This book presents a contemporary view of pharmacy practice research covering theories, methodologies, models and techniques that are applicable. It has thirteen chapters covering the range of quantitative, qualitative, action research and mixed methods as well as management theories underpinning change in pharmacy practice. "Pharmacy Practice Research Methods" examines the evidence and impact as well as explores the future. Pharmacy practice is rapidly transforming and as such it is to be adaptable as student and academic researchers and to not only understand techniques and methodologies, but as champions to nurture the field. There is a literature in this area but few integrated texts which cover the wide range of pharmacy practice including methodologies, evidence, practice and policy. This book provides a solid foundation for exploring these phenomenon further, and is expected to serve as a valuable resource for academics, students, policy makers and professional organisations.

This book specifies the foundation for

Adapted Primary Literature (APL), a novel text genre that enables the learning and teaching of science using research articles that were adapted to the knowledge level of high-school students. More than 50 years ago, J.J. Schwab suggested that Primary Scientific Articles “afford the most authentic, unretouched specimens of enquiry that we can obtain” and raised for the first time the idea that such articles can be used for “enquiry into enquiry”. This book, the first to be published on this topic, presents the realization of this vision and shows how the reading and writing of scientific articles can be used for inquiry learning and teaching. It provides the origins and theory of APL and examines the concept and its importance. It outlines a detailed description of creating and using APL and provides examples for the use of the enactment of APL in classes, as well as descriptions of possible future prospects for the implementation of APL.

Altogether, the book lays the foundations for the use of this authentic text genre for the learning and teaching of science in secondary schools.

The Art and Practice of Presenting Testimony as an Expert Technical Witness John Wiley & Sons

The Art of Looking Up surveys 40 spectacular ceilings around the globe that have been graced by the brushes of great artists including Michelangelo, Marc Chagall and Cy Twombly. From the floating women and lotus flowers of the Senso-ji Temple in Japan, to the religious iconography that adorns places of worship from Vienna to Istanbul, all the way to bold displays like the Chihuly glass flora suspended from the lobby of the Bellagio Hotel in Las Vegas: this book takes you on a tour of the extraordinary artworks that demand an

alternative viewpoint. History of art expert Catherine McCormack guides you through the stories behind the artworks – their conception, execution, and the artists that visualised them. In many cases, these artworks also make bold but controlled political, religious or cultural statements, revealing much about the society and times in which they were created. Divided by these social themes into four sections – Religion, Culture, Power and Politics – and pictured from various viewpoints in glorious colour photography, tour the astounding ceilings of these and more remarkable locations: Vatican Palace, Rome, Italy Blenheim Palace, Oxfordshire, UK Louvre Museum, Paris, France Dali Theatre-Museum, Figueres, Catalonia Museum of the Revolution, Havana, Cuba Capitol Building, Washington, DC, USA Four eight-page foldout sections showcase some of the world's most spectacular ceilings in exquisite detail. First and foremost, this is a visual feast, but also a desirable art book that challenges you to seek out fine art in more unusual places and question the statements they may be making.
