Aboriginal people are grossly over-represented before the courts and in our gaols. Despite numerous inquiries, State and Federal, and the considerable funds spent trying to understand this phenomenon, nothing has changed. Indigenous people continue to be apprehended, sentenced, incarcerated and die in gaols. One part of this depressing and seemingly inexorable

process is the behaviour of police. Drawing on research from across Australia, Chris Cunneen focuses on how police and Aboriginal people interact in urban and rural environments. He explores police history and police culture, the nature of Aboriginal offending and the prevalence of over-policing, the use of police discretion, the particular circumstances of Aboriginal youth and Aboriginal women, the experience of community policing and the key police responses to Aboriginal issues. He traces the pressures on both sides of the equation brought by new political demands. In exploring these issues, *Conflict, Politics and Crime* argues that changing the nature of contemporary relations between Aboriginal people and the police is a key

to altering Aboriginal over-representation in the criminal justice system, and a step towards the advancement of human rights.

The undergraduate years are a turning point in producing scientifically literate citizens and future scientists and engineers. Evidence from research about how students learn science and engineering shows that teaching strategies that motivate and engage students will improve their learning. So

how do students best learn science and engineering? Are there ways of thinking that hinder or help their learning process? Which teaching strategies are most effective in developing their knowledge and skills? And how can practitioners apply these strategies to their own courses or suggest new approaches within their departments or institutions? "Reaching Students" strives to answer these questions. "Reaching Students" presents the best thinking to date on teaching and learning undergraduate science and engineering. Focusing on the disciplines of astronomy, biology, chemistry, engineering, geosciences, and physics, this book is an introduction to strategies to try in your classroom or institution. Concrete examples and case studies

illustrate how experienced instructors and leaders have applied evidence-based approaches to address student needs, encouraged the use of effective techniques within a department or an institution, and addressed the challenges that arose along the way. The research-based strategies in "Reaching Students" can be adopted or adapted by instructors and leaders in all types of public or private higher education institutions. They are designed to work in introductory and upper-level courses, small and large classes, lectures and labs, and courses for majors and non-majors. And these approaches are feasible for practitioners of all experience levels who are open to incorporating ideas from research and reflecting on their teaching practices.

This book is an essential resource for enriching instruction and better educating students.

The Way to Rainy Mountain recalls the journey of Tai-me, the sacred Sun Dance doll, and of Tai-me's people in three unique voices: the legendary, the historical, and the contemporary. It is also the personal journey of N. Scott Momaday, who on a pilgrimage to the grave of his Kiowa grandmother traversed the same route taken by his forebears and in so doing confronted his Kiowa heritage. It is an evocation of three things in particular: a landscape that is incomparable, a time that is gone forever, and the human spirit, which

endures. Celebrating fifty years since its 1969 release, this new edition offers a moving new preface and invites a new generation of readers to explore the Kiowa myths, legends, and history with Pulitzer Prize-winning author N. Scott Momaday.
