Surrogate Motherhood: Conception in the Heart is a compelling account written with analytical clarity and remarkable compassion. Helena Ragoné has given long overdue humanity and voice to the actual participants in the surrogate motherhood experience—a heretofore inaccessible population—and the results are fascinating. Anyone interested in fertility, parenting, reproduction, and kinship, or anyone interested in

contemporary culture will want to read this book.

Peterson's Graduate Programs in the Physical Sciences, Mathematics, Agricultural Sciences, the Environment & Natural Resources 2012 Univ of California Press

Legal research examines subject matter enshrouded in social circumstances in order to conceptualize theories and prepare a future course of action. This dynamic, inter-disciplinary, and labyrinthine character of legal research requires researchers to be fluid, eclectic, and analytical in their approach. Idea and Methods of Legal Research unearths how the thinking process is to be

streamlined in research, how a theme is built on the basis of comprehensive and intensive study, and the paths through which notions of objectivity, feminism, ethics, and purposive character of knowledge are to be understood. The book first explains the meaning, evolution, and scope of legal research, and discusses objectivity and ethics in legal research. It engages with the requirements, advantages, and limits of various doctrinal and non-doctrinal methods and tools, and the points to be considered in selecting a suitable method or combination of methods. It highlights analytical, historical, philosophical, comparative, qualitative, and quantitative methods of legal research. The book then goes on to discuss the use of multi-method legal

research, policy research, action research, and feminist legal research and finally, reflects on research-based critical legal writing, as opposed to client-related legal writing. This book, thus, is a comprehensive answer to key questions one faces in legal research.

Physical Sciences, Mathematics, Agricultural Sciences, the Environment & Natural Resources contains a wealth of information on colleges and universities that offer graduate work in these exciting fields. The institutions listed include those in the United States and Canada, as well international institutions that are accredited by U.S. accrediting bodies. Up-to-date information, collected through Peterson's Annual Survey of Graduate and Professional Institutions, provides valuable information on degree offerings, professional accreditation, jointly offered degrees, part-time and evening/weekend programs, postbaccalaureate distance degrees, faculty, students, degree requirements, entrance requirements, expenses, financial support, faculty research, and

unit head and application contact information. Readers will find helpful links to in-depth descriptions that offer additional detailed information about a specific program or department, faculty members and their research, and much more. In addition, there are valuable articles on financial assistance, the graduate admissions process, advice for international and minority students, and facts about accreditation, with a current list of accrediting agencies.

"This book contains some of the most up-to-date information available anywhere on a wide variety of topics related to Techno Security. As you read the book, you will notice that the authors took the approach of identifying some of

the risks, threats, and vulnerabilities and then discussing the countermeasures to address them. Some of the topics and thoughts discussed here are as new as tomorrow's headlines, whereas others have been around for decades without being properly addressed. I hope you enjoy this book as much as we have enjoyed working with the various authors and friends during its development. —Donald Withers, CEO and Cofounder of TheTrainingCo. • Jack Wiles, on Social Engineering offers up a potpourri of tips, tricks, vulnerabilities, and lessons learned from 30-plus years of experience in the worlds of both physical and technical security. • Russ Rogers on the Basics of Penetration Testing illustrates the standard methodology for penetration testing:

information gathering, network enumeration, vulnerability identification, vulnerability exploitation, privilege escalation, expansion of reach, future access, and information compromise. • Johnny Long on No Tech Hacking shows how to hack without touching a computer using tailgating, lock bumping, shoulder surfing, and dumpster diving. • Phil Drake on Personal, Workforce, and Family Preparedness covers the basics of creating a plan for you and your family, identifying and obtaining the supplies you will need in an emergency. • Kevin O'Shea on Seizure of Digital Information discusses collecting hardware and information from the scene. • Amber Schroader on Cell Phone Forensics writes on new methods and guidelines for digital forensics. • Dennis O'Brien on

RFID: An Introduction, Security Issues, and Concerns discusses how this well-intended technology has been eroded and used for fringe implementations. • Ron Green on Open Source Intelligence details how a good Open Source Intelligence program can help you create leverage in negotiations, enable smart decisions regarding the selection of goods and services, and help avoid pitfalls and hazards. • Raymond Blackwood on Wireless Awareness: Increasing the Sophistication of Wireless Users maintains it is the technologist's responsibility to educate, communicate, and support users despite their lack of interest in understanding how it works. • Greg Kipper on What is Steganography? provides a solid understanding of the basics of steganography, what it can and

can't do, and arms you with the information you need to set your career path. • Eric Cole on Insider Threat discusses why the insider threat is worse than the external threat and the effects of insider threats on a company. Internationally known experts in information security share their wisdom Free pass to Techno Security Conference for everyone who purchases a book—\$1,200 value

A revitalized version of the popular classic, the Encyclopedia of Library and Information Science, Second Edition targets new and dynamic movements in

the distribution, acquisition, and development of print and online media- compiling articles from more than 450 information specialists on topics including program planning in the digital era, recruitment, information management, advances in digital technology and encoding, intellectual property, and hardware, software, database selection and design, competitive intelligence, electronic records preservation, decision support systems, ethical issues in information, online library instruction, telecommuting, and digital library projects.

The Stud Book Peterson's Graduate Programs in the Physical Sciences, Mathematics, Agricultural Sciences, the Environment & Natural

Resources 2015 contains more than 3,000 graduate programs in the relevant disciplines-including agriculture and food sciences, astronomy and astrophysics, chemistry, physics, mathematics, environmental sciences and management, natural resources, marine sciences, and more. Informative data profiles for more than 3,000 graduate programs at nearly 600 institutions are included, complete with facts and figures on accreditation, degree requirements, application deadlines and contact information, financial support, faculty, and student body profiles. Two-page in-depth descriptions, written by featured institutions, offer complete details on specific graduate programs, schools, or departments as well as information on faculty research. Comprehensive

directories list programs in this volume, as well as others in the graduate series.

Peterson's

Peterson's Graduate Programs in the Physical Sciences contains a wealth of information on colleges and universities that offer graduate work in Astronomy and Astrophysics, Chemistry, Geosciences, Marine Sciences and Oceanography, Meteorology and Atmospheric Sciences, and Physics. The institutions listed include those in the United States, Canada, and abroad that are accredited by U.S. accrediting bodies. Up-to-date information, collected through Peterson's Annual Survey of

Graduate and Professional Institutions, provides valuable information on degree offerings, professional accreditation, jointly offered degrees, part-time and evening/weekend programs, postbaccalaureate distance degrees, faculty, students, degree requirements, entrance requirements, expenses, financial support, faculty research, and unit head and application contact information. As an added bonus, readers will find a helpful "See Close-Up" link to in-depth program descriptions written by some of these institutions. These Close-Ups offer detailed information about the physical sciences program, faculty members and their research, and links to the program or department's Web site. In addition, there are valuable articles on financial assistance and support at the

graduate level and the graduate admissions process, with special advice for international and minority students. Another article discusses important facts about accreditation and provides a current list of accrediting agencies.

NASA's University Program : Active Projects, Fiscal Year 1981 Oxford University Press

Prioritizing Academic Programs and Services REVISED AND UPDATED
Increasing economic concerns make the new edition of this best-selling classic an invaluable resource for those who want and need to implement a proven step-by-step approach to reallocating resources in tough times. Thoroughly revised and updated, *Prioritizing Academic Programs and Services* includes new recommendations from the

field, communication strategies for more successful campus implementation, a new section on the sources of hidden costs, and a Prioritization Process and Implementation workbook designed to help administrators avoid costly mistakes. This book includes access to additional content online, including models for prioritization from a variety of campuses. Based on the author's extensive consulting experience, this necessary and timely resource offers the best advice for addressing the current economic concerns affecting most colleges and universities. Praise for *Prioritizing Academic Programs and Services* "For more than a decade, higher education leaders have turned to Dickeson's practical guide to academic program assessment. These newly

expanded approaches are just in time for today's competitive environment."

—SUZANNE SHIPLEY, president, Shepherd University "Dickeson provides a compelling rationale for program prioritization as well as a practical planning structure that promotes alignment between programs, resources, and university mission. Presidents and provosts can use his approach to frame campus discussions around the future of the institution and away from legacy programs whose time has passed."

—KYLE R. CARTER, provost and senior vice chancellor, Western Carolina University "Dickeson's approach ensures that critical decisions regarding academic programs and resource allocation are aligned with strategic goals and institutional mission. As one of

the early adopters of the process that he proposes, I am convinced that it is a powerful and practical tool for any college or university committed to remaining focused, resilient, vital, and relevant in a dynamic and increasingly challenging environment."

—DAVID MAXWELL, president, Drake University [NASA University Program Management Information System, FY 1988](#) Routledge

A rich compendium of Western art by women, this book also contains essays which examine the many economic, social, and political forces that have shaped the art over years of pivotal change. The women profiled played an important role in gaining the acceptance of women as men's peers in artistic communities. Their independent spirit resonates in studios and galleries

throughout the country today. Photos. Summaries of Studies in Agricultural Education, Pacific Region Arizona AttorneyNASA's University Program Active ProjectsProposed Grazing Management Program for the Eastern Arizona EIS AreaSurrogate Motherhood Central to contemporary debates in the United States on migration and migrant policy is the idea of citizenship, and—as apparent in the continued debate over Arizona’s immigration law SB 1070—this issue remains a focal point of contention, with a key concern being whether there should be a path to citizenship for “undocumented” migrants. In *Disenchanting Citizenship*, Luis F. B. Plascencia examines two interrelated issues: U.S. citizenship and the Mexican migrants’ position in the United States.

The book explores the meaning of U.S. citizenship through the experience of a unique group of Mexican migrants who were granted Temporary Status under the “legalization” provisions of the 1986 IRCA, attained Lawful Permanent Residency, and later became U.S. citizens. Plascencia integrates an extensive and multifaceted collection of interviews, ethnographic fieldwork, ethno-historical research, and public policy analysis in examining efforts that promote the acquisition of citizenship, the teaching of citizenship classes, and naturalization ceremonies. Ultimately, he unearths citizenship’s root as a Janus-faced construct that encompasses a simultaneous process of inclusion and exclusion. This notion of citizenship is mapped on to the migrant experience,

arguing that the acquisition of citizenship can lead to disenchantment with the very status desired. In the end, Plascencia expands our understanding of the dynamics of U.S. citizenship as a form of membership and belonging.

Current Law Index CRC Press

Graduate Programs in the Physical Sciences, Mathematics, Agricultural Sciences, the Environment & Natural Resources 2012 contains more than 2,900 graduate programs in 59 disciplines-including agriculture and food sciences, astronomy and astrophysics, chemistry, physics, mathematics, environmental sciences and management, natural resources, marine sciences, and more. This guide is part of Peterson's six-volume Annual Guides to Graduate Study, the only annually

updated reference work of its kind, provides wide-ranging information on the graduate and professional programs offered by U.S.-accredited colleges and universities in the United States and throughout the world. Informative data profiles for more than 2,900 graduate programs in 59 disciplines, including facts and figures on accreditation, degree requirements, application deadlines and contact information, financial support, faculty, and student body profiles. Two-page in-depth descriptions, written by featured institutions, offer complete details on specific graduate programs, schools, or departments as well as information on faculty research and the college or university. Expert advice on the admissions process, financial support,

and accrediting agencies.

Comprehensive directories list programs in this volume, as well as others in the graduate series. Up-to-date appendixes list institutional changes since the last addition along with abbreviations used in the guide

Disenchanted Citizenship John Wiley & Sons

Demystifying the technology of telecommunications: a guided tour for the non-engineer This book provides an easy-to-understand introduction to the complex technical world of

telecommunications. From bandwidth to data transfer protocol to PSTN, ISDN, PCS, or ATM-widely respected telecommunications expert and author Roger L. Freeman explains it all. He walks the reader through a vast array of current topics, providing an encyclopedic overview of all branches of telecommunications-telephony, data communications, enterprise networks, television transmission, wireless systems, and cellular/personal communication services (PCS). Written for the layperson as well as newcomers to the field, this primer: * Assumes no mathematical or technical know-how on the part of the reader * Introduces all topics from the ground up * Clearly defines all terms, illustrating them with tangible examples * Features review

questions at the end of each chapter, designed to test understanding and reinforce comprehension * Includes one hundred figures to highlight the text * Reviews, in three appendices, the most rudimentary of mathematical and electrical concepts, as well as decibels and their applications Fundamentals of Telecommunications allows sales, marketing, and management personnel in the telecommunications industry to better understand the various technical and operational issues that come up in the course of their work. It also gives investors and financiers a basic reference to draw upon when dealing with clients in this rapidly evolving market.

Independent Spirits Elsevier
Well-versed in the mating habits of

captive animals, Sarah, who studies animal behavior at the zoo, longs to have a baby, while her loyal friends, each dealing with their own parenting issues, discover that the families they forge through shared experience are as important as those inherited through birth.
