial array. In these volumes, we

try to describe and analyze, in the context of national policy and international rivalries, the evolution of land-based air power since the United States Army in 1907 established an Aeronautical Division responsible to the Chief Signal Officer. This work, in addition to commemorating the Air Force's fiftieth anniversary, also commemorates almost one hundred years of progress in the design and use of aerial weaponry. By placing airmen and their machines in an appropriate context, it provides a clearer understanding of the central role of the Air Force in current American defense policy. Early in the conceptualization of this work, we decided that a collaborative effort would make the best use of whatever special skills or knowledge each of us might possess. We knew, however, that successful collaboration requires a plan, and the blueprint was the work of Warren A. Trest, then the chief of the Histories Division, Office of Air Force History. He devised a basic outline for the book, and after his transfer elsewhere in the Air Force history program, Bernard C. Nalty saw the design through to its completion. Under the general guidance of these two, we wrote, reviewed, and revised each chapter. A panel of historians and military officers reviewed the manuscript, which then underwent the final revisions that these distinguished individuals suggested.

The idea of a preventive vaccine against cancer has been extremely attractive because of the immune system's ability to develop specific and long-lasting immunological memory. Dendritic cells, which present antigen to T cells, sit at a critical point in the activation of the immune system because they are able to activate both B cells and T cells. The first DC vaccines were tested in humans in 1998. In 2010 the first DC vaccine was FDA approved for treatment of patients with advanced prostate cancer. This vaccine showed a survival advantage of 4.3 months. This vaccine was extremely safe, with low rates of adverse events. In this chapter we discuss the history of DC vaccines, the development of DC vaccines including Sipuleucel-T, and the future directions of DC vaccines. This includes strategies for combining DC vaccines with other therapies, including hormone therapy, additional immunotherapy, and

chemotherapy.

Considering the difficulty of clinical development for Alzheimer's Disease (AD), understanding each country's specific situation is an important first step in reducing the operational burden on clinical trials while maintaining the quality of the study. In this chapter, the long history of clinical development for AD in Japan is introduced. There has been a lot of experience in Japan of AD clinical development from the time of developing donepezil to the current global development of AD disease-modifying drugs. However, this experience has not always been a success story and has often been the cause of much frustration, such as the failure of Phase III studies, high regulatory requirements, development and implementation of neuropsychological tests, influence of ethnic factors, etc. However, all of these points provide us with a good source from which we can learn about the challenges of the clinical trials and discuss how to strengthen the quality and efficiency. It's important to take advantage of this experience for

future success in the clinical development of AD, especially in emerging markets.

The Frontline presents a selection of essays drawn together for the first time to form a companion volume to Serhii Plokhyy's *The Gates of Europe* and *Chernobyl*. Here he expands upon his analysis in earlier works of key events in Ukrainian history, including Ukraine's complex relations with Russia and the

West, the burden of tragedies such as the Holodomor and World War II, the impact of the Chernobyl nuclear disaster, and Ukraine's contribution to the collapse of the Soviet Union. Juxtaposing Ukraine's history to the contemporary politics of memory, this volume provides a multidimensional image of a country that continues to make headlines around the world. Eloquent in style and comprehensive in approach, the essays collected here reveal the roots of the ongoing political, cultural, and military conflict in Ukraine, the largest country in Europe.

 Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful.

Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

 The fifth volume of *A History of the Book in America* addresses the economic, social, and cultural shifts affecting print culture from World War II to the present. During this period factors such as the expansion of government, the growth of higher education, the climate of the Cold War, globalization, and the development of multimedia and digital technologies influenced the patterns of consolidation and diversification established earlier. The

thirty-three contributors to the volume explore the evolution of the publishing industry and the business of bookselling. The histories of government publishing, law and policy, the periodical press, literary criticism, and reading--in settings such as schools, libraries, book clubs, self-help programs, and collectors' societies--receive imaginative scrutiny as well. The *Enduring Book* demonstrates that the corporate consolidations of the last half-century have left space for the independent publisher, that multiplicity continues to define American print culture, and that even in the digital age, the book endures. The Sound of Light is a sweeping overview of the history of gospel music. Powerful and incisive, it traces contemporary Christianity and Christian music to the 16th century and the Protestant Reformation after examining music in the Bible and early church music. From the psalms of the early Puritans through the hymns of human composure of Isaac Watts and the social activism of the Wesleys, gospel music was established in 18th century America. With the camp meeting songs of the Kentucky Revival, the spirituals that came from the slave culture, and the hymns from the great revival after the Civil War, gospel music advanced through the 19th century. The 20th century brought recording technology and electronic media to the table. Gospel music has developed with Christian revivals and the history of American gospel music is the history of Christianity in America. Gospel music reflects the American spirit of freedom and the free market as a Christian culture emerges in the 20th century, providing a spiritual as well as economic foundation. The Sound of Light presents gospel music as part of the history of contemporary Christianity. It is a work broad in scope that defines a music essential to understanding American culture as well as American music in the 20th century. Don Cusic is the author of ten books, including the biography Eddy Arnold: I'll Hold You in My Heart and an encyclopedia of cowboys, Cowboys and the Wild West: An A-Z Guide

from the Chisholm Trail to the Silver Screen. He joined the faculty at Middle Tennessee State University in 1982, teaching courses in the music business. He earned a Masters and Doctorate in Literature from MTSU. Since August of 1994, Cusic has been Professor of Music Business at Belmont University.
