In the late fifteenth century, the production of print editions of Claudius Ptolemy's second-century Geography sparked one of the most significant intellectual developments of the era—the production of mathematically-based, north-oriented maps. The production of world maps in England, however, was notably absent during this "Ptolemaic revival." As a result, the impact of Ptolemy's text on English geographical thought has been obscured and minimalized, with scholars speculating a possible English indifference to or isolation from European geographic developments. Tracing English geographical thought through the material culture of literary and popular texts, this study provides evidence for the reception and transmission of Ptolemaic-based geography in England during a critical period of geographic innovation and synthesis, one that laid the foundation for modern geographical representation. With evidence from prose romance, book illustration, theatrical performance, cosmological ceilings, and almanacs, *Mirror of the World* proposes a new, interdisciplinary literary and cartographic history of the influence of Ptolemaic geography in England, one that reveals the lively integration of geographic concepts through narrative and non-

cartographic visual forms.

BIOBIBLIOGRAPHICAL STUDIES

SAGE

Ever since humans sketched primitive maps in the dirt, the quest to understand our surroundings has been fundamental to our survival. Studying geography revealed that the earth was round, showed our ancestors where to plant crops, and helped them appreciate the diversity of the planet. Today, the world is changing at an unprecedented pace, as a result of rising sea levels, deforestation, species extinction, rapid urbanization, and mass migration. Modern technologies have brought people from across the globe into contact with each other, with enormous political and cultural consequences. As a subject concerned with how people, environments, and places are organized and interconnected, geography provides a critical window into where things happen, why they happen where they do, and how geographical context influences environmental processes and human affairs. These perspectives make the study of geography more relevant than ever, yet it remains little understood. In this engrossing book, Alexander B. Murphy explains why geography is so important to the current moment.

AN INTRODUCTORY SURVEY

Elsevier

In any edited volume most credit is due to the individual authors. The present case is no exception and we as editors have done little apart from serving as coordinators for a group of friends and colleagues. For once, the responsibilities are shared. We feel that the collection gives a fair representation of the activities at the frontier of human geography in North America. Whether these premonitions will be further substantiated is of course to be seen. In the meantime, we take refuge in Vico's saying that "doctrines must take their beginning from that of the matter of which they treat". And yet we also know that new treatments never lead to final ends, but rather to new doctrines and to new beginnings. It is also a pleasure to acknowledge those publishers and authors who have given permission to reprint copyrighted materials:

The Lobotomist's Wife Fundamentals of Geographical Thought Fundamentals of Geographical Thought Evolution of Geographical Thought This book covers a wide canvas of the story of geographical thoughts, ideas, and knowledge, from the early Greek period to modern contemporary geography. Presenting an introduction to the philosophy, history, and methodology of geography, the book maps the intellectual changes in the discipline over the years. To keep students abreast with the recent trends in geography, along with its methodological problems, the book has been updated and revised, making it a comprehensive textbook on geographical thought. The main objective of the sixth edition is to incorporate a number of relevant new topics and concepts which will expand the geographical base of interested students about the philosophy

and methodology of geography. The book is presented in a larger format with improved maps and illustrations. A new chapter introduces students to a contemporary sub-discipline of Feminist Geography. Also included is a comprehensive list of biographic notes on selected geographers. [Subject: Geography] **GEOGRAPHICAL THOUGHT : A CONTEXTUAL HISTORY OF IDEAS**

Economic and Social Geography reviews developments in the study of economic and social geography and brings together in a single volume work which is dispersed in many specialist textbooks. An attempt has been made to achieve a balance between oversimplification and over-elaboration, and to present essential concepts in a clear, concise manner. The book contains 25 chapters organized into five parts. Part One deals with the study of economic and social geography, including approaches to the study of human geography and environmental perception and behavior. Part Two on population geography covers topics such as population geography, population change, and population growth. Part Three on economic geography includes discussions of transportation, agriculture, and mineral resources. Part Four on settlement geography examines urbanization, the internal structure of towns and cities, and rural settlement. Part Five is devoted to urban and rural planning, problems of economic development, and resources. This book, together with its companion volume, *Physical Geography Made Simple*, should be of value to a variety of people. First, to those who are coming to academic geography for the first time, especially to those studying for GCE Advanced Level or ONC/OND examinations. It should also provide a concise introduction to first-year courses in further and higher education, including degree courses with a geography component, HNC/HND, and Certificate in Education courses.

Richard Peet looks in detail at the main trends in human geographic thought over the last thirty years, relating these to broader themes in philosophy and social theory. Beginning with existential phenomenology and humanistic geography, the book covers Marxism and radical geography, structuralism, structuration theory, realism, locality studies, various streams of poststructuralism and postmodernism, and feminism. Each chapter examines a few theories in depth, concentrating on the major works and the nature of their contribution. Many of the

ideas covered are dense and complex, but the reader is drawn gradually into the text through notions understandable to students. After spending time with this book the reader should be able to tackle virtually any philosophical theme in contemporary geographic thought. The book will be central to courses in geographical thought and the history of geographical thought, and as part of virtually all courses in human geography which entail philosophy and theory.

Economic and Social Geography Lake Union Publishing

Written by a leading geographer of climate, this book offers a unique guide to students and general readers alike for making sense of this profound, far-reaching, and contested idea. It presents climate change as an idea with a past, a present, and a future. In ten carefully crafted chapters, *Climate Change* offers a synoptic and inter-disciplinary understanding of the idea of climate change from its varied historical and cultural origins; to its construction more recently through scientific endeavour; to the multiple ways in which political, social, and cultural movements in today's world seek to make sense of and act upon it; to the possible futures of climate, however it may be governed and imagined. The central claim of the book is that the full breadth and power of the idea of climate change can only be grasped from a vantage point that embraces the social sciences, humanities, and natural sciences. This vantage point is what the book offers, written from the perspective of a geographer whose career work on climate change has drawn across the full range of academic disciplines. The book highlights the work of leading geographers in relation to climate change; examples, illustrations, and case study boxes are drawn from different cultures around the world, and questions are posed for use in class discussions. The book is written as a student text, suitable for disciplinary and inter-disciplinary undergraduate and graduate courses that embrace climate change from within social science and humanities disciplines. Science students studying climate change on inter-disciplinary programmes will also benefit from reading it, as too will the general reader looking for a fresh and distinctive account of climate change.
