The provision and use of traditional, complementary and alternative medicine (CAM) has been growing globally over the last 40 years. As CAM develops alongside - and sometimes integrates with - conventional medicine, this handbook provides the first major overview of its regulation and professionalization from social science and legal perspectives. The Routledge Handbook of Complementary and Alternative Medicine draws on historical and international comparative research to provide a rigorous and thematic examination of the field. It argues that many popular and policy debates are stuck in a polarized and largely asocial discourse, and that interdisciplinary social science perspectives, theorising diversity in the field, provide a much more robust evidence base for policy and practice in the field. Divided into four sections, the handbook covers: analytical frameworks power, professions and health spaces risk and regulation perspectives for the future. This important volume will interest social science and legal scholars researching complementary and alternative medicine, professional identify and health care regulation, as well as historians and health policymakers and regulators.

From Prehistoric Times to the Present Day BoD - Books on Demand

The management of infertility using acupuncture is an expanding area of practice and one which is frequently rewarding for TCM acupuncture practitioners. Acupuncture for IVF and Assisted Reproduction has been specially prepared to meet the growing demand for information in this area

and draws upon 20 years combined experience of the authors together with the latest evidence from both orthodox medicine and TCM. Richly illustrated and clearly written throughout, the book takes the reader through the anatomy and physiology of reproductive medicine (from both an orthodox and TCM perspective) and explains the underlying basis of orthodox medical fertility tests and investigations. The volume then explores the pathology and aetiology of TCM syndromes and shows how common fertility-related conditions, such as endometriosis and male factor infertility, affect Assisted Reproductive Technology (ART) success rates. It explains in great detail how to take a reproductive medical history and successfully diagnose TCM syndromes. Acupuncture for IVF and Assisted Reproduction also provides guidelines on how to regulate the menstrual cycle in preparation for IVF treatment and shows how lifestyle can affect fertility and ART success rates. Placing a strong emphasis on the practical aspects of patient care, Acupuncture for IVF and Assisted Reproduction contains an abundance of case history templates, algorithmic acupuncture treatment pathways and patient fact sheets and will be ideal for all acupuncture practitioners working in this field. "A must have for the bookshelf of any acupuncturist who is ever called upon to treat fertility issues - if you have room for one book this surely must be it." Reviewed by The Acupuncture Fertility Centre March 2015 "Practitioners of all levels of experience and TCM students should find it compelling reading and an invaluable companion to their learning." Reviewed by Stephen Clarke, Journal of the Australian Traditional Medicine Society May 2015 "This book is extremely well researched and referenced." Complementary Therapies (CT) refers to the practices, products, or health systems that are outside the realm of conventional medicine, used to treat disease or to promote health and well-being. Defining CT is difficult, because the field is very broad and constantly changing. The title of this book includes the words body, mind, and soul. The body and the mind (and their reciprocal relations) have been extensively studied scientifically. What about the soul? The book brings some points about this new ground in CT. We hope you find in the present work the sincere desire to collaborate with the dissemination of knowledge. May this book be useful and pleasant to you.

The first edition of this book was the first authoritative, systematic and comprehensive text to define the increasingly important and evolving specialty of paediatric palliative care. It explores both the clinical aspects and the multidimensional and holistic nature of care for the dying child, based on the knowledge that all human experience has a physical, emotional, psychological and spiritual impact. The book covers ways of providing support in all of these areas both for the child, families, and carers, recognising the importance of teamwork and taking an evidence-based approach. The Oxford Textbook of Palliative Care for Children is about the care of children for whom cure of their underlying disease is not possible. It encompasses the physical management of symptoms such as pain and nausea, as well as social issues such as accessing appropriate education, emotional issues such as techniques for communication, and spiritual issues such as feelings of guilt and isolation. The book suggests that if we are to maintain the quality of life for a child it is essential to recognise all these dimensions and try to address them. This can only be done by recognising the skills of a wide range of professionals and working together in ways that are not always intuitive to any one discipline. It explores the multidimensional and holistic nature of care for the dying child. Those working in paediatric palliative care recognise that all human experience has emotional, psychological and spiritual impact as well as physical, and this book offers the essential information needed for those involved in paediatric care to find ways of providing support in all of these areas. Comprehensive in scope, exhaustive in detail, and definitive in authority, this second edition has been thoroughly updated to cover new practices, current epidemiological data and the evolving models that support the delivery of palliative medicine to children. Paediatric palliative care is now developing in countries with differing health care systems, and being adapted to suit individual illnesses and the varying resources and geography in different parts of the world. This book is an essential resource for anyone who works with children worldwide.

Not all therapies can be treated the same way nor channeled through the signal process of randomized controlled trials. Therefore, detailed description of mixed methods approaches including observational, qualitative, cost-benefit and comparative effectiveness research are described. Part 2 deals with specific complementary therapies and how they are investigated by experts in each field. The book analyses the key questions asked and the controversies debated in complementary medicine research and offers clear and innovative guidance for answering these questions.
