This book provides a critical assessment of the contemporary global food system in light of the heightening food crisis, as evidence of its failure to achieve food security for the world's population. A key aspect of this failure is identified in the neoliberal strategies which emphasize industrial efficiencies, commodity production and free trade-ideologies that

underlie agricultural and food policies in what are frequently referred to as 'developed countries'. The book examines both the contradictions in the global food system as well as the implications of existing ideologies of production associated with commodity industrial agriculture using evidence from relevant international case studies. The book's first section presents the context of the food crisis with contributions from leading international academics and food policy activists, including climate scientists, ecologists

and social scientists. These contributions identify current contradictions in policy and practice that impede solutions to the food crisis. Set within this context, the second section assesses current conditions in the global food system, including economic viability, sustainability and productivity. Case study analyses of regions exposed to neoliberal policy at the production end of the system provide insights into both current challenges to feeding the world, as well as alternative strategies for creating a more just and moral food system.

Introduction to Managerial Accounting,
4/e by Brewer/Garrison/Noreen is based

on the market-leading text, Managerial Accounting, by Garrison, Noreen and Brewer. However, this is not simply a briefer book with chapters removed; B/G/N has been rethought and retooled to meet the needs of the market. B/G/N 4/e is a more accessible, yet thoroughly student-friendly text that satisfies the basic needs of the managerial accounting student without unnecessary depth on advanced topics associated with the follow-up course: cost accounting/cost management. Faculty and students alike will find this new edition has retained the hallmark features of the Garrison brand: author-written supplements, excellent readability, terrific examples, and balanced end-of-chapter material.

Operations Management in the Supply Chain: Decisions and Cases is an ideal book for the instructor seeking a short text with cases. This book employs a cross-functional perspective that emphasizes strategy and critical thinking, appealing to non-majors and practical for use in an MBA level or undergraduate course in operations management. The size and focus of the book also make the text attractive for the cross-functional curriculum where students are required to purchase more than one text. The sixteen cases offer variety in length and rigor; and several are from Ivey, Stanford, and Darden. This mix makes the book appropriate for

both undergraduates and MBA students.

Build a Better Brain at Any Age

Human health depends on the health of the planet. Earth's natural systems--the air, the water, the biodiversity, the climate--are our life support systems. Yet climate change, biodiversity loss, scarcity of land and freshwater, pollution and other threats are degrading these systems. The emerging field of planetary health aims to understand how these changes threaten our health and how to protect ourselves and the rest of the biosphere. Interdisciplinary in nature, Planetary Health explores how accelerating environmental change affects each dimension of human health. It then turns to the rich terrain of solutions, reimagining our cities, our

food systems, our energy sector, the chemicals we use, even our economics and our ethics. The result is a comprehensive and optimistic introduction to a field that is being adopted by researchers and universities around the world.

This unique and comprehensive book presents a unifying paradigm for understanding operations, based in the belief that a large part of operations management is the design and management of business processes. The overall objective of the book is to demonstrate how managers can control process structure and process drivers to achieve desired business process performance. This framework is applied

to understand which levels managers have to control: cycle time, capacity, inventory, and quality. Providing a conceptual and logically rigorous approach, *Managing Business Process Flows* discusses the subject in three steps: model and understand the process and its flows; study causal relationships between process structure and certain performance metrics; and formulate implications for managerial actions by filtering out managerial levers ("process drivers") and their impact on process performance. The book also identifies managerial levers, and establishes a connection between operational and financial measurements. An essential resource for all management professionals, especially Management Consultants specializing in

operations and supply chains, Managers and VPs overseeing supply chains, and Plant Managers. ȳ

The author of Self-Compassion follows up her groundbreaking book with new ideas that expand our notion of self-kindness and its capacity to transform our lives, showing women how to balance tender self-acceptance with fierce action to claim their power and change the world. Kristin Neff changed how we talk about self-care with her enormously popular first book, Self-Compassion. Now, ten years and many studies later, she expands her body of work to explore a brand-new take on self-compassion. Although kindness and

self-acceptance allow us to be with ourselves as we are, in all our glorious imperfection, the desire to alleviate suffering at the heart of this mindset isn't always gentle, sometimes it's fierce. We must also act courageously in order to protect ourselves from harm and injustice, say no to others so we can meet our own needs, and motivate necessary change in ourselves and society. Gender roles demand that women be soft and nurturing, not angry or powerful. But like yin and yang, the energies of fierce and tender self-compassion must be balanced for wholeness and wellbeing. Drawing on a wealth of research, her personal life story and empirically supported practices, Neff demonstrates how women can use fierce and tender self-

compassion to succeed in the workplace, engage in caregiving without burning out, be authentic in relationships, and end the silence around sexual harassment and abuse. Most women intuitively recognize fierceness as part of their true nature, but have been discouraged from developing it. Women must reclaim their power in order to create a healthier society and find lasting happiness. In this wise, caring, and enlightening book, Neff shows women how to reclaim balance within themselves, so they can help restore balance in the world.

A Nocturne Falls Mystery Penguin
This book fills a significant gap in the critical conversation on race in media by extending interrogations of racial

colorblindness in American television to the industrial practices that shape what we see on screen. Specifically, it frames the practice of colorblind casting as a potent lens for examining the interdependence of 21st century post-racial politics and popular culture. Applying a 'production as culture' approach to a series of casting case studies from American primetime dramatic television, including ABC's Grey's Anatomy and The CW's The Vampire Diaries, Kristen Warner complicates our understanding of the cultural processes that inform casting and expounds the aesthetic and pragmatic industrial viewpoints that perpetuate limiting or downright exclusionary hiring norms. She also examines the material effects of actors

of color who knowingly participate in this system and justify their limited roles as a consequence of employment, and finally speculates on what alternatives, if any, are available to correct these practices. Warner's insights are a valuable addition to scholarship in media industry studies, critical race theory, ethnic studies, and audience reception, and will also appeal to those with a general interest in race in popular culture.

Can your software sell itself? Convention and the trillion-dollar sales industry claim that it's impossible for your product to sell itself. Yet successful software businesses like Slack, Dropbox, Atlassian, and HubSpot make millions selling to customers who never once reached out to a sales rep. In *Product-Led Growth: How to Build a Product That Sells Itself*, growth consultant Wes Bush challenges the traditional SaaS marketing and sales playbook and introduces a completely new way to sell

products. Bush reveals how your product--not expensive sales teams--can be the main vehicle to acquire, convert, and retain customers. In this step-by-step guide to Product-Led Growth, Bush explains: Why you should flip the traditional sales process on its head and turn your product into a sales machine; How to decide whether your business should use a free trial, freemium, or hybrid model; How to turn free users into happy, paying customers. History tells us that "how" you sell is just as important as "what" you sell. Blockbuster couldn't compete with Netflix by selling the same digital content, and you need to decide "when" not "if" you'll innovate on the way you sell. Are you going to be product-led? Or will you be disrupted, too?

Decisions and Cases Chronicle Books
Selected as one of NPR's Best Books of 2016, this book offers superior learning tools for teachers and students, from A to Z. An explosive growth in research on how people learn has revealed many ways to improve teaching and catalyze learning at all ages. The purpose of this book is to present this new science of learning so that educators can creatively translate the science into exceptional practice. The book is highly appropriate for the preparation and professional development of teachers and college

faculty, but also parents, trainers, instructional designers, psychology students, and simply curious folks interested in improving their own learning. Based on a popular Stanford University course, *The ABCs of How We Learn* uses a novel format that is suitable as both a textbook and a popular read. With everyday language, engaging examples, a sense of humor, and solid evidence, it describes 26 unique ways that students learn. Each chapter offers a concise and approachable breakdown of one way people learn, how it works, how we know it works, how and when to use it, and what mistakes to avoid. The book presents learning research in a way that educators can creatively translate into exceptional lessons and classroom

practice. The book covers field-defining learning theories ranging from behaviorism (R is for Reward) to cognitive psychology (S is for Self-Explanation) to social psychology (O is for Observation). The chapters also introduce lesser-known theories exceptionally relevant to practice, such as arousal theory (X is for eXcitement). Together the theories, evidence, and strategies from each chapter can be combined endlessly to create original and effective learning plans and the means to know if they succeed.

The inspiring, unlikely, laugh-out-loud story of how one woman learned to lead—and how she ultimately succeeded, not despite her many mistakes, but

because of them. This is the story of how Kristen Hadeed built Student Maid, a cleaning company where people are happy, loyal, productive, and empowered, even while they're mopping floors and scrubbing toilets. It's the story of how she went from being an almost comically inept leader to a sought-after CEO who teaches others how to lead. Hadeed unintentionally launched Student Maid while attending college ten years ago. Since then, Student Maid has employed hundreds of students and is widely recognized for its industry-leading retention rate and its culture of trust and accountability. But Kristen and her company were no overnight sensation. In fact, they were almost nothing at all. Along the way, Kristen got it wrong almost as often as she got it right. Giving

out hugs instead of feedback, fixing errors instead of enforcing accountability, and hosting parties instead of cultivating meaningful relationships were just a few of her many mistakes. But Kristen's willingness to admit and learn from those mistakes helped her give her people the chance to learn from their own screwups too. Permission to Screw Up dismisses the

idea that leaders and organizations should try to be perfect. It encourages people of all ages to go for it and learn to lead by acting, rather than waiting or thinking. Through a brutally honest and often hilarious account of her own struggles, Kristen encourages us to embrace our failures and proves that we'll be better leaders when we do.
