It's a summer internship. Never mind that the owners are hot. Never mind that there are three of them. Never mind that they are twice her age. Never mind that they have a secret "play" room in the basement. Never mind that she's never been more intrigued in her life. She only has three months. No matter how deeply she gets involved, she can't stay...

Over the past ten years there has been a massive growth in call centres worldwide. These centres are said to represent the most dynamic growth area in white-collar employment internationally since the mid 1990s. Yet the footloose and global nature of the industry means that jobs will always be susceptible to outsourced operations, ICT developments, public sector subsidization of business restructuring and re-location, and cheaper operations elsewhere. This book conducts a thorough analysis of this modern phenomenon.

An asymmetric norm is a positive definite sublinear functional  $p$  on a real vector space  $X$ . The topology generated by the asymmetric norm  $p$  is translation invariant so that the addition is continuous, but the asymmetry of the norm implies that the multiplication by scalars is continuous only when restricted to non-negative entries in the first argument. The asymmetric dual of  $X$ , meaning the set of all real-valued upper semi-continuous linear functionals on  $X$ , is merely a convex cone in the vector space of all linear functionals on  $X$ . In spite of these differences, many results from classical functional analysis have their counterparts in the asymmetric case, by taking care of the interplay between the asymmetric norm  $p$  and its conjugate. Among the positive results one can mention: Hahn-Banach type theorems and separation results for convex sets, Krein-Milman type theorems, analogs of the fundamental principles - open mapping, closed graph and uniform boundedness theorems - an analog of the Schauder's theorem on the compactness of the conjugate mapping. Applications are given to best approximation problems and, as relevant examples, one considers normed lattices equipped with asymmetric norms and spaces of semi-Lipschitz functions on quasi-metric spaces. Since the basic topological tools come from quasi-metric spaces and quasi-uniform spaces, the first chapter of the book contains a detailed presentation of some basic results from the theory of these spaces. The focus is on results which are most used in functional analysis - completeness, compactness and Baire category - which drastically differ from those in metric or uniform spaces. The book is fairly self-contained, the prerequisites being the acquaintance with the basic results in topology and functional analysis, so it may be used for an introduction to the subject. Since new results, in the focus of current research, are also included, researchers in the area can use it as a reference text.

**Three Case Studies** University of Chicago Press

Presenting the first critical analysis of Carl Schmitt's *The Nomos of the Earth* and how it relates to the epochal changes in the international system that have risen from the collapse of the 'Westphalian' international order. There is an emerging recognition in political theory circles that core issues, such as order, social justice, rights, need to be studied in their global context. Schmitt's international political thought provides a stepping stone in these related paths, offering an alternative history of international relations, of the genesis, achievements and demise of the 'Westphalian system.' Writing at a time when he believed that the spatial, political and legal order—the nomos of the earth—had collapsed, he highlighted the advent of the modern state as the vehicle of secularization, tracing how this interstate order was able to limit and 'rationalize and humanize' war. Providing a large number of case studies including: global terrorism, humanitarian intervention and US hegemony, this book will give further impetus to, and expand, the nascent debate on the significance of Schmitt's legal and political thought for international politics. The *International Political Thought of Carl Schmitt* will be of interest to students and scholars of international relations, law and history.

**Designing and Evaluating Usable Technology in Industrial Research** Dorset House Publishing Company, Incorporated

This book joins and integrates ceramics and ceramic-based materials in various sectors of technology. A major imperative is to extract scientific information on joining and integration response of real, as well as model, material systems currently in a developmental stage. This book envisions integration in its broadest sense as a fundamental enabling technology at multiple length scales that span the macro, millimeter, micrometer and nanometer ranges. Consequently, the book addresses integration issues in such diverse areas as space power and propulsion, thermoelectric

power generation, solar energy, micro-electro-mechanical systems (MEMS), solid oxide fuel cells (SOFC), multi-chip modules, prosthetic devices, and implanted biosensors and stimulators. The engineering challenge of designing and manufacturing complex structural, functional, and smart components and devices for the above applications from smaller, geometrically simpler units requires innovative development of new integration technology and skillful adaptation of existing technology.

This book is about HCI research in an industrial research setting. It is based on the experiences of two researchers at the IBM T. J. Watson Research Center. Over the last two decades, Drs. John and Clare-Marie Karat have conducted HCI research to create innovative usable technology for users across a variety of domains. We begin the book by introducing the reader to the context of industrial research as well as a set of common themes or guidelines to consider in conducting HCI research in practice. Then case study examples of HCI approaches to the design and evaluation of usable solutions for people are presented and discussed in three domain areas: - item Conversational speech technologies, - item Personalization in eCommerce, and - item Security and privacy policy management technologies. In each of the case studies, the authors illustrate and discuss examples of HCI approaches to design and evaluation that worked well and those that did not. They discuss what was learned over time about different HCI methods in practice, and changes that were made to the HCI tools used over time. The Karats discuss trade-offs and issues related to time, resources, and money and the value derived from different HCI methods in practice. These decisions are ones that need to be made regularly in the industrial sector. Similarities and differences with the types of decisions made in this regard in academia will be discussed. The authors then use the context of the three case studies in the three research domains to draw insights and conclusions about the themes that were introduced in the beginning of the book. The Karats conclude with their perspective about the future of HCI industrial research. Table of Contents: Introduction: Themes and Structure of the Book / Case Study 1: Conversational Speech Technologies: Automatic Speech Recognition (ASR) / Case Study 2: Personalization in eCommerce / Case Study 3: Security and Privacy Policy Management Technologies / Insights and Conclusions / The Future of Industrial HCI Research

Love and loyalty, hatred and revenge, fear, deprivation, and political ambition: these are the motives which thrust the characters portrayed in these three Sophoclean masterpieces on to their collision course with catastrophe. Recognized in his own day as perhaps the greatest of the Greek tragedians, Sophocles' reputation has remained undimmed for two and a half thousand years. His greatest innovation in the tragic medium was his development of a central tragic figure, faced with a test of will and character, risking obloquy and death rather than compromise his or her principles: it is striking that Antigone and Electra both have a woman as their intransigent 'hero'. Antigone dies rather neglect her duty to her family, Oedipus' determination to save his city results in the horrific discovery that he has committed both incest and parricide, and Electra's unremitting anger at her mother and her lover keeps her in servitude and despair. These vivid translations combine elegance and modernity, and are remarkable for their lucidity and accuracy. Their sonorous diction, economy, and sensitivity to the varied metres and modes of the original musical delivery make them equally suitable for reading or theatrical performance. ABOUT THE SERIES: For over 100 years Oxford World's Classics has made available the widest range of literature from around the globe. Each affordable volume reflects Oxford's commitment to scholarship, providing the most accurate text plus a wealth of other valuable features, including expert introductions by leading authorities, helpful notes to clarify the text, up-to-date bibliographies for further study, and much more.

From one of our most widely read, award-winning journalists - comes the powerful, unputdownable story of the very human cost of a global pandemic of staggering scope and scale. It is essential reading for our times. In 28, Stephanie Nolen, the Globe and Mail's Africa Bureau Chief, puts a human face to the crisis created by HIV-AIDS in Africa. She has achieved, in this amazing book, something extraordinary: she writes with a power, understanding and simplicity that makes us listen, makes us understand and care. Through riveting anecdotal stories - one for each of the million people living with HIV-AIDS in Africa - Nolen explores the effects of an epidemic that well exceeds the Black Plague in magnitude. It is a calamity that is unfolding just a 747-flight away, and one that will take the lives of these 28 million without the help of massive, immediate intervention on an unprecedented scale. 28 is a timely, transformative, thoroughly accessible book that shows us definitively why we continue to ignore the growth of HIV-AIDS in Africa only at our peril and at an intolerable moral cost. 28's stories are much more than a record of the suffering and loss in 28 emblematic lives. Here we meet women and men fighting vigorously on the frontlines of disease: Tigist Haile Michael, a smart, shy 14-year-old Ethiopian orphan fending for herself and her baby brother on the slum streets of Addis Ababa; Alice Kadzanja, an HIV-positive nurse in Malawi, where one in six adults has the virus, and where the average adult's life expectancy is 36; and Zackie Achmat, the hero of South Africa's politically fragmented battle against HIV-AIDS. 28 also tells us how the virus works, spreads and, ultimately, kills. It explains the connection of HIV-AIDS to conflict, famine and the collapse of states; shows us how easily treatment works for those lucky enough to get it and details the struggles of those who fight to stay alive with little support. It makes vivid the strong, desperate people doing all they can, and maintaining courage, dignity and hope against insurmountable odds. It is - in its humanity, beauty and sorrow - a call to action for all who read it.
