## **DIGITAL FINANCE**

IGI Global  
Tracking the evolution of  
digital technology is no

easy task; changes  
happen so fast that  
keeping pace presents  
quite a challenge. This is,  
nevertheless, the aim of  
the Digital Enlightenment  
Yearbook. This book is the  
third in the series which  
began in 2012 under the  
auspices of the Digital

Enlightenment Forum.  
This year, the focus is on  
the relationship of  
individuals with their  
networks, and explores  
“Social networks and  
social machines,  
surveillance and  
empowerment”. In what is  
now the well-established

tradition of the yearbook, different stakeholders in society and various disciplinary communities (technology, law, philosophy, sociology, economics, policymaking) bring their very different opinions and perspectives to bear on this topic. The book is divided into four parts: the individual as data manager; the individual, society and the market; big data and open data; and new approaches. These are bookended by a Prologue and an Epilogue, which provide illuminating

perspectives on the discussions in between. The division of the book is not definitive; it suggests one narrative, but others are clearly possible. The 2014 Digital Enlightenment Yearbook gathers together the science, social science, law and politics of the digital environment in order to help us reformulate and address the timely and pressing questions which this new environment raises. We are all of us affected by digital technology, and the subjects covered here

are consequently of importance to us all. *Resilience and seizing opportunities* Apress This book considers all aspects of managing the complexity of Multimedia Big Data Computing (MMBD) for IoT applications and develops a comprehensive taxonomy. It also discusses a process model that addresses a number of research challenges associated with MMBD, such as scalability, accessibility, reliability, heterogeneity, and Quality of Service (QoS)

requirements, presenting case studies to demonstrate its application. Further, the book examines the layered architecture of MMBD computing and compares the life cycle of both big data and MMBD. Written by leading experts, it also includes numerous solved examples, technical descriptions, scenarios, procedures, and algorithms.

*Mobile Learning Apress*

This book constitutes the refereed proceedings of the 16th IFIP WG 9.4

International Conference on Social Implications of Computers in Developing Countries, ICT4D 2020, which was supposed to be held in Salford, UK, in June 2020, but was held virtually instead due to the COVID-19 pandemic. The 18 revised full papers presented were carefully reviewed and selected from 29 submissions. The papers present a wide range of perspectives and disciplines including (but not limited to) public administration, entrepreneurship, business administration,

information technology for development, information management systems, organization studies, philosophy, and management. They are organized in the following topical sections: digital platforms and gig economy; education and health; inclusion and participation; and business innovation and data privacy.

Discover the world of pharmacovigilance, where patient safety takes center stage. In "Vigilance

Unleashed: From Adverse Events to Patient Protection," we delve into the science and practices that safeguard patients from medication and medical devices' risks. Unravel the historical background, regulatory frameworks, and international collaborations that shape pharmacovigilance practices. From identifying adverse drug reactions to embracing emerging technologies and patient-centered approaches, this comprehensive guide

equips readers with essential knowledge to navigate the dynamic landscape of pharmacovigilance confidently. Join us on this journey to champion patient safety and unleash the power of vigilance in healthcare. Hungry Start-up Strategy John Wiley & Sons Explore the game-changing technology that allows mobile learning to effectively reach K-12 students Mobile Learning: A Handbook for Developers, Educators and Learners provides

research-based foundations for developing, evaluating, and integrating effective mobile learning pedagogy. Twenty-first century students require twenty-first century technology, and mobile devices provide new and effective ways to educate children. But with new technologies come new challenges—therefore, this handbook presents a comprehensive look at mobile learning by synthesizing relevant theories and drawing

practical conclusions for developers, educators, and students. Mobile devices—in ways that the laptop, the personal computer, and netbook computers have not—present the opportunity to make learning more engaging, interactive, and available in both traditional classroom settings and informal learning environments. From theory to practice, Mobile Learning explores how mobile devices are different than their technological

predecessors, makes the case for developers, teachers, and parents to invest in the technology, and illustrates the many ways in which it is innovative, exciting, and effective in educating K-12 students. Explores how mobile devices can support the needs of students. Provides examples, screenshots, graphics, and visualizations to enhance the material presented in the book. Provides developers with the background necessary to

create the apps their audience requires. Presents the case for mobile learning in and out of classrooms as early as preschool. Discusses how mobile learning enables better educational opportunities for the visually impaired, students with Autism, and adult learners. If you're a school administrator, teacher, app developer, or parent, this topical book provides a theoretical, well-researched discussion of the pedagogical theory and mobile learning, as

well as practical advice in setting up a mobile learning strategy.

Springer Nature

Provides information on using Android 3 to build and enhance mobile applications, covering such topics as creating user interfaces, using intents, databases, creating and controlling services, creating app widgets, playing audio and video, telphony, and using sensors. Original.

Economic growth in Sub-Saharan Africa is

estimated to have decelerated from 2.5 percent in 2017 to 2.3 percent in 2018, below the rate of growth of population for a fourth consecutive year. Regional growth in 2018 is below the pace projected in 2018 October issue of Africa's Pulse (0.4 percentage points lower). This slowdown was more pronounced in the first half of 2018 and it reflected weaker exports among the region's large oil exporters (Nigeria and Angola) due to dwindling oil production amid higher

but volatile international prices for crude petroleum. A deeper contraction in Sudanese economic activity and a broad-based growth slowdown among non-resource-intensive countries also played a role. Sub-Saharan African countries with fragile context have made considerable efforts to find a way out of fragility. Regional and sub-regional economic organizations are promoting economic cooperation and addressing security and peace challenges that go

beyond national borders. The special topic of this issue of Africa's Pulse argues that the digital economy can unlock new pathways for inclusive growth, innovation, job creation, service delivery and poverty reduction in Africa. The continent has made great strides in mobile connectivity; however, it still lags the rest of the world in access to broadband. Only 27 percent of the population in the continent have access to internet, few citizens have digital IDs, businesses are slowly

adopting digital technologies and only few governments are investing strategically in developing digital infrastructure, services, skills, and entrepreneurship.

The Transformative Power of Mobile Medicine: Leveraging Innovation, Seizing Opportunities, and Overcoming Obstacles of mHealth addresses the rapid advances taking place in mHealth and their

impact on clinicians and patients. It provides guidance on reliable mobile health apps that are based on sound scientific evidence, while also offering advice on how to stay clear of junk science. The book explores the latest developments, including the value of blockchain, the emerging growth of remote sensors in chronic patient care, the potential use of Amazon Alexa and Google Assistant as patient bedside assistants, the use of Amazon's IoT button, and

much more. This book enables physicians and nurses to gain a deep understanding of the strengths and weaknesses of mobile health and helps them choose evidence-based mobile medicine tools to improve patient care. Provides clinicians and technologists with an update on the latest mobile health initiatives and tools, including the work done at Beth Israel Deaconess Medical Center/Harvard Medical School Encompasses case studies with real-world examples to turn abstract

concepts into flesh and blood examples of how mHealth benefits the public Presents drawings, graphics and flow charts to help readers visualize the functionality and value of mobile medicine

## MOBILE OPPORTUNITIES AND APPLICATIONS FOR E-SERVICE INNOVATIONS

CRC Press

Mobile technology continues to shape our society, delivering information and knowledge right to our finger tips. It is only fitting that these advancements and opportunities are applied to the area of electronic services. *Mobile Opportunities and Applications for E-Service Innovations* brings together different

perspectives on the understanding of e-service and mobile communication, as well as their effects on the fields of marketing, management, and information systems. The growth of e-services as it relates to business-to-business, business-to-consumer, consumer-to-consumer, are essential to the interests of professionals, academics, and researchers, as well as industry consultants. *Computer Science in Industrial Application* Business Expert Press

With over one million copies sold worldwide, *Exploring Strategy* has long been the essential strategy text for managers of today and tomorrow. From entrepreneurial start-ups to multinationals, charities to government agencies, this book raises the big questions about organisations- how they grow, how they innovate and how they change. *Exploring Strategy, Text and Cases, 12th Edition* John Wiley & Sons  
The study, "Resilience and seizing opportunities -

Small-scale fisheries and aquaculture businesses that thrived during the COVID-19 pandemic in South and Southeast Asia", attempts to evaluate and compare the pre- and post-pandemic situation and scenario of the concerned groups of the fisheries and aquaculture industry in eight countries. It reveals how these groups survived by adopting innovations in various country contexts and social settings and how the production, supply and market continued

operation. The study shows how responsive the government policies and interventions were in supporting the concerned groups. It also shows the preventive measures taken to contain the mass spread of the COVID-19 pandemic and the manner in which the community livelihoods were impacted by these measures. The case studies included provide evidence of the resilience of the small-scale fishers, aquaculture operators and fisheries-based business operators and illustrate how

opportunities may be seized by them and others affected by similar pandemics and other natural disasters and events. The study sheds light on areas where more focus should be given so that all parties may be better prepared for future crises, have equitable and inclusive support policies, have transparency in policy responses as well as take into account gender equality. The recommendations of the study can be applied at national, regional and international level while

adaptation policies, investment and action plans may be taken for the sustainability and resilience of small-scale fisheries and aquaculture businesses in the future. Beacon Technologies Springer Nature CSIA 2014 focusses on improvements in computer science in industrial application. The contributions are grouped into five main sections: 1. Computer and Information Technology. 2. Business management, E-commerce and Tourism. This section covers mainly

basic theory and general method of economic management businesses and market economy. & nbs

David Young, Chief Engineer, Radius Networks Foreword by Asif Khan, President LBMA *Exploring Strategy* Frontiers Media SA This book identifies and explains the different national approaches to data protection – the legal regulation of the collection, storage, transmission and use of information concerning identified or identifiable individuals – and determines the extent to which they could be harmonised in the foreseeable future. In

recent years, data protection has become a major concern in many countries, as well as at supranational and international levels. In fact, the emergence of computing technologies that allow lower-cost processing of increasing amounts of information, associated with the advent and exponential use of the Internet and other communication networks and the widespread liberalization of the trans-border flow of information have enabled the large-scale collection

and processing of personal data, not only for scientific or commercial uses, but also for political uses. A growing number of governmental and private organizations now possess and use data processing in order to determine, predict and influence individual behavior in all fields of human activity. This inevitably entails new risks, from the perspective of individual privacy, but also other fundamental rights, such as the right not to be discriminated against, fair

competition between commercial enterprises and the proper functioning of democratic institutions. These phenomena have not been ignored from a legal point of view: at the national, supranational and international levels, an increasing number of regulatory instruments – including the European Union’s General Data Protection Regulation applicable as of 25 May 2018 – have been adopted with the purpose of preventing personal data misuse.

Nevertheless, distinct national approaches still prevail in this domain, notably those that separate the comprehensive and detailed protective rules adopted in Europe since the 1995 Directive on the processing of personal data from the more fragmented and liberal attitude of American courts and legislators in this respect. In a globalized world, in which personal data can instantly circulate and be used simultaneously in communications networks

that are ubiquitous by nature, these different national and regional approaches are a major source of legal conflict.

**How Incumbent Firms Navigate Nascent Digital Platform Ecosystems in the Internet of Things**

IGI Global

From the perspective of commercial and non-commercial organizations, this monograph with contemporary organizational and management problems, focus on four thematic areas. Traditionally, the

first one is concentrating the reader's attention on the internal aspects of the organization's functioning as an object of research. In this regard, articles related to the concept of corporate social responsibility in two ways: organizational research and bibliometric analysis. The authors used an analogical (bibliometric) approach to examine trends in publishing for the concept of learning organizations. In this part of the discussion, the social aspect has been strongly displayed, also

thanks to the social capital and enterprise. Another topic in this section is the role of the workers' knowledge in creating innovative solutions, emphasizing the role of trust and culture-rich collaboration between employees, employees' participation in creating projects, and organizational change. In addition, it discusses the role of information and knowledge networks and sharing knowledge among employees, which does remain without influence on the shaping of

individual employees' careers. Slightly different from the other articles, though set in this section, there is an article referring to the organizational pathology. These considerations are much more valuable, usually because of the difficult access to negative information. The next section presents articles in the context of the modern tools used in the management of commercial and non-commercial organizations. This part of the discussion starts an article about

forecasting methods and modern models of business management. In opposition to these considerations, the problem of unused, modern management methods in the local government sector, remains valid. Also, it refers to social media as a source of customer knowledge and management control, which should be considered as a strong and innovative determinant influencing the development of contemporary

management methods of a modern enterprise. Interesting considerations are included in the article on the process management, with emphasis on the dynamic management of business processes and IT systems that go with it. The other articles present the concepts of the risk management model in a technology project, business model used in franchising, and the concept of accountability in conjunction with the development of innovation thanks to

negotiating the role of intellectual capital. The modern market economy forces organizations to develop their ability to adapt to the conditions by improving their organization continually. It shows how modern-day commercial and non-commercial organizations are competing in a competitive market. This section opens the article, referring to the social competences of students developed during their studies and the competences of the future, which were

studied and compared in two universities. The integral part of the organization's functioning of the organization in the environment is their broadly understood cooperation for the implementation of the objectives and achieving a competitive advantage in the market. This trend covers articles referring to the participation of county in networking, modeling synergistic interrelations within the business association, or the conditions that should be met between enterprises

and institutions supporting the technological development of the organization. Other considerations concern customer preferences concerning their choice of commercial banks, the factors that determine the choice of financial instruments by small and medium enterprises, or the demands of sustainable family business development. The final part of the articles is related to a broader perspective, and so the functioning of the

organization from a sectoral perspective and across industries. A distinctive feature is a sectoral approach to knowledge-based business services, the determinants of knowledge-based products in the pharmaceutical industry, and the behavior of competing companies in the chocolate and confectionery industry. A separate topic in this section is the concept of capturing value or the value in a sectoral approach. The issues

related to the protection of personal data in the healthcare sector, patent activity of enterprises in the technology park, as well as the management of resources in the cluster. The prepared monograph is an interdisciplinary compendium of knowledge on the functioning of both commercial and non-commercial organizations in the context of three perspectives: micro, meso, and macro. The advantage of this type of studies is modern and up-

to-date look at the problems of management, organization behavior, or the functioning of the organizations in the sector.

### **The Data Industry**

Springer

The ability of

organisations to

cyberconnect is becoming

increasingly important for

superior performance.

Cyberconnecting: The

Three Lenses of Diversity

by Dr Priya E. Abraham

explains how to establish connections across technological, cultural and social boundaries, mirrored in organisations succeeding in today's hybrid business world.

Some companies create and innovate technology;

others use and adopt it;

but in the cyberage, both must closely interconnect

tech with human

behaviour. Face-to-face

and cyber-interactions are

at the heart of effective

work-based relationships,

which in turn increase

organisational

performance. To build

these effective business relations, organisations must foster the discovery muscle - curiosity combined with skills - in individuals. Priya E. Abraham shows how seemingly opposing domains (technology, business anthropology and diversity) best leverage interactions for the benefit of organisation development, using findings from practitioner-

focused research conducted when leading complex cross-boundary projects in the telecommunications and mobile learning industries. Tools from business anthropology help uncover people's diverse needs and expectations in a cyberconnected world. Identity portfolios need reflection in development solutions of face-to-face and mobile applications. Solutions uncovered by

qualitative research methods help close the gap between human behaviour and tech to engage internal and external stakeholders. The book presents a much-needed strategic framework required for cyberconnecting: 'The Three Lenses of Diversity', designed to organise thinking in the navigation of technological, cultural, and social boundaries.
