At the age of 15 she beat Bobby Fischer's record to become the youngest grandmaster in history. During her glorious career, which she ended in 2014, she defeated World Champions

Boris Spassky, Anatoly Karpov, Garry Kasparov, Vishy Anand and Magnus Carlsen. As former U.S. Champion Joel Benjamin said after he lost to her: "She is a tiger at the chessboard. She absolutely has a killer instinct." Award-winning author Charles Hertan has revisited the gold mine of Judit Polgar's games and selected her best and most instructive tactics. They

are arranged by theme and presented with helpful explanations and lots of practical advice. You will be inspired by her clever traps, stunning sacrifices and cunning endgame tricks. You will learn from her tactical vision, calculating skills and counter-intuitive ideas. Strike Like Judit is a riveting guide that will help you win more games as you will find killer moves more easily and more quickly.

WINNER of the ChessCafe 2008 Book of the Year Award SHORTLISTED for The Guardian 2008 Chess Book of the Year Award Why is it that the human brain so often refuses to consider winning chess tactics? Every chess fan marvels at the wonderful combinations with which famous masters win their games. How

do they find those fantastic moves? Do they have special vision? And why do computers outwit us tactically? Forcing Chess Moves proposes a revolutionary method for finding winning moves.

Charles Hertan has made an astonishing discovery: the failure to consider key moves is often due to human bias. Your brain tends to disregard many winning moves because they are counter-intuitive or look unnatural. It's a fact of life: computers outdo us humans when it comes to tactical vision and brute force calculation. So why not learn from them? Charles Hertan's radically different approach is: use COMPUTER EYES and always look for the most forcing move first. By studying forcing sequences according to Hertan's method you will: Develop analytical precision Improve

your tactical vision Overcome human bias and staleness Enjoy the calculation of difficult positions Win more games by recognizing moves that matter. This New and Extended Fourth Edition of Herten's award-winning modern classic includes 50 extra pages with new and instructive combinations. There is a foreword by three-time US chess champion Joel Benjamin, and a special foreword to this new edition by Swedish Grandmaster Pontus Carlsson.

What is it that makes Magnus Carlsen the strongest chess player in the world? Why do Carlsen's opponents, the best players around, fail to see his moves coming? Moves that, when you replay his games, look natural and self-evident? Emmanuel Neiman has been studying

Carlsen's games and style of play for many years. His findings will surprise, delight, and educate every player, regardless of their level. Neiman explains a key element in the World Champion's play: instead of the 'absolute' best move he often plays the move that is likely to give him the better chances. Carlsen's singular ability to win positions that are equal or only very slightly favorable comes down to this: he doesn't let his opponents get what they hope for while offering them the maximum amount of chances to go wrong. In areas such as pawn play, piece play, exchanges as a positional weapon and breaking the rules tytyinndgames, Neiman shows that Magnus Carlsen has brought a new understanding to the game. He also looks at Carlsen's key

qualities that are not directly related to technique. Such as his unparalleled fighting spirit and his ability to objectively evaluate any kind of position and situation. Carlsen is extremely widely read and knows basically everything about chess. What's more, as the most versatile player in the history of the game he is totally unpredictable. 'The Magnus Method' presents a complete analysis of the skills that make the difference. With lots of surprising and instructive examples and quizzes. Examining Carlsen's abilities together with Emmanuel Neiman is a delightful way to get to unlock you own potential. WINNING CHESS Gambit Publications

There's no denying that the opening is one of the most daunting phases of the game for newcomers to chess. There are

literally hundreds of different opening lines, many with unusual sounding names, and some of these go up to twenty or so moves of theory. What is a chess player supposed to do: memorise countless variations? Don't panic! In *Discovering Chess Openings* John Emms argues that studying openings doesn't have to be hard work at all - indeed, it can be both enjoyable and enlightening. The key to successful opening play is not simply learning lines off by heart; instead it's the understanding of the basic principles, and here the reader is guided through the vital themes: swift development, central control and king safety. An appreciation of these principles and their many offshoots will actually allow readers to recreate and discover opening theory, giving them the

opportunity to choose the most suitable lines to play in their games.

A guide for chess-players to help them spot unlikely-looking tactical tricks and launch cunning attacks. Readers are shown how to hunt the enemy king and how to seize the initiative with surprising sacrifices. LeMoir shows that the key factors in becoming a deadly tactician are motivation (having the willingness to sacrifice and to consider tactical ideas

during play), imagination (being aware of tactical concepts that lead to ideas which other players might miss) and calculation (being able to analyse and calculate effectively). This user-friendly and humorously written book contains many outstanding examples of seized opportunities, together with guidance on how to spot surprising tactics and handle positions of material imbalance. Throughout, there are exercises for the reader to tackle.

The chess playing mind does not work like a machine. Selecting a move results from rather chaotic thought processes and is not the logical outcome of applying a rational method. The only problem with that, says International Master Willy Hendriks, is that most books and courses on improving at chess claim exactly the opposite. The dogma

of the chess instruction establishment is that if you only take a good look at certain 'characteristics' of a position, then good moves will follow more or less automatically. But this is not how it happens. Chess players, weak and strong, don't first judge the position, then formulate a plan and afterwards look at moves. It all happens at the same time, and pretending that it is otherwise is counterproductive. There is no use in forcing your students to mentally jump through theoretical hoops, according to experienced chess coach Hendriks. This work shows a healthy distrust of accepted methods to get better at chess. It teaches that winning games does not depend on ticking off a to-do list when looking at a position on the board. It presents club

and internet chess players with loads of much-needed no-nonsense training material. In this provocative, entertaining and highly instructive book, Hendriks shows how you can travel light on the road to chess improvement!

Any chess enthusiast knows how important tactics is in the "royal game" and how crucial it is to make a thorough study of this aspect of the game. But up to now opinion has been divided on the best way of studying tactics. The well-known Soviet international, grandmaster and chess author Averbakh has developed an entirely novel approach,

which is expounded in the present work. His main aim was to create a theoretical basis with whose aid the learner can effortlessly study the numerous and manifold tactical problems facing the chess player. Averbakh begins by examining the simplest situations resulting from confrontations between different pieces. He then proceeds to analyze more complex situations and demonstrates the importance of the double attack. With instructive examples he proves that double attacks in the broadest sense are the basis of most tactical operations. This discovery prompted Averbakh to focus his attention on the double attack in the first part of the book. The second part is devoted to combinations. The author delves into the question of what lies

hidden behind the mysterious concept of harmony of pieces. The astonishing simplicity of the answer he finds to this question enables him to reduce the bulk of the combinations to a handful of basic elements. From this Averbakh derives a convincing definition of the term "combination" and introduces a new, promising system of classifying different combinations. All this is explained with the aid of numerous practical examples including complete games and chess problems. The book contains special chapters with numerous exercise problems for the reader to test and consolidate his newly-acquired skill. In this way Averbakh's work is both very instructive and easy to understand.

* The perfect survival guide to the chess openings * All openings covered * Detailed verbal explanations of plans for both sides * Up-to-date and featuring many tips and recommendations * Insights into the 'character' of each opening * Written by one of the world's foremost opening experts The first moves of a chess game define the nature of the whole struggle, as both players stake their claim to the critical squares and start to develop their plans. It is essential to play purposefully and to avoid falling into traps or reaching a position that you don't understand. This is not a book that provides masses of

variations to memorize. Paul van der Sterren instead offers a wealth of ideas and explanation, together with the basic variations of each and every opening. This knowledge will equip players to succeed in the opening up to good club level, and provide a superb grounding in opening play on which to build a more sophisticated repertoire. The strategies he explains will, unlike ever-changing chess opening theory, remain valid as long as chess is played, and so the time spent studying this book will be rewarded many times over. Grandmaster Paul van der Sterren has won the Dutch Championship on two occasions, and in 1993 reached the Candidates stage of the World Chess Championship. He is an internationally renowned chess writer and editor: he was one of the founding

editors of New in Chess, for whose Yearbooks he has contributed more than 150 opening surveys.
