Since its creation in 1884, Engineering Index has covered virtually every major engineering innovation from around the world. It serves as the historical record of virtually every major engineering innovation of the 20th century. Recent content is a vital resource for current awareness, new production information, technological forecasting and competitive intelligence. The world's most comprehensive interdisciplinary engineering database, Engineering Index contains over 10.7 million records. Each year, over 500,000 new abstracts are added from over 5,000 scholarly journals, trade magazines, and conference proceedings. Coverage spans over 175 engineering disciplines from over 80 countries. Updated weekly.

This book explores the economic and business history of the British machine tool industry through the rise and fall of its leading player, Alfred Herbert Ltd, providing a valuable insight into a key British manufacturing industry, and contributing to the debate over Britain's alleged decline as a manufacturing nation.

PRINCIPLES OF TOOL ENGINEERING

Business Information Agency
Next to turning, the most valuable use of the lathe is for milling operations, either using the lathe itself to drive the cutters or by extending its scope by adding a separate milling attachment. This book provides a thorough and practical discourse on how to use the lathe for all types of milling work.
