Flare CFD can reveal some unusual characteristics. The following factors need to be considered initially when considering the flare design specification: ... The flare process data (flow rate, gas composition and gas condition) will dictate the size ... 1.1 Flare Design Specification - Part 1 - Argo Flare Services gas. A key issue is the momentum of the waste gas as it exits the flare burner. In some cases, the waste gas

stream is available at a pressure that, if properly utilized, can provide the required momentum. In these cases, a high-pressure flare tip, typically of a multi-point design (Figure 7), is often used. Selecting the Proper Flare System addresses mechanical design, operation, and maintenance of flare equipment. It is important for all parties involved in the design and use of a flare system to have an effective means of communicating and preserving design information about the flare system. To this end, API has developed a set of flare datasheets, API Standard 521 specifically in the completion of landfill gas management facilities design. Natalia Kukleva, Frank Rhebergen, Rob Dalrymple, Jack Bryden, and Allan Leuschen of the MOE provided insight and support in developing the landfill gas management facilities design guidelines and interpreting the Landfill Gas Management Regulation throughout this process.
