Deep within galaxies like the Milky Way,

astronomers have found a fascinating

legacy of Einstein's general theory of

relativity: supermassive black holes.

Connected to the evolution of the galaxies

that contain these black holes, galactic

nuclei are the sites of uniquely energetic

events, including quasars, stellar tidal

disruptions, and the generation of

gravitational waves. This textbook is the

first comprehensive introduction to

dynamical processes occurring in the

vicinity of supermassive black holes in

their galactic environment. Filling a critical

gap, it is an authoritative resource for

astrophysics and physics graduate

students, and researchers focusing on galactic nuclei, the astrophysics of massive black holes, galactic dynamics, and gravitational wave detection. It is an ideal text for an advanced graduate-level course on galactic nuclei and as supplementary reading in graduate-level courses on high-energy astrophysics and galactic dynamics. David Merritt summarizes the theoretical work of the last three decades on the evolution of galactic nuclei, the formation of massive black holes, and the interaction between black holes and stars. He explores in depth such important topics as observations of galactic nuclei, dynamical models, weighing black holes, motion near supermassive black holes, evolution of nuclei due to gravitational encounters, loss cone theory, and binary supermassive black holes. Self-contained and up-to-date, the textbook includes a summary of the current literature and previously unpublished work by the author. For researchers working on active galactic nuclei, galaxy evolution, and the generation of gravitational waves, this book will be an essential resource.

Shadows Reel Princeton University Press International Accounting and Transnational Decisions explores a wide range of significant international accounting issues with special reference to the comparative development of national systems of accounting, international accounting standards, transnational financial reporting issues and financial planning and control in the multinational corporation. The book is organized into five parts. Part I discusses the international dimensions of accounting including both the financial reporting and managerial decision-making perspectives. The second part is concerned with the comparative international aspects of accounting. The Part III presents developments and questions relating to international accounting standards. The fourth part considers a number of selected transnational financial reporting issues of concern both to managers and financial statement users. The last part takes a managerial perspective in its coverage of important problems of transnational financial decision making and control. Accountants and students of accounting will find the book useful.

List of English-translated Chinese standards [GB] Cengage Learning The EN ISO 13849-1 standard, "Safety of machinery – Safety-related parts of control systems", contains provisions governing the design of such parts. This report is an update of BGIA Report 2/2008e of the same name. It describes the essential

subject-matter of the standard in its third, revised 2015 edition, and explains its application with reference to numerous examples from the fields of electromechanics, fluidics, electronics and programmable electronics, including control systems employing mixed technologies. The standard is placed in its context of the essential safety requirements of the Machinery Directive, and possible methods for risk assessment are presented. Based upon this information, the report can be used to select the required Performance Level PLr for safety functions in control systems. The Performance Level PL which is actually attained is explained in detail. The requirements for attainment of the relevant Performance Level and its associated Categories, component reliability, levels of diagnostic coverage, software safety and measures for the prevention of systematic and common-cause failures are all discussed comprehensively. Background information is also provided on implementation of the requirements in real-case control systems. Numerous example circuits show, down to component level, how Performance Levels a to e can be engineered in the selected technologies with Categories B to 4. The examples provide information on the safety principles employed and on components with well-trying safety functionality. Numerous literature references permit closer study of the examples provided. The report shows how the requirements of EN ISO 13849-1 can be implemented in engineering practice, and thus makes a contribution to consistent application and interpretation of the standard at national and international level.

Tele-tax Butterworth-Heinemann There has been significant expansion and development in clinical laboratory sciences and, in particular, metrological concepts, definitions and terms since the previous edition of this book was published in 1995. It is of prime importance to standardize laboratory reports for reliable exchange of patient examination data without loss of meaning or accuracy. New disciplines have appeared and the interrelationships between different disciplines within clinical laboratory sciences demand a common structure and language for data exchange, in the laboratory and with the clinicians, necessitating additional coverage in this book. These new sections will be based upon recommendations published by various national, regional, and international bodies especially IUPAC and IFCC. This book groups and updates the

recommendations and will be appropriate for laboratory scientists, medical professionals and students in this area. *Optimal Flow Control in Manufacturing Systems* Royal Society of Chemistry Wyoming Game Warden Joe Pickett and his wife, Marybeth, make separate discoveries that put the Pickett family in a pair of killers' crosshairs in this thrilling new novel in the bestselling series. A day before the three Pickett girls come home for Thanksgiving, Joe is called out for a moose-poaching incident that turns out to be something much more sinister: a local fishing guide has been brutally tortured and murdered. At the same time, Marybeth opens an unmarked package at the library where she works and finds a photo album that belonged to an infamous Nazi official. Who left it there? And why? She learns that during World War II, several Wyoming soldiers were in the group that fought to Hitler's Eagles Nest retreat in the Alps—and one of them took the Fuhrer's personal photo album. Did another take this one and keep it all these years? When a close neighbor is murdered, Joe and Marybeth face new questions: Who is after the book? And how will they solve its mystery before someone hurts them...or their girls? Meanwhile, Nate Romanowski is on the hunt for the man who stole his falcons and attacked his wife. Using a network of fellow falconers, Nate tracks the man from one city to another. Even as he grasps the true threat his quarry presents, Nate swoops in for the kill—and a stunning final showdown.

It all happens so quickly. One day you're living the dream, commuting to work by ferry with your charismatic neighbor Kit in the seat beside you. The next, Kit hasn't turned up

for the boat and his wife, Melia, has reported him missing. When you get off at your stop, the police are waiting. Another passenger saw you and Kit arguing on the boat home the night before and the police say that you had a reason to want him dead. You protest. You and Kit are friends—ask Melia, she'll vouch for you. And who exactly is this other passenger pointing the finger? What do they know about your lives? No, whatever danger followed you home last night, you are innocent, totally innocent. Aren't you?

Louis P. Hammett Mitchill Professor Emeritus of Chemistry, Columbia University My interest in linear free energy relationships began when, just out of graduate school, I read in 1924 the article by Bmsted and Pedersen which for the first time reported the existence of such a relationship. That interest continues to be an active one and, to judge merely by the extensive bibliographies contained in the present volume, it is widely shared. To my mind a particularly happy aspect of the existence of linear free energy relationships has been the proof it supplies that one need not suppose that the behavior of nature is hopelessly complicated merely because one cannot find a theoretical reason for supposing it to be otherwise. The effect of a substituent in an organic molecule on rate or equilibrium of reaction involves a fourfold difference between relatively large quantities, a situation which always makes for difficult theory. Yet systematic organic chemistry could hardly have existed were it not true that like changes in structure lead to like changes in reactivity. Linear free energy relationships constitute the quantitative specialisation of this fundamental principle, and they stand indeed more in the office of teacher to theory than in that of learner from it.

In this Special Issue, one review paper highlights the necessity of multiscale CFD, coupling micro- and macro-scales, for exchanging information at the interface of the two scales. Four research papers investigate the hydrodynamics, heat transfer, and chemical reactions of various processes using Eulerian CFD modeling. CFD models are attractive for industrial applications. However, substantial efforts in physical modeling and numerical implementation are still required before their widespread implementation.

People around the world are confused and concerned. Is it a sign of strength or of weakness that the US has suddenly shifted

from a politics of consensus to one of coercion on the world stage? What was really at stake in the war on Iraq? Was it all about oil and, if not, what else was involved? What role has a sagging economy played in pushing the US into foreign adventurism and what difference does it make that neo-conservatives rather than neo-liberals are now in power? What exactly is the relationship between US militarism abroad and domestic politics? These are the questions taken up in this compelling and original book. Closely argued but clearly written, 'The New Imperialism' builds a conceptual framework to expose the underlying forces at work behind these momentous shifts in US policies and politics. The compulsions behind the projection of US power on the world as a 'new imperialism' are here, for the first time, laid bare for all to see. This new paperback edition contains an Afterword written to coincide with the result of the 2004 American presidential election.

Principles of Mechanics OUP Oxford

This book presents a unified optimal control approach to a large class of problems arising in the field of production planning and scheduling. It introduces a leading optimal flow control paradigm which results in efficient solutions for planning and scheduling problems. This book also introduces the reader to

analytical and numerical methods of the maximum principle, used here as a mathematical instrument in modeling and solving production planning and scheduling problems. The book examines control of production flows rather than sequencing of distinct jobs.

Methodologically, this paradigm allows us to progress from initial assumptions about a manufacturing environment, through mathematical models and construction of numerical methods, up to practical applications which prove the relevance of the theory developed here to the real world. Given a manufacturing system, the goal is to control the production, subject to given constraints, in such a way that the demands are tracked as closely as possible. The book considers a wide variety of problems encountered in actual production planning and scheduling. Among the problems are production flow sequencing and timing, capacity expansion and deterioration, subcontracting and overtime. The last chapter is entirely devoted to applications of the theory to scheduling production flows in real-life manufacturing systems. The enclosed disk provides software implementations of the developed methods with easy, convenient user interface. We aimed this book at a student audience - final year undergraduates as well as master and Ph. D.
