A follow-up to Excel Outside the Box, More Excel Outside the Box is designed with the Excel guru in mind, introducing advanced, creative solutions and hacks for the software's most challenging problems. Through a series of more than 30 techniques, tables, formulas, and charts, this guide details processes that may be used in any Excel application and across all disciplines. Creative approaches for building formulas within formulas, pivot tables, conditional formatting, and mastering array formulas are just some of the numerous challenges explained. Other higher-level solutions discussed include using VBA macro code to override cell calculations, solve for sums from a text string, and trimming and cleaning all cells on a worksheet. This is the all-encompassing resource for advanced users of Excel wanting to learn more techniques to broaden and empower their knowledge of the program.

Teaches the basic, yet all-important, data skills required by today's media professionals The authors of Data Skills for Media Professionals have assembled a book that teaches key aspects of data analysis, interactive data visualization and online map-making through an introduction to Google Drive, Google Sheets, and Google My Maps, all free, highly intuitive, platform-agnostic tools available to any reader with a computer and a web connection. Delegating the math and design work to these apps leaves readers free to do the kinds of thinking that media professionals do most often: considering what questions to ask, how to ask them, and how to evaluate and

communicate the answers. Although focused on Google apps, the book draws upon complementary aspects of the free QGIS geographic information system, the free XLMiner Analysis ToolPak Add-on for Google Sheets, and the ubiquitous Microsoft Excel spreadsheet application. Worked examples rely on frequently updated data from the U.S. Bureau of Labor Statistics, the Federal Election Commission, the National Bridge Inventory of structurally deficient bridges, and other federal sources, giving readers the option of immediately applying what they learn to current data they can localize to any area in the United States. The book offers chapters covering: basic data analysis; data visualization; making online maps; Microsoft Excel and pivot tables; matching records with Excel's VLOOKUP function; basic descriptive and inferential statistics; and other functions, tools and techniques. Serves as an excellent supplemental text for easily adding data skills instruction to courses in beginning or advanced writing and reporting Features computer screen captures that illustrate each step of each procedure Offers downloadable datasets from a companion web page to help students implement the techniques themselves Shows realistic examples that illustrate how to perform each technique and how to use it on the job Data Skills of Media Professionals is an excellent book for students taking skills courses in the more than 100 ACEJMC-accredited journalism and mass communication programs across the United States. It would also greatly benefit those enrolled in advanced or specialized reporting courses, including courses dedicated solely to teaching data skills.

Designed with Excel gurus in mind, this handbook outlines how to create formulas that can be used to solve everyday problems with a series of data values that standard Excel formulas cannot or would be too arduous to attempt. Beginning with an introduction to array formulas, this manual examines topics such as how they differ from ordinary formulas, the benefits and drawbacks of

their use, functions that can and cannot handle array calculations, and array constants and functions. Among the practical applications surveyed include how to extract data from tables and unique lists, how to get results that match any criteria, and how to utilize various methods for unique counts. This book contains 529 screen shots.

Help your students to think critically and creatively through team-based problem solving instead of focusing on testing and outcomes. Professionals throughout the education system are recognizing that standardized testing is holding students back. Schools tend to view children as outcomes rather than as individuals who require guidance on thinking critically and creatively. Awesome Math focuses on team-based problem solving to teach discrete mathematics, a subject essential for success in the STEM careers of the future. Built on the increasingly popular growth mindset, this timely book emphasizes a problem-solving approach for developing the skills necessary to think critically, creatively, and collaboratively. In its current form, math education is a series of exercises: straightforward problems with easily-obtained answers. Problem solving, however, involves multiple creative approaches to solving meaningful and interesting problems. The authors, co-founders of the multi-layered educational organization AwesomeMath, have developed an innovative approach to teaching mathematics that will enable educators to: Move their students beyond the calculus trap to study the areas of mathematics most of them will need in the modern world Show students how problem solving will help them achieve their educational and career goals and form lifelong communities of support and collaboration Encourage and reinforce curiosity, critical thinking, and creativity in their students Get students into the growth mindset, coach math teams, and make math fun again Create lesson plans built on problem based learning and identify and develop educational resources in their schools Awesome Math: Teaching Mathematics with Problem Based Learning is a must-have resource for general education teachers and math specialists in grades 6 to 12, and resource specialists, special education teachers, elementary educators, and other primary education professionals.

His fans have spoken, but despite their requests, Peter Davison has gone ahead and written his autobiography anyway. It wasn't the book they tried to stop - it was more like the book they didn't want him to start. An aspiring singer-songwriter, once dubbed Woking's answer to Bob Dylan (by his mum, who once heard a Bob Dylan song), Peter actually penned a hit for Dave Clark but soon swapped a life on the pub circuit to tread the boards. From colonial roots - his dad was Guyanese and his mother was born in India - the family settled in Surrey where Peter's academic achievements were unspectacular - he even managed to fail CSE woodwork, eliciting a lament from his astonished teacher ('All you have to do is recognise wood!'). Despite this, Peter has secured his place in science fiction history, becoming the fifth Doctor Who, although he nearly turned down the role. The Time Lord connection continued with the marriage of his daughter Georgia to Dr Who number ten, David Tennant. The artist formerly known as Peter Malcolm Gordon Moffett has starred in a number of television series including Love for Lydia, A Very Peculiar Practice, At Home with the Braithwaites and The Last Detective and became a national treasure for having his arm up a cow in his role as Tristan Farnon in All Creatures Great and Small. He was also in a Michael Winner movie... He made his first stage appearance with an amateur dramatic company, but The Byfleet Players' loss was the West End's gain as he now has a number of musicals to his name, including Legally Blonde, Chicago and Spamalot. Most recently he starred in the box office record-breaking Gypsy where he rubbed shoulders backstage with Dames Meryl Streep, Maggie Smith and Judi Dench - all asking him for directions to Imelda Staunton's dressing room. One thing is for sure: of all the British screen and stage actors of the last fifty years, Peter Davison is certainly one of them and, within these pages, intrepid readers will at last have the dubious honour of sharing in his life and times - as he despairs over whether there truly ever can be life outside the box.
