Applied Accounting is tailored to meet the needs of students taking a first year course in Financial accounting as part of a Diploma in Accounting or a National Diploma (Accounting) both in terms of the curriculum covered and it terms of the approach toward teaching and learning. The book is suitable even for students who may not have taken Accounting at Grade 12 level as it bridges the gap between school and the first level of tertiary study. The book does this by referencing prior knowledge covered at school level and by scaffolding the level of conceptual engagement. Furthermore, students are exposed to every day financial objects or transactions such what a cheque is, or how internet banking works and understanding is supported through the use of photographs, source documents and links to video clips and audio clips as well as instructions on practical activities. Language is pitched at a level accessible to first-year students, starting simply and progressively introducing students to the appropriate-level of Accounting discourse. Explanations are given in a step-by-step manner and explain to students why they are doing what they are doing. The text immediately highlights the key take-home points for the student. The text is extremely practical with plenty of exercises for students to practise, either alone in in pair work and group work encouraging interactive learning. In-text diagrams and tables further clarify concepts while online assessments provide further reinforcement of concepts. Applied Accounting also aims to inculcate a sense work readiness and work ethics by teaching basic Life skills and how to self-manage.

From tech start-ups to some of the world's most familiar trademark brands, each chapter opens with an engaging scenario or story using a familiar company. The same focus company, such as Walmart, Cedar Fair, American Eagle, National Beverage, Under Armour, or General Mills, is used throughout the entire chapter so that students can see how the concepts and calculations apply to a real-world company they are already familiar with"--

**Equity Valuation: Science, Art, or Craft?** TVET First Nated Series

The price at which a stock is traded in the market reflects the ability of the firm to generate cash flow and the risks associated with generating the expected future cash flows. The authors point to the limits of widely used valuation techniques. The most important of these limits is the inability to forecast cash flows and to determine the appropriate discount rate. Another important limit is the inability to determine absolute value. Widely used valuation techniques such as market multiples - the price-to-earnings ratio, firm value multiples or a use of multiple ratios, for example - capture only relative value, that is, the value of a firm's stocks related to the value of comparable firms (assuming that comparable firms can be identified). The study underlines additional problems when it comes to valuing IPOs and private equity: Both are sensitive to the timing of the offer, suffer from information asymmetry, and are more subject to behavioral elements than is the case for shares of listed firms. In the case of IPOs in particular, the authors discuss how communication strategies and media hype play an important role in the IPO valuation/pricing process.

The 2008 global financial crisis represented a pivotal moment that separated prior phases of the development of financial technology (FinTech) and regulatory technology (RegTech) from the current paradigm. Today, FinTech has entered a phase of rapid development marked by the proliferation of startups and other new entrants, such as IT and ecommerce firms that have fragmented the financial services market. This new era presents fresh challenges for regulators and highlights why the evolution of FinTech necessitates a parallel development of RegTech. In

particular, regulators must develop a robust new framework that promotes innovation and market confidence, aided by the use of regulatory "sandboxes." Certain RegTech developments today are highlighting the path toward another paradigm shift, which will be marked by a reconceptualization of the nature of financial regulation.
