Paints a compelling picture of impressive pre-Columbian cultures and Old World civilizations that, contrary to many prevailing notions, were not isolated from one another In Ancient Ocean Crossings: Reconsidering the Case for Contacts with the Pre-Columbian Americas, Stephen Jett encourages readers to reevaluate the common belief that there was no significant interchange between the chiefdoms and civilizations of Eurasia and Africa and peoples who occupied the alleged terra incognita beyond the great oceans. More than a hundred centuries separate the time that Ice Age hunters are conventionally thought to have crossed a land bridge from Asia into North America and the arrival of Columbus in the Bahamas in 1492. Traditional belief has long held that earth's two hemispheres were essentially cut off from one another as a result of the post-Pleistocene meltwater-fed rising oceans that covered that bridge. The oceans, along with arctic climates and daunting terrestrial distances, formed impermeable barriers to interhemispheric communication. This viewpoint implies that the cultures of the Old World and those of the Americas developed independently. Drawing on abundant and concrete evidence to support his theory for significant pre-Columbian contacts, Jett suggests that many ancient peoples had both the seafaring capabilities and the motives to cross the oceans and, in fact, did so repeatedly and with great impact. His deep and broad work synthesizes information and ideas from archaeology, geography, linguistics, climatology, oceanography, ethnobotany, genetics, medicine, and the history of navigation and seafaring, making an innovative and persuasive multidisciplinary case for a new understanding of human societies and their diffuse but interconnected development.

A thorough, objective, and balanced analysis of the most prominent controversies made in the name of science—from the effectiveness of proposed medical treatments to the reality of supernatural claims. Edited by Michael Shermer, editor and publisher of The Skeptic magazine, this truly unique work provides a comprehensive introduction to the most prominent pseudoscientific claims made in the name of "science." Covering the popular, the academic, and the bizarre, the encyclopedia includes everything from alien abductions to the Bermuda Triangle, crop circles, Feng Shui, and near-death experiences. Fifty-nine brief descriptive summaries and 23 investigations from The Skeptic magazine give skeptical analyses of subjects as far-ranging as acupuncture, chiropractic, and Atlantis. The encyclopedia also gives for-and-against debates on topics such as evolutionary psychology and case studies on topics like police psychics and the medical intuitive Carolyn Myss. Finally, the volumes include five classic works in the history of science and pseudoscience, including the speech William Jennings Bryan never delivered in the Scopes trial, and the first scientific and skeptical investigation of a paranormal/spiritual phenomenon by Benjamin Franklin and Antoine Lavoisier.

Did aliens visit ancient civilizations? Could Jesus have fathered a dynasty? Did people of the ancient world visit the Americas centuries before Columbus? The public enjoys such questions, which have spawned countless books, movies and television series, but very rarely is any actual evidence produced. According to many eager writers and television hosts, evidence for long-ago astronauts or early transatlantic voyages can be found in ancient texts. But too often sources remain obscure and some writers have altered or fabricated texts to make their case for extraterrestrials and lost civilizations. This book examines more than 130 very old texts used to make the case for Atlantis, aliens, fallen angels, the Great Flood, giants, transatlantic voyagers, ancient high technology and many other mysteries. English translations are presented with explanatory notes showing how these texts have been used and abused to make entertaining claims about prehistory.

50 Popular Beliefs that People Think are True ABC-CLIO

In a dialogue by Plato, a text that has generated many fantasies and detached from this, I identify a large number of elements which are specific to Proto-Indo-European culture. This allows me to formulate the hypothesis that the subject in question was this ancient civilization. Based on that assumption, I discover a lot of unique information that needs to be studied and especially new data on what we call Homeland, as a place of formation of the culture and language of the Proto-Indo-Europeans. Even if the original text is far from the scientific rigor of today, the relevant cultural elements point, for example, to a much earlier discovery (360 BC), to the period of formation of that proto-civilization, its three social functions, the theme of the earth of the blessed, the divine twins or confirm many other contemporary discoveries about the subject.

Communicating archaeological heritage at the institutional level reflects on the current status of archeology, and a lack of communication between archaeologists and the general public only serves to widen the gap of understanding. As holders of this specific scientific expertise, effective

openness and communication is essential to understanding how a durable future can be built through comprehension of the past and the importance of heritage sites and collections. Developing Effective Communication Skills in Archaeology is an essential research publication that examines archeology as a method for present researchers to interact and communicate with the past, and as a methods for identifying the overall trends in the needs of humanity as a whole. Presenting a vast range of topics such as digital transformation, artificial intelligence, and heritage awareness, this book is essential for archaeologists, journalists, heritage managers, sociologists, educators, anthropologists, museum curators, historians, communication specialists, industry professionals, researchers, academicians, and students.

Secrets of Ancient America Encyclopedia of Dubious ArchaeologyThis book provides a fascinating, encyclopedic antidote for the mysticism and pseudoscience surrounding well-known or highly publicized archaeological and anthropological "discoveries." Archaeology attempts to answer the question "where do we come from?" in the broadest sense possible; as a result, it is a highly interesting topic for all mankind. When did human beings first walk the earth? How did civilization develop? What compelled our human ancestors to build things like the pyramids, the Great Sphinx, or Monk's Mound? This book presents the widely unknown scientific facts behind the most popular and enthralling "mysteries" of our world from an expert archaeological perspective--and lays out the information and research in a manner that is approachable, engaging, and entertaining for any reader. The Storied Landscape of Iroquoia explores the creation, destruction, appropriation, and enduring legacy of one of early America's most important places: the homelands of the Haudenosaunees (also known as the Iroquois Six Nations). Throughout the late seventeenth, eighteenth, and early nineteenth centuries of European colonization the Haudenosaunees remained the dominant power in their homelands and one of the most important diplomatic players in the struggle for the continent following European settlement of North America by the Dutch, British, French, Spanish, and Russians. Chad L. Anderson offers a significant contribution to understanding colonialism, intercultural conflict, and intercultural interpretations of the Iroquoian landscape during this time in central and western New York. Although American public memory often recalls a nation founded along a frontier wilderness, these lands had long been inhabited in Native American villages, where history had been written on the land through place-names, monuments, and long-remembered settlements. Drawing on a wide range of material spanning more than a century, Anderson uncovers the real stories of the people--Native American and Euro-American--and the places at the center of the contested reinvention of a Native American homeland. These stories about Iroquoia were key to both Euro-American and Haudenosaunee understandings of their peoples' pasts and futures. The land of pyramids and sphinxes, pharaohs and goddesses, Egypt has been a source of awe and fascination from the time of the ancient Greeks to the twenty-first century. In Egyptomania, Ronald H. Fritze takes us on a historical journey to unearth the Egypt of the past, a place inhabited by strange gods, powerful magic, spell-binding hieroglyphs, and the uncanny, mummified remains of ancient people. Walking among monumental obelisks and through the dark corridors of long-sealed tombs, he reveals a long-standing fascination with an Egypt of incredible wonder and mystery. As Fritze shows, Egypt has exerted a powerful force on our imagination. Medieval Christians considered it a holy land with many connections to biblical lore, while medieval Muslims were intrigued by its towering monuments, esoteric sciences, and hidden treasures. People of the Renaissance sought Hermes Trismegistus as the ancient originator of astrology, alchemy, and magic, and those of the Baroque pondered the ciphers of the hieroglyphs. Even the ever-practical Napoleon was enchanted by it, setting out in a costly campaign to walk in the footsteps of Alexander the Great through its valleys, by then considered the cradle of Western civilization. And of course the modern era is one still susceptible to the lure of undiscovered tombs and the curses of pharaohs cast on covetous archeologists. Raising ancient Egyptian art and architecture into the light of succeeding history, Fritze offers a portrait of an ancient place and culture that has remained alive through millennia, influencing everything from religion to philosophy to literature to science to popular culture.

The real history of the New World and the visitors, from both East and West, who traveled to the Americas long before 1492 • Provides more than 300 photographs and drawings, including Celtic runes in New England, Gaelic inscriptions in Colorado, and Asian symbols in the West • Reinterprets many archaeological finds, such as the Ohio Serpent Mound • Reveals Celtic, Hebrew, Roman, early Christian, Templar, Egyptian, Chinese, and Japanese influences in North American artifacts and ruins As the myth of Columbus “discovering” America falls from the pedestal of established history, we are given the opportunity to discover the real story of the New World and the visitors, from both East and West, who traveled there long before 1492. Sharing his more than 25 years of research and travel to sites throughout North America, Carl Lehrburger employs epigraphy, archaeology, and archaeoastronomy to reveal extensive evidence for pre-Columbian explorers in ancient America. He provides more than 300 photographs and drawings of sites, relics, and rock art, including Celtic and Norse runes in New England, Phoenician and Hebrew inscriptions in the Midwest, and ancient Shiva linga and Egyptian hieroglyphs in the West. He uncovers the real story of Columbus and his motives for coming to the Americas. He reinterprets many well-known archaeological and astronomical finds, such as the Ohio Serpent Mound, America’s Stonehenge in New Hampshire, and the Crespi Collection in Ecuador. He reveals Celtic, Hebrew, Roman, early Christian, Templar, Egyptian, Chinese, and Japanese influences in famous stones and ruins, reconstructing the record of what really happened on the American continents prior to Columbus. He also looks at Hindu influences in Mesoamerica and sacred sexuality encoded in archaeological sites. Expanding upon the work of well-known diffusionists such as Barry Fell and Gunnar Thompson, the author documents the travels and settlements of trans-Atlantic and trans-Pacific explorers, miners, and settlers who made it to the Americas and left their marks for us to discover. Interpreting their sacred symbols, he shows how their teachings, prayers, and cosmologies reveal the cosmic order and sacred landscape of the Americas.

Ice Ages Elm Hill

A rollicking debut book of essays that takes readers on a trip through the muck of American myths that have settled in the desert of our country's underbelly Early on July 16, 1945, Joshua Wheeler’s great grandfather awoke to a flash, and then a long rumble: the world’s first atomic blast filled the horizon north of his ranch in Alamogordo, New Mexico. Out on the range, the cattle had been bleached white by the fallout. Acid West, Wheeler’s stunning debut collection of essays, is full of these mutated cows: vestiges of the Old West that have been transformed, suddenly and irrevocably, by innovation. Traversing the New Mexico landscape his family has called home for seven generations, Wheeler excavates and reexamines these oddities, assembling a cabinet of narrative curiosities: a man who steps from the stratosphere and free-falls to the desert; a treasure hunt for buried Atari video games; a village plagued by the legacy of atomic testing; a lonely desert spaceport; a UFO festival during the paranoid Summer of Snowden. The radical evolution of American identity, from cowboys to drone warriors to space explorers, is a story rooted in southern New Mexico. Acid West illuminates this history, clawing at the bounds of genre to reveal a place that is, for better or worse, home. By turns intimate, absurd, and frightening, Acid West is an enlightening deep-dive into a prophetic desert at the bottom of America.

"What would it take to create a world in which fantasy is not confused for fact and public policy is based on objective reality?" asks Neil deGrasse Tyson, science popularizer and author of *Astrophysics for People in a Hurry*. "I don't know for sure. But a good place to start would be for everyone on earth to read this book." Maybe you know someone who swears by the reliability of psychics or who is in regular contact with angels. Or perhaps you're trying to find a nice way of dissuading someone from wasting money on a homeopathy cure. Or you met someone at a party who insisted the Holocaust never happened or that no one ever walked on the moon. How do you find a gently persuasive way of steering people away from unfounded beliefs, bogus cures, conspiracy theories, and the like? This down-to-earth, entertaining exploration of commonly held extraordinary claims

will help you set the record straight. The author, a veteran journalist, has not only surveyed a vast body of literature, but has also interviewed leading scientists, explored "the most haunted house in America," frolicked in the inviting waters of the Bermuda Triangle, and even talked to a "contrite Roswell alien." He is not out simply to debunk unfounded beliefs. Wherever possible, he presents alternative scientific explanations, which in most cases are even more fascinating than the wildest speculation. For example, stories about UFOs and alien abductions lack good evidence, but science gives us plenty of reasons to keep exploring outer space for evidence that life exists elsewhere in the vast universe. The proof for Bigfoot or the Loch Ness Monster may be nonexistent, but scientists are regularly discovering new species, some of which are truly stranger than fiction. Stressing the excitement of scientific discovery and the legitimate mysteries and wonder inherent in reality, this book invites readers to share the joys of rational thinking and the skeptical approach to evaluating our extraordinary world.
