Successfully responding to modern cybersecurity threats requires a well-planned, organized, and tested incident management program based on a formal incident management framework. It must be comprised of technical and non-technical requirements and planning for all aspects of people, process, and technology. This includes evolving considerations specific to the customer environment, threat landscape, regulatory requirements, and security controls. Only through a highly adaptive, iterative, informed, and continuously evolving full-lifecycle incident management program can responders and the companies they support be successful in combatting cyber threats. This book is the second in a series of

volumes that explains in detail the full-lifecycle cybersecurity incident management program. It has been developed over two decades of security and response experience and honed across thousands of customer environments, incidents, and program development projects. It accommodates all regulatory and security requirements and is effective against all known and newly evolving cyber threats. This book will inform the reader on how to assess existing information security and incident management/response programs and refine them or develop new ones in accordance with the needs of the organization and the evolving threat and regulatory landscapes.

Kurdish Studies is the leading journal in the field. In his editorial for last year's May issue of Kurdish Studies, founding editor Prof. Ibrahim Sirkeci noted how navigating the "highly contested and politically charged field" of Kurdish studies required impartiality and a commitment to academic integrity on the part of the journal. Yet our professed impartiality does not mean that we stand aloof from social and political developments, nor that our editorial work is not guided by a number of moral, political and academic principles. As the leading scholarly journal in the field of Kurdish studies, we are aware of the role that the journal plays in creating structures of visibility, shaping knowledge production and, not least, influencing careers. We therefore believe that the recent discussion on male violence and sexual harassment in Kurdish studies, which was initiated by the publication of an anonymous letter via the Kurdish Studies Network, is of direct significance to the journal. It has initiated a discussion that was, in many

ways, long overdue, both for the field as a whole and for our journal.

This collection examines new developments in economic and security co-operation in the Asia-Pacific in relation to two recent 'shock' events that have significantly impacted upon the region, these being the 1997/98 East Asian financial crisis and the September 11 attacks on the United States. These are examined through three 'prime dimensions' of analysis, namely: the tension between the 'post-shock' forces of 'imperative co-operation' and the counter-forces of Asia-Pacific 'complex diversity'; the growing conflation between economic and security issues - or the 'economics-security nexus' - in Asia-Pacific international relations; the relationship between the Asia-Pacific's new economic and security bilateralism and regional-level forms of co-operation, integration and governance.

The book provides an understanding the basic concepts and rules that need to be followed in protective services, including what comprises good security practice. This Second Edition is fully updated to include new case scenarios, threat vectors, and new ambush ploys and attack tactics used by opportunistic predators and seasoned threat actors with ever-advanced, sophisticated schemes. The book can be used by a person traveling with a single bodyguard or someone being moved by a full security detail. Features include: Identifies what can

A theoretical model of resilience is presented, with special reference to the police officer's job. The model includes many factors that are addressed throughout the book, and provides a useful framework for considering both the selection and the training issues. Section II emphasizes scientifically grounded, yet practical, approaches for selecting, training, and preparing personnel to function effectively in security operations. Section III presents

a collection of both case studies and special life-threatening scenarios that workers and leaders in security operations may face. The training of new police officers in Kosovo and of local demining teams in Sudan and Iraq are addressed, including contagion in the use of deadly force by police and security workers.
