Content related to the NCLEX-PN test plan is emphasized throughout the text, including health promotion, nutrition, legal/ethical issues, HIPAA, and prevention of medication/medical errors. Separate chapters on common, high-profile disorders (including hypertension, diabetes,

UNIQUE! In-depth pharmacology coverage includes: the Pharmacology Tutorial covering drug classifications, how drugs work, and nursing responsibilities; Pharmacology Capsules boxes providing medication information, precautions for use, interactions, and

side/adverse effects; and Pharmacology and Medications tables including classification, use/action, side/adverse effects, and nursing interventions. A separate unit on gerontologic nursing provides comprehensive coverage of the care of the older adult and related disorders. No other LPN/LVN med-surg text offers as much coverage of this primary patient group. Diagnostic Tests and Procedures tables offer quick reference to MRI, CT, Doppler flow, lumbar puncture tests for neurologic disorders, and much more. Health Promotion Considerations boxes highlight timely wellness and disease prevention topics.

Patient Teaching Plans provide bulleted lists of nursing instructions for patients, stressing the role and responsibility of the LPN/LVN to reinforce patient education. Nutrition Considerations boxes are spotlighted at appropriate points throughout the text to emphasize the role that nutrition plays in disease and nursing care. Nursing care plans reinforce the nursing process and focus on critical thinking. Cultural Considerations boxes discuss the importance of providing culturally-competent care related to various clinical situations. Put on Your Thinking Cap boxes allow you to pause and consider the practical implications of what you have just read. Get Ready for the NCLEX-

PN Examination! sections at the end of chapters include key points, review questions, and case studies that address the various NCLEX Client Needs categories. NEW! Continued emphasis on evidence-based practice and the most current research findings include specific examples of how scientific evidence can justify and support patient care. NEW!
