Creating Value with Knowledge

IGI Global
As knowledge economies become increasingly important around the world, it is essential that organizations are able to transform their knowledge into a competitive advantage. This textbook offers an interdisciplinary approach to knowledge management written specifically for postgraduate students in business and

management schools. Knowledge Management presents classic and advanced concepts, models and frameworks using a clear logical structure, which covers building knowledge competence, the knowledge lifecycle, and integration of knowledge management with business decision making. An overall framework illustrates links between chapters and ensures readers can gain a body of actionable knowledge rather than learning isolated, uncontextualized

topics. Based on cutting-edge research findings and covering the most advanced IT and IS technologies, this book emphasises the need for knowledge management to span boundaries across organizations, supply chains and partnerships, rather than being limited to individual learning and sharing within businesses. Knowledge Management is international in scope and includes real world case studies and role play scenarios to show how theories are applied in practice, and "think back"

and "critique discussion" questions to encourage reflective learning and critical thinking. This indispensable text provides a dynamic picture of the evolution of knowledge management and demonstrates its full potential to enable better business decisions. Accompanying online resources include PowerPoint slides for lecturers and exercise questions for students.

departure from traditional strategic management concepts and practice. Designed for both advanced students and business managers, it presents a unique combination of new strategic management theory, carefully selected strategic management articles by prominent scholars such as Gary Hamel, Michael Porter, Peter Senge, and real-world case studies. On top of this, the authors link powerful new benchmarks in strategic management thinking, including the

concepts of Socio-Cultural Network Dynamics, Systemic Scorecards, and Customer Knowledge Management with practical business challenges and solutions of blue-chip companies with a superior performance (Lafite-Rothschild, Who's Who, Holcim, BRL Hardy, Kuoni BTI, Deutsche Bank, Unisys, Novartis). *How to Make Knowledge Sharing Work* McGraw-Hill Companies Knowledge and Practice in Business and Organisations contributes

to scholarly understanding of knowledge and practice, mapping the conceptual terrain, providing a critical review of debates in the field and setting out key theoretical perspectives. Knowledge and practice are explored in a range of organisational and policy settings through six context-specific discussions. The collection helps shape the field, identify areas for future research inquiry, and suggest implications for practitioners. The range of sites of inquiry

represented in the book (e.g. craft working, accounting, public sector organisations, creative industries, health care, and so on) make the book distinctive, enabling the reader to connect debates and ideas from across a range of sectors and disciplines. The book charts different currents of debate which have hitherto tended to remain unconnected. In one accessible volume, this book provides an excellent introduction to a set of concepts that have animated scholarly

conversations across a range of disciplines and provides cases and examples of practices from beyond any one particular sector. SAGE

A handbook for the discerning IT professional, this volume provides easy-to-follow guidelines on the business knowledge needed to

forgo a career in the exciting world of investment management. Business Knowledge for IT in Trading and Exchanges IGI Global Knowledge Intensive Business Services (KIBS) are becoming more and more relevant both for their innovative content and as innovation boosters for manufacturing firms and, with this scenario in mind, this book first offers an in-depth analysis of what innovation in KIBS is and its performance outcomes, and then

synthesizes what we know about KIBS firms' innovation models, as well as their specific peculiarities and limitations. This book examines the recent trends in innovation, service design and development in KIBS, starting from a review of the extant literature, explaining the role and specific traits of innovation in KIBS. Then, it progresses our knowledge about KIBS and about how new technologies are offering unique opportunities to

use and share their knowledge, within and across boundaries. The book also includes several cases that show how, at the micro level, firms can effectively design their services and boost their innovation performance, by overcoming some of the traditional limits of innovation in services. While KIBS literature traditionally emphasizes that innovative and performing KIBS firms rely on tight client-provider interactions with service customization, recent research suggests that

alternative modes of innovation are viable for performing KIBS firms: KIBS firms can develop mass customization strategies, ease interactions with clients via ICT interfaces and leverage on focused collaborations with expert clients. Particularly, the digitalization and ICT technologies are fostering platform and modular architectural designs of KIBS, as in the software and web design services. The book seeks a broader understanding of innovation in KIBS in the

digital era and will be an essential guide for both academics and practitioners interested in KIBS innovation and design.

Provocative and reflective, this volume on the notion of knowledge and innovation in the business industry provides readers with a holistic approach to the subject of 'knowledge'. Structuring their arguments around four case studies of innovation within four entirely

different contexts, Håkansson and Waluszewski invite the business-minded reader to consider the costs of adopting new knowledge and innovation within a business setting. This book: questions the long-held assumption that new knowledge and innovation are universally advantageous follows the tremor of an innovation as new knowledge

reverberates through, or is dampened by the larger economic community - including cultural structures, the industrial standards and the foundational assumptions that rule a particular economic domain focuses in particular on the interfaces where the innovative agent connects to its customers, suppliers and competitors.
