discuss significant aspects of socio-geo-historical variation in language. In addition to British English, the focus is on Dutch, Scots and varieties of English outside England (in Wales and in the American colonies of the seventeenth century), in a time span ranging from medieval times to the nineteenth century. The aim is to highlight the traits that allow scholars to approach the study of

English in a broader European perspective, identifying the patterns that show convergence or divergence, not just in terms of shared linguistic features (morphosyntactic, lexical or pragmatic), but also in terms of methodological approaches. In this respect, great attention is given to the latest developments in corpus and computational linguistics, showing the extent to

which such new tools as electronic atlases and tagged corpora may facilitate answers to important research questions. At the same time, perceptual dialectology is awarded new interest on account of its significant role in normative and argumentative language use. [Proceedings of ELex 2009, Louvain-la-Neuve, 22-24 October 2009](#) Cambridge University Press The

Cambridge Handbook of English Corpus Linguistics (CHECL) surveys the breadth of corpus-based linguistic research on English, including chapters on collocations, phraseology, grammatical variation, historical change, and the description of registers and dialects. The most innovative aspects of the CHECL are its emphasis on critical discussion, its explicit evaluation of

the state of the art in each sub-discipline, and the inclusion of empirical case studies. While each chapter includes a broad survey of previous research, the primary focus is on a detailed description of the most important corpus-based studies in this area, with discussion of what those studies found, and why they are important. Each chapter also includes a critical discussion of the corpus-based

methods employed for research in this area, as well as an explicit summary of new findings and discoveries.

Human language technologies continue to play an important part in the modern information society. This book contains papers presented at

the fifth international conference 'Human Language Technologies – The Baltic Perspective (Baltic HLT 2012)', held in Tartu, Estonia, in October 2012. Baltic HLT provides a special venue for new and ongoing work in computational linguistics and related disciplines, both in the Baltic states and in a broader geographical perspective. It brings together scientists, developers,

providers and users of HLT, and is a forum for the sharing of new ideas and recent advances in human language processing, promoting cooperation between the research communities of computer science and linguistics from the Baltic countries and the rest of the world. Twenty long papers, as well as the posters or demos accepted for presentation at the conference, are published here. They

cover a wide range of topics: morphological disambiguation, dependency syntax and valency, computational semantics, named entities, dialogue modeling, terminology extraction and management, machine translation, corpus and parallel corpus compiling, speech modeling and multimodal communication. Some of the papers also give a general overview of the state of the art of

<p>human language technology and language resources in the Baltic states. This book will be of interest to all those whose work involves the use and application of computational linguistics and related disciplines. <i>Theory and Practice of Specialised Online Dictionaries</i> Litres</p> <p>This book is the first comprehensive monograph on the Function Theory of Lexicography, which originate</p>	<p>at the Aarhus School of Business (Aarhus University). Function Theory considers dictionaries to be tools that are constructed for assisting specific users with punctual needs in specific usage situations, e.g. communicative-oriented situations and cognitive-oriented situations. The book's main focus is on defending the independent academic status of lexicography and its</p>	<p>corollary: The process of designing, compiling and updating (specialised) online dictionaries needs a theoretical framework that addresses general and specific aspects. The former are common to all types of information tools, the latter are mainly dependent on the media for which the information tool is constructed and their specific target users. This book offers</p>
---	---	---

both aspects and moves from the highest level of abstraction to very detailed aspects of lexicographic work, e.g. how to convert an originally-conceived polyfunctional online dictionary into several monofunctional usage-based ones. The book illustrates that the theory and the methodology currently used by advocates of the Function Theory of Lexicography offers better

results than other approaches and therefore makes its case for proposing the Function Theory for terminological /terminographical work.

Human Language Technologies - The Baltic Perspective

Peter Lang
This book received the Enrique Alcaraz research award in 2010. This volume derives from the COMINTER-SIMULNEG research project which aims at

designing a pragmatic model for the analysis of intercultural communication between Spaniards and Britons, as well as developing a teaching methodology for cultural awareness based on computer simulation of real business settings. Contributions to this volume focus on three main issues: (a) explaining intercultural communication; (b) research on intercultural business communication

n; (c) the use of simulation and gaming methodology for the acquisition of communicative and cross-cultural competence in business settings. This book adopts an interdisciplinary approach to the study and practice of intercultural business communication, borrowing concepts from social anthropology, social cognition, cognitive linguistics, and intercultural pragmatics.	<u>Integrating Information and Communication Technologies in English for Specific Purposes</u> Peter Lang This book defends two main ideas: there is a need and a market for better specialised dictionaries for learners; we need a sound theoretical framework for coping with known and unknown challenges (for example the Internet) in the realm of pedagogical	specialised lexicography. Both themes were Enrique Alcaraz's driving force during his life. Hence, his memory deserves this book that has been written by leading scholars in the field ? they have compiled more than 70 dictionaries and published hundreds of books and articles on the topics here discussed ? although only two of them knew him in person. <i>The Curious History of Alphabetical Order</i>

<p>Routledge The field of lexicography is undergoing a major revolution. The rapid replacement of the traditional paper dictionary by electronic dictionaries opens up exciting possibilities but also constitutes a major challenge to the field. The eLexicography in the 21st Century: New Challenges, New Applications conference organized by the Centre for English Corpus</p>	<p>Linguistics of the Université catholique de Louvain in October 2009 aimed to bring together the many researchers around the world who are working in the fast developing field of electronic lexicography and to act as a showcase for the latest lexicographic developments and software solutions in the field. The conference attracted both academics and industrial partners from 30 different countries who</p>	<p>presented electronic dictionary projects dealing with no less than 22 languages. The resulting proceedings volume bears witness to the tremendous vitality and diversity of research in the field. The volume covers a wide range span of topics, including: -the use of language resources for lexicographic purposes, in the form of lexical databases like WordNet or corpora of different types - innovative</p>

This volume provides concise, authoritative accounts of the approaches and methodologies of modern lexicography and of the aims and qualities of its end products. Leading scholars and professional lexicographers, from all over the world and representing all the main traditions and perspectives,

assess the state of the art in every aspect of research and practice. The book is divided into four parts, reflecting the main types of lexicography. Part I looks at synchronic dictionaries - those for the general public, monolingual dictionaries for second-language learners, and bilingual dictionaries. Part II and III are devoted to the distinctive methodologies and concerns of historical dictionaries and specialist

dictionaries respectively, while chapters in Part IV examine specific topics such as description and prescription; the representation of pronunciation; and the practicalities of dictionary production. The book ends with a chronology of major events in the history of lexicography. It will be a valuable resource for students, scholars, and practitioners in the field.

Linguistic Approaches
 Lexicography at a Crossroads
 Dictionaries and Encyclopedias Today,
 Lexicographical Tools Tomorrow
 This book puts forward the specialised lexicographical approach (SLA) as the result of a natural evolution in the field of specialised dictionary-making that goes a step further the «mere» terminographical practice. The kind of specialised lexicographical

works to be obtained with this approach are specialised, active, user-friendly, user-focused, corpus-based dictionaries deeply grounded on the belief that terminology has a practical, communicative dimension that terminographical works have not normally reflected. All through this book the theoretical and applied aspects of this approach have been illustrated by

showing the elaboration process of an active, corpus-based, bilingual (English-Spanish, Spanish-English) dictionary of the ceramics industry. The first part of the book provides a sound theoretical framework in which the different aspects involved in the creation of dictionaries within the SLA for speciality areas of knowledge have been progressively disclosed -	namely, a review on specialised languages, corpus linguistics, terminology and socio-economic aspects - all this leading to the final characterisation of specialised lexicography from a theoretical perspective. On the basis of this theoretical framework and according to the SLA, this book also presents an innovative, corpus-based method of work for specialised	dictionary-making, closely linked to the use of corpora, terminotics and new technologies. <i>The IATIS Yearbook</i> Walter de Gruyter The Bloomsbury Companion to Lexicography offers the definitive guide to a key area of linguistic study. Each companion is a comprehensive reference resource featuring an overview of key topics, research areas, new

directions and a manageable guide to beginning or developing research in the field. Lexicography, as the practice of compiling dictionaries, has a long tradition that has been, for much of the time, largely independent of linguistics. The direct influence of linguistics on lexicography goes back around 50 years, though longer in the case of learners' dictionaries. The present volume aims

to reflect on the research that has been and is being done in lexicography and to point the way forward. It tackles, among other topics, the critique of dictionaries in the electronic medium, the future of historical lexicography in the electronic mode with special reference to the online Oxford English Dictionary, and e-lexicography in general.

A&C Black Translation technologies are moulded by and impact upon humans in all sorts of ways. This state-of-the-art volume looks at translation technologies from the point of view of the human users – as trainee, professional or volunteer translators, or as end users of translations

produced by machines. Covering technologies from machine translation to online collaborative platforms, and practices from 'traditional' translation to crowdsourced translation and subtitling, this volume takes a critical stance, questioning both utopian and dystopian visions of translation technology. In eight chapters, the authors propose ideas on how technologies can better serve	translators and end users of translations. The first four chapters explore how translators – in various contexts and with widely differing profiles – use and feel about translation technologies as they currently stand, while the second four chapters focus on the future: on anticipating needs, identifying emerging possibilities, and defining interventions that can help to shape	translation practice and research. Drawing on a range of theories from cognitive to social and psychological, and with empirical evidence of what the technologization of the workplace means to translators, Human Issues in Translation Technology is key reading for all those involved in translation and technology, translation theory and translation research methods.

Handbook of Business Communication Peter Lang Dictionaries are a powerful genre, perceived as authoritative and objective records of the language, impervious to personal bias. But who makes dictionaries shapes both how they are constructed and how they are used. Tracing the craft of dictionary making from the fifteenth century to the present day, this book explores the vital but little-

known significance of women and gender in the creation of English language dictionaries. Women worked as dictionary patrons, collaborators, readers, compilers, and critics, while gender ideologies served, at turns, to prevent, secure, and veil women's involvements and innovations in dictionary making. Combining historical, rhetorical, and feminist

methods, this is a monumental recovery of six centuries of women's participation in dictionary making and a robust investigation of how the social life of the genre is influenced by the social expectations of gender.

Electronic Lexicography

Basic Books Until now, there has been very little research into the use of online dictionaries. In contrast, the market for online dictionaries is

increasing both for academic lexicography and for commercial lexicography, with sales figures for printed reference works in continual decline. This has led to a demand for reliable empirical information on how online dictionaries are actually being used and how they could be made more user-friendly. The volume *Using Online Dictionaries* makes a substantial

contribution to closing this research gap. It is divided into four parts: The first part contains articles on fundamental issues: a research review of the empirical studies on digital dictionaries which have already been carried out, and a brief methodological guideline for lexicographical researchers who are interested in conducting their own empirical research. The second part contains the

results of two studies that focus on general questions about the use of online dictionaries. It presents empirical data on contexts of dictionary use, on expectations and demands regarding online dictionaries. Furthermore, innovative features, such as the use of multimedia elements or the option of a user-adaptive interface and questions of design were assessed empirically. The third part

of this volume comprises more specific studies of online dictionaries: an eye-tracking study evaluating the new web design of the dictionary portal OWID and a log file study which tries to get to the bottom of the following question: Do dictionary users look up frequent words, or put differently, is there a connection between how often a word is looked up and how often it appears in a corpus? In the

last chapter of this thematic section, the question of how users judge the combination of a written paraphrase and an additional illustration in online dictionaries is addressed. The last part focuses on the use of monolingual dictionaries, in particular the German online dictionary *elexiko*. In this context, two online questionnaire-based studies were carried out. The empirical

studies were conducted in the form of online surveys combining questionnaires and experimental elements and in the form of laboratory studies using eye-tracking technology as well as using observational methods such as log file analyses. Regarding the comprehensive research framework, this volume can be relevant to lexicographers, metalexigraphers and linguists who are interested

in the use of (online) dictionaries and in the development and exploration of lexicographical data for the internet, as well as linguists interested in empirical methods. It addresses a broad expert audience by presenting an academic subject which is currently the focus of much discussion. *Lexicography versus Terminography* by Peter Lang. This book fills the need for a text that

integrates Information and Communication Technologies (ICTs) into English for Specific Purposes (ESP). It offers insights on current methodological principles in ESP in both academic and professional contexts, drawing on authentic teaching and learning situations, and analyses best practice guidelines. Part I begins with ESP pedagogical principles and technological

practice in order to focus on its two main branches: English for Academic Purposes, which includes linguistic skills and students' needs, and English for Occupational Purposes, specifically looking at Business, Medical and Translators courses. This book is a great resource for ESP researchers, educators and students, because it provides case studies of how ICTs can be used in

<p>English for multiple purposes. Authors present their experiences of integrating tools into their instructions, with each chapter contributing unique pedagogical implications.</p> <p><u>A Corpus-based Approach</u> Oxford University Press</p> <p>This volume brings together work by both well-known scholars and emerging researchers in the various areas of Language for</p>	<p>Specific Purposes (LSP), such as political, legal, medical, and business discourse. The volume is divided into three parts in order to align rather than separate three different but related aspects of LSP: namely, translation, linguistic research, and domain specific communication on the web. Underlying all the contributions here is the growing awareness of the ever-increasing</p>	<p>multiformity of specialised communication and the ever-wider social implications of the communicative situations in which it is embedded, especially where it involves the need to move across languages, cultures and modes, as in translation and interpreting. The contributions consistently bear witness to the need to review received notions, pose new</p>
---	--	---

questions, and explore fresh perspectives. The picture that emerges is one of extreme complexity, in which researchers into specifically linguistic aspects of LSPs and their translation across languages and media declare their awareness of the pressing need to come to terms with a wide range of social, pragmatic, intercultural and political factors, above and beyond socio-

technical knowledge of the domains under investigation.

Using Corpora to Learn about Language and Discourse

Springer Science & Business Media
This volume reflects the latest work of scholars specialising in the linguistic and legal aspects of normative texts across languages (English, Danish, French, Italian, Spanish) and law systems.

Like other domains of specialised language use, legal discourse is subject to the converging pressures of internationalisation and of emerging practices that destabilise well-established norms and routines. In an integrated, interdependent context, supranational laws, rules and procedures are gradually developed and harmonised to regulate issues that can no longer be dealt with

by national laws alone, as in the case of the European Union. The contributors discuss the impact of such developments on the construction, evolution and hybridisation of legal texts, analysed both linguistically and from the practitioner's standpoint.

Researching Language and the Law

Peter Lang
The chapters constituting this volume focus on legal language seen from cross-cultural perspectives, a topic which

brings together two areas of research that have burgeoned in recent years, i.e. legal linguistics and intercultural studies, reflecting the rapidly changing, multifaceted world in which legal institutions and cultural/national identities interact.

Within the broad thematic leitmotif of this volume, it has been possible to identify two major strands: legal

discourse across languages on the one hand, and legal discourse across cultures on the other. Of course, labels of this kind are adopted partly as a matter of convenience, and it could be argued that any paper dealing with legal discourse across languages inevitably has to do with legal discourse across cultures. But a closer inspection of the papers

comprising each of these two strands reveals that there is a coherent logic behind the choice of labels. All seven chapters in the first section are concerned with legal topics where more than one language is at stake, whereas all seven chapters in the second section are concerned with legal topics where cultural differences are brought to the fore.

This volume presents some of the findings from a project on various aspects of Alternative Dispute Resolution (ADR), including conciliation, mediation, and arbitration. To study the discursive practices of ADR today, an international initiative has been undertaken by a group of specialists in discourse analysis, law, and arbitration from more than twenty countries. The

chapters in this volume draw on discourse-based data (narrative, documentary and interactional) to investigate the extent to which the 'integrity' of ADR principles is maintained in practice, and to what extent there is an increasing level of influence from litigative processes and procedures. The primary evidence for such practices comes from textual and

discourse-based studies, ethnographic observations, and narratives of experience on the part of experts in the field, as well as on the part of some of the major corporate stakeholders drawn from commercial sectors.

Using Online Dictionaries

Peter Lang
In spite of the day-to-day relevance of business communication, it remains underrepresented in

standard handbooks and textbooks on applied linguistics. The present volume introduces readers to a wide variety of linguistic studies of business communication, ranging from traditional LSP approaches to contemporary discourse-based work, and from the micro-level of lexical choice to macro-level questions of language policy and culture.
