Kautilya, also known as Chanakya, is

India's most illustrious political economist of all time. He regarded economic activity as the driving force behind the functioning of any political dispensation. In fact, he went to the extent of saying that revenue should take priority over the army because sustaining the army was possible out of a well-managed revenue system. Kautilya advocated limiting the taxation power of the State, having low rates of taxation, maintaining a gradual increase in taxation and most importantly devising a tax structure that ensured compliance. He strongly encouraged foreign trade, basing it on the premise that for a successful trade contract to be established, it had to be beneficial to all. He emphasised State control and investment in land, water and mining.

Kautilya was a true statesman who bridged the gap between experience and vision. For Kautilya, good governance was paramount. He suggested built-in checks and balances in systems and procedures for the containment of malpractices. Many postulates of Kautilya's philosophy of political economy are applicable to contemporary times.

The Agricultural Outlook 2021-2030 is a collaborative effort of the Organisation for Economic Co-operation and Development (OECD) and the Food and Agriculture Organization (FAO) of the United Nations. It brings together the commodity, policy and country expertise of both organisations as well as input

from collaborating member countries to provide an annual assessment of the prospects for the coming decade of national, regional and global agricultural commodity markets. The publication consists of 11 Chapters; Chapter 1 covers agricultural and food markets; Chapter 2 provides regional outlooks and the remaining chapters are dedicated to individual commodities.

Autonomy in Education World Scientific
Soil quality is threatened by many human-induced activities, but can also be improved by good land management. In the relatively short history of mankind on earth, the landscape and soils of the world have been drastically modified from their "natural " state. Landscapes altered by man's activities are termed "Anthroscaapes" which are inextricably

linked to culture and history. The challenges for today's scientists are to devise and implement sustainable land management strategies in order to preserve the land for the benefit of future generations. This book is a valuable compendium of the research experiences so far gained in studies of the context and concept of the "Anthroscape" and highlights the potential future contributions of such research to sustainable development.

The centromere is an essential structure on all eukaryotic chromosomes that allows the equipartition of chromosomes during mitotic and meiotic cell divisions. Since its cytogenetic recognition as a constructed part of a chromosome many

decades ago, great advances have been made in our understanding of this intriguing structure, especially at the molecular level. This book brings together all available information on the centromere. It covers in details the DNA and protein components of this structure, and their individual functions, in species as diverse as budding and fission yeasts, nematodes, *Drosophila*, mice, and humans; newly discovered roles of the centromere in marshalling "passenger" proteins; important emerging concepts such as latent centromeres and epigenetic factors; cytogenetic problems associated with centromere abnormalities; and practical application of centromere studies, such as in the construction of human artificial chromosomes for gene therapy.

Supported by ample illustrations, the book is written with sufficient simplicity and detail to suit both specialist and non-specialist scholars. It is the first book on the subject

Detailed and informative, this original report outlines a list of recommendations presented by the National Knowledge Commission (NKC) of the Government of India. The advice focuses on five key areas of knowledge--including access, concepts, creation, applications, and services--and addresses topics such as education, languages, translation, libraries, health, intellectual property rights, public funded research,

entrepreneurship, agriculture, and e-governance. Presenting the latest data on economic development, this account proves to be valuable for policymakers, developmental economists, social scientists, researchers, students, and non-governmental organizations.

The book deals with the strategies followed for planning, implementation, monitoring & evaluation and maintenance of structures etc for integrated management of watersheds in different rain fed agro-ecological regions in India. Various agencies involved in execution of watersheds like NWDPR, MoRD, ICAR/SAUs, International Donors and NGOs were

taken into consideration to study the successes and failures of watershed management programme in rehabilitation of arable and non-arable lands particularly in rain fed areas on sustainable basis through participatory watershed approach. SWOT analysis was also done in case of selected watersheds. This book will be of immense help to all those who are actively involved in watershed management programme. The policy makers, planners, researchers, soil conservationists, extension workers, progressive farmers and students associated with management of natural resources will also be benefited.

The push towards greater autonomy is one of the three main trends in every modern educational policy, alongside quality assurance and quality evaluation techniques and the need to devote attention to special — and often

disadvantaged — target groups. It is, however, difficult to derive a unified concept of 'autonomy' from the comparative indicators which are published on a regular basis and it has emerged that there are significant differences depending on the specific area and the administrative organisation of education in the country in question. During the discussions of the annual Congress of the European Association for Education Law and Policy (ELA) in Salzburg (1998) it was apparent that autonomy has to be considered in its various applications. Autonomy for school boards is realised through management, administrative mechanisms, management of staff and pedagogical options. Autonomy of administration requires competence, the

willingness to establish an autonomous administration and awareness of each party's responsibility in the educational process. The contents of this Yearbook are an answer to the question of how legislatures are responding to the trend towards greater responsibility, decentralisation and autonomy. It is an overview of the efforts made by the Member States of the European Union to apply the principle of subsidiarity.

The planet is undergoing a global change in climate that has begun to negatively affect populations and is predicted to accelerate in the coming

decades. The human beings now on Earth are the first to exist when the climatic dynamics of the planet are scientifically understood. That understanding makes patently clear that the aggregate effects of human activities have a distinct impact on planetary climate and the way humans will live, if they survive, in the future. This appears to be a tipping point time in human history when future climatic catastrophes that threaten generations of humans might be preventable if governments, institutions, and organizations now take mitigating actions. That suggests that the people currently alive on the planet bear a collective responsibility to address the negative human impact on climate.

How can open and distance learning and information and communications technology (ICT) provide us with more - and better - teachers? Open and distance learning is increasingly used in teacher education in developing and developed countries. It has the potential to strengthen and expand the teaching profession of the twenty-first century and to help achieve the target of education for all by 2015. Teacher Education Through Open and Distance Learning examines the case for using open and distance learning and ICT to train our educators. It describes and analyses the ways in which these methods and technologies are used for:

*initial teacher training and continuing

professional development *training principals and school managers *training those who provide non-formal adult and community education *communities of practice and sharing of knowledge and ideas within the teaching profession It also discusses the policy-making, management, technology, costing, evaluation and quality assurance aspects of this work. The contributors are outstanding practitioners in the field. The first review in over a decade, Teacher Education Through Open and Distance Learning draws on wide-ranging and international experience to summarise the strengths and weaknesses of new approaches to the education of teachers. It offers invaluable guidance to policymakers, planners, headteachers and teachers.

The IT Essentials: PC Hardware and Software Companion Guide 4/e supplements and complements the version 4.1 online curriculum offered by the Cisco

Networking Academy. The Companion Guide is designed as the textbook for the Networking Academy course, offering students a portable desk reference of the course content to use anytime anywhere as a study aid. The chapter content aligns 1:1 to the online course module topics, but does not merely mimic the content word-for-word. The authors present the course material in the Companion Guide in a comprehensive manner, providing their own examples where necessary to augment a student's understanding of the course material. This book will have the CompTIA A+ seal of approval. The book focuses on the following elements to support the online curriculum: *

- *Chapter Objectives are stated as questions at beginning of each chapter.

- *Key terms listed in the Chapter openers.
- *Enhanced readability for younger student comprehension.
- *How To Feature provides step-by-step tasks for common activities.
- *Key concept recaps, Check Your Understanding Questions, and next chapter previews are in a concise summary at the end of each chapter

Responding to a renewed interest in the growing problem of iodine deficiency worldwide, Drs. Charles Oxnard and Peter Obendorf, along with experienced translator and anatomist John Dennison, take a fresh look at the classic text, *Der endemische Kretinismus*, published in 1936 by Springer. Translated here for the first time into English, this landmark

text will be a welcome resource for researchers confronting the problem of iodine deficiency. Oxnard and Obendorf point out that there is very little detailed knowledge or numerical data on cretinism available in the English-speaking world. In addition, highly-renowned Professor Basil S. Hetzel, recently-retired World Health Organization Chairman of the International Council for Control of Iodine Deficiency Disorders, published in 2009 with Dr Chen Zu-pei on the resurgence of iodine deficiency in China. Indeed, throughout the entire developing world there may be as many as two billion people at risk to iodine deficiency; perhaps three quarters of a billion have goiter, and ten million may be cretins. Even in developed countries, iodine

deficiency is re-emerging (as in New South Wales in 19% of children) with the result of significantly reduced numbers of gifted children (though this is not cretinism per se). Certain to be of significant interest to a wide range of researchers, health providers and professionals, including government health administrators, this English translation of *Endemic Cretinism* is a major contribution to the literature.
