Craig Deegan's Financial Accounting Theory provides a concise approach while comprehensively covering both traditional and contemporary theories that have emerged as the practice of accounting has evolved. Social and environmental accountability and reporting issues are discussed in depth, along with coverage of critical perspectives, public sector accounting and fair value. Instructors and students value Financial Accounting Theory for its reader-friendly style using straightforward explanations and numerous practical examples. This new edition continues to follow this approach with the addition of *NEW* content focusing on how different perspectives of organisational responsibilities and 'accountabilities' impact the way accounting is performed, and the theories that different researchers choose to use/apply.

"Introductory Financial

Accounting, 9e" provides a unique and perfect blend of robust financial statement analysis with early statement of cash flows coverage. It is directed at those who will analyze real financial statements, and make business decisions based upon that analysis. Real statements are used throughout (Starbucks). Statement of Cash Flows comes earlier in this book than most. Material is focused on analysis of financial statements -- ratios introduced early and often, special "Portfolio" section provides a "road map" to financial statement analysis, and special section in end-of-chapter problems focuses on analyzing financial statements (using Starbucks financial statements). Features strong coverage of statement of cash flows (Ch 5) --an essential financial statement, one of growing importance, and should be regarded as a basic statement. For financial accountants.
