This unique, concise ready reference for daily use collates for the first time the most useful, practical and simple assessment scales used in geriatric settings. It provides tools to identify clinical conditions and health outcomes objectively and reliably. It is essential as a clinical primer and everyday reference guide for all practising and training members of multidisciplinary teams, including consultants and doctors in specialist training, career grade doctors and general practitioners, and medical students; nurses, health visitors, dieticians, and social workers; allied health professionals such as physiotherapists, occupational therapists, speech and language therapists; and managers of elderly care services. 'Assessment is central to the practice of Geriatric Medicine. All members of the multidisciplinary team require a sound knowledge of the basic principles of measurement scales. We need to be competent in using and selecting appropriate scales, understanding which scales are valid and fit for purpose. Unfortunately, up to now, this has been a difficult task often requiring reference to original papers. Dr Gupta's scholarship has come to the rescue. He has trawled through the many hundreds of scales available selecting those most useful for the specialty. This book will be valuable to all members of the multidisciplinary team. Dr Gupta has done an excellent job outlining the theory and practice of measurement scales. He has put together an extremely useful compendium of scales. I congratulate him and wish his publication every success. I can foresee this publication becoming an essential text for every unit library and valuable book for individual clinicians.' - Dr Jeremy Playfer in his Foreword. 'This book summarises the most commonly used validated assessment scales which can be used by medical students, postgraduate trainees, consultants and the multi-disciplinary team members. I hope a copy of this book will be kept on every ward, outpatient department and GP practice for daily use and reference' - Professor Bim Bhowmick OBE in his Foreword.

A practical textbook, based on a problem-oriented workflow, that will improve patients' likelihood of full recovery from stroke and prevent future strokes from occurring Stroke is the leading cause of adult disability and is in the top five causes of death globally. Warlow's *Stroke: Practical Management, 4th Edition* takes a problem-oriented approach and addresses the questions posed by a stroke patient in the order they are likely to present in clinical practice, for instance, 'Is it a stroke?', 'What sort of stroke?', 'What caused it?', and 'What can be done about it?'. Beginning with chapters phrased as questions, the book walks the reader through a standard clinical workflow, exploring the practical skills and assessment required at each stage of patient management. Early chapters cover: locating the vascular lesion, identifying the involved arterial territory, the role imaging should play, and the application thereof. Subsequent chapters look at what causes a transient or persistent ischemic event, an intracerebral hemorrhage and a subarachnoid hemorrhage. Unusual causes of ischemic stroke and transient ischemic attack are also covered. The book then presents a practical approach to the management of stroke and transient ischemic attack; offers specific treatments for acute ischemic stroke and aneurysmal subarachnoid hemorrhage; provides ways for professionals to prevent first or recurrent stroke; and more. Final chapters of the book discuss rehabilitation after stroke, how patients and carers can be supported in the short term and long term, prevention of recurrent stroke, and the organization of stroke services.

Warlow's Stroke: Practical Management, 4th Edition Follows clinical workflow for stroke analysis Features evidence-based approach throughout Offers practical application aimed at improving patient outcomes Written and edited by internationally renowned experts in the field An essential resource for all practitioners involved in the care of patients who suffer from cerebrovascular disease, but particularly suitable for neurologists, residents, geriatricians, stroke physicians, radiologists and primary care physicians.
