Diffusion, or the widespread adoption of innovations, is a critical yet under-researched topic. There is a wide gap between development and successful adoption of an innovation. Therefore, a better understanding of why and how an innovation is adopted can help develop realistic management and business plans. Most books on this topic use a single-

discipline approach to explain the diffusion of innovations. This book adopts a multi-disciplinary and managerial process approach to understanding and promoting the adoption of innovations, based on the latest research and practice. It will be of interest to graduates and researchers in marketing, product development and innovation courses.

'Art Arktis' explores the fragility and variety of a majestic, untouched world through a collection of fine-art photography. Dietmar Baum and Tini

Papamichalis embarked on a three-week expedition, capturing landscapes otherwise guarded from the sights of mankind by ice with the help of Hasselblad's latest camera technology. Using their trained eyes and artistic points of view, the two have created seemingly surreal images--as if a scene from another planet was painted. The goal of this Antarctic excursion in February 2014 was to give insight into this fragile and pristine land, transporting the viewer to these solitary vistas. The stunning array of images of Antarctica evokes a lasting impression--to undoubtedly preserve this region because of its indisputable role in

our planet's life. SELLING POINTS: \* Following successful exhibitions the images can now be seen in a large-format coffee table book \* Explore the wonders of Antarctica \* A must for any enthusiast of polar landscapes 120 colour photographs Turtleback Books

Trade and investment in natural mineral resources hold great potential for generating income, growth and prosperity, sustaining livelihoods and fostering local development. However, a large share of these resources is located in conflict affected and high-risk areas. In these areas, exploitation of natural mineral resources is significant and may contribute, directly or indirectly, to armed conflict, gross human rights violations and hinder economic and social development. The OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas provides step-by-step management recommendations endorsed by governments for global responsible supply chains of all minerals, in order for companies to respect human rights and avoid contributing to conflict through their mineral or metal purchasing decisions and

practices. The Due Diligence Guidance for minerals may be used by any company potentially sourcing any minerals or metals from conflict-affected and high-risk areas, and is intended to cultivate transparent, conflict-free supply chains and sustainable corporate engagement in the minerals sector.

Form 10-K. Philip's Road Atlases While millions of Ford rear-wheel-drive cars are equipped with the durable and simple C4 and C6 transmissions of the 1960s, early in the 1980s Ford replaced those old designs with the AOD transmission for a new generation of cars. Overdrive gears, once popular before WWII, were now becoming popular again, as manufacturers were under increasing pressure to raise fuel economy to meet ever more demanding EPA standards. A nice byproduct of that was more comfortable cruising speeds, where your engine didn't have to work so hard in addition to getting better fuel economy. In Ford AOD Transmissions: Rebuilding and Modifying the AOD, AODE and 4R70W, author George Reid walks you through the process step-by-step, from removing the transmission from the vehicle, to complete

disassembly and cleaning, to careful reassembly, to proper re-installation and road testing. Performance modifications are also covered, as well as an ID guide for various model numbers, evolutionary design changes, shift kit installation, and torque converter selection. This book is ideal for people who already have one of these transmissions in their car, as well as enthusiasts who would like to swap one of these more modern units into an older chassis to get all the benefits of overdrive. If you plan on researching or working on any one of these overdrive models, this book is a vital addition to your workbench or library.

*Outdoor Woodworking Projects* TeNeues We've all been there: that make-it-or-break-it moment of our careers—on the brink of a deal, poised at the starting gate, under the spotlight waiting to speak or perform in front of our peers. At this point, where everything seems to be on the line, most of us experience one overriding reaction—fear—and this fear can have negative physical, mental, and emotional consequences on how well we do our job. Don Greene, Ph.D., a renowned sports psychologist, teacher at the Juilliard School, and "stress" coach to top executives and entertainers, has spent decades studying fear and its effect on performance. In this groundbreaking book, Dr. Greene shares the proven techniques

he has used with Olympic athletes, Grand Prix drivers, the Vail Ski School, Golf Digest Schools, the New World Symphony, and Merrill Lynch traders to help them perform their best under pressure. In his years of working with Olympic and professional athletes, network news anchors, classical musicians, actors, dancers, trial attorneys, brokers, and CEOs, Dr. Greene discovered that there were certain commonalities in people's responses to high-pressure situations. Untrained, these individuals' reactions were allowing fear to take over and affect decision-making, poise, and display of skill. But Dr. Greene found that by applying methods such as the centering technique, these same people could work through their fear and perform better than ever before. *Fight Your Fear and Win* begins with a self-assessment performance survey that will allow you to pinpoint your own reactions to stress: how you handle distractions, how you are affected by nervousness, your mental outlook, your response to fear, and your ability to bounce back from failure. After completing this self-assessment, the book takes you through the seven essential

skills required for optimal performance: 1. Determination 2. Energy 3. Perspective 4. Courage 5. Focus 6. Poise 7. Resilience Interspersed with true stories from Greene's wide variety of experiences training everyone from the San Diego S.W.A.T. team to singers at the Metropolitan Opera, each chapter includes a series of mental and physical exercises that will help you track your progress. This simple twenty-one-day plan will make a profound difference in the way you approach challenging situations, and allow you to think more clearly and creatively under pressure. Whether you are giving a closing argument in a courtroom, making a presentation at work, auditioning for a role, or stepping up to the first tee, *Fight Your Fear and Win* is the ultimate tool to conquering your fear and achieving success when you need it most.

European Communities  
Aline Leon' In the last years, public attention was increasingly shifted by the media and world governments to the concepts of saving energy, reducing pollution, protecting the environment, and developing long-term energy supply solutions. In parallel, research funding relating to alternative fuels and energy carriers is increasing on both national and international levels. Why has future energy supply become such a matter of concern? The reasons are the problems created by the world's current energy supply system which is mainly based on fossil fuels. In fact, the

energy stored in hydrocarbon-based solid, liquid, and gaseous fuels was, is, and will be widely consumed for internal combustion engine-based transportation, for electricity and heat generation in residential and industrial sectors, and for the production of fertilizers in agriculture, as it is convenient, abundant, and cheap. However, such a widespread use of fossil fuels by a constantly growing world population (from 2.3 billion in 1939 to 6.5 billion in 2006) gives rise to the two problems of oil supply and environmental degradation. The problem related to oil supply is caused by the fact that fossil fuels are not renewable primary energy sources: This means that since the first barrel of petroleum has been pumped out from the ground, we have been exhausting a heritage given by nature.
