This book offers a history of Continuing Professional Development (CPD) in the Australian context. It presents an approach that links the development of

CPD to a series of 'missed opportunities' and the identification of three key themes (mandatory CPD, competencies and regulation/registration) as well as with national regulation for select health professions. It not only relates the evolution of CPD in Australia but also serves as a guide to examining the situation in other countries and the emergence of CPD in individual professions. CPD has been provided for many decades, but it has not been rated as a 'high priority' or a key area of provision and has not been the focus of discussions or disputes in the higher education sector or in vocational education circles. Nevertheless in describing CPD's development, evidence is presented that CPD has made a significant contribution to the broad field of vocational education.

"The United States used to be a country where ordinary people could expect to improve their economic condition as they moved through life. For millions of us, this is no longer the case. Many Americans today have a lower standard of living as adults than they had in their parents' homes as children.... This book is about restoring the upward mobility of U.S.

workers. Specifically, it addresses the workforce-development strategy of creating not just jobs, but career ladders."

-from *Moving Up in the New Economy*

Career-ladder strategies create opportunities for low-wage workers to learn new skills and advance through a progression of higher-skilled and better-paid jobs. For example, nurses' aides can become licensed practical nurses, administrative assistants can become information technology workers, and bank tellers can become loan officers. Career-ladder programs could provide

opportunities for upward mobility and also stave off impending national shortages of skilled workers. But there are a variety of obstacles that must be faced candidly if career-ladder programs are to succeed. In *Moving Up in the New Economy*, Joan Fitzgerald explores specific programs in different sectors of the economy--health care, child care, education, manufacturing, and biotechnology--to offer a comprehensive analysis of this innovative approach to job training. Addressing the successes achieved--and the problems faced--by career-ladder programs, this timely book will be of interest to anyone interested in career development, workforce training, and employment issues, especially those that affect low-wage workers.
