Rule-based systems and Knowledge Engineering A Rule Based Language For Rule-based languages Rule-based languages instantiate rules when activated by conditions in a set of data. Of all possible activations, some set is selected and the statements belonging to those rules execute. List of programming languages by type - Wikipedia 1. A rule-based language, programs are composed by a set of rules. Each rule has two parts, respectively called the head that represents consequence and the body that represents premises. A rule-based system attempts to derive execution instructions from a starting set of data and rules. What is Rule-Based Languages | IGI Global In computer science, a rule-based system is used to store and manipulate knowledge to interpret information in a useful way. It is often used in artificial intelligence applications and research. Normally, the term rule-based system is applied to systems involving human-crafted or curated rule sets. Rule-based systems constructed using automatic rule inference, such as rule-based machine learning, are normally excluded from this system type. Rule-based system - Wikipedia RC++ is based on OPS5 (Forgy, 81) and Poprulebase1, a rule-based extension to the Pop-11 programming language. It combines optimised execution associated with OPS5 with the syntactical style and some of the useful features of Poprulebase. It is designed to facilitate the rapid creation of game AI by automating many of the common programming ... RC++: a rule-based language for game AI - University of ...
