Presenting Showcase
500 Paper Objects , the
latest addition to our
bestselling 500 Series !
This exciting collection
of contemporary paper
crafts--including
origami, kirigami, and
papier-mch --features
some of the world's
most renowned artists.

Programming for Computations -

Python Springer

This is a working
camera that pops up
from the pages of a
book..The book

concisely explains--and
actively demonstrates--
how a structure as
humble as a folded
piece of paper can tap
into the intrinsic
properties of light to
produce a
photograph.The book
includes:- a piece of
paper folded into a
working 4x5" camera-
a lightproof bag- 5
sheets of photo-paper
"film"- development
instructions (from
complete DIY to
"outsource it")- a foil-
stamped cover- a
satisfying
demonstration of the
connection between
design & science /
structures & functions

Books* The Art of Pop-
UpThe Magical World
of Three-Dimensional

BooksShowcases the designs of pop-up creators from around the world, offering examples on how to construct them.Complete Pleats Here at last is the definitive book on how to make a pop-up. Every aspect of the creation of a pop-up, known as paper engineering, is clearly and thoroughly covered. All types of parallel folds, angle folds, wheels, and pull tabs are accurately detailed verbally and visually, flat and in dimension. Also included is a history of pop-ups and a step-by-step photographic essay on how a pop-up is made from start to finish. This guided tour is perfect for aspiring pop-up creators, paper engineers, students, and appreciators of

this unique art form. *New Directions in Paper Art* Getty Publications This book is a must-have for anyone serious about rendering in real time. With the announcement of new ray tracing APIs and hardware to support them, developers can easily create real-time applications with ray tracing as a core component. As ray tracing on the GPU becomes faster, it will play a more central role in real-time rendering. Ray Tracing Gems provides key building blocks for developers of games, architectural applications, visualizations, and more. Experts in rendering share their knowledge by explaining everything

from nitty-gritty techniques that will improve any ray tracer to mastery of the new capabilities of current and future hardware. What you'll learn: The latest ray tracing techniques for developing real-time applications in multiple domains Guidance, advice, and best practices for rendering applications with Microsoft DirectX Raytracing (DXR) How to implement high-performance graphics for interactive visualizations, games, simulations, and more Who this book is for: Developers who are looking to leverage the latest APIs and GPU technology for real-time rendering and ray tracing Students looking to learn about best practices in these areas Enthusiasts who

want to understand and experiment with their new GPUs

NAKFI'S 15 YEARS IGNITING INNOVATION AT THE INTERSECTIONS OF DISCIPLINES

CRC Press
Elegant and accessible, this interactive handbook teaches crafters of all ages how to create kinetic paper art. The projects are complete with examples, formulas, and the essential instruction that allows them to be constructed directly from the book with simple materials on hand: paper, scissors, and glue. Pop-ups are grouped by type--box or triangle--and as the chapters progress, the techniques are combined and layered

for more dramatic effects. With its thorough explanations and inspiring ideas, this book will bring color and motion to crafters' cards, scrapbooks, and invitations.

The Scaffold Babelcube Inc.

Paper is readily available and inexpensive in comparison to other sculptural media, and can be manipulated with a set of simple tools. It is a tactile medium, which can be formed into three-dimensional shapes quickly and immediately through folding and cutting. This hands-on element is something I feel is important -- it allows the artist to engage immediately with the material, resulting in something physical

and tangible. It is, perhaps, these factors that make it so appealing, not only as a tool to apply in different fields, such as model making for architecture, but as an activity for its own sake. A section of this book is dedicated to a selection of the techniques I use in the creation of my work, and which I demonstrate in my workshops. My aim is to show the basic principles of form-making in paper, which can then be expanded on and explored as the reader wishes. Also included are my sources of inspiration and details of my working practice, which shows the evolution of an initial idea into a final artwork. I hope this book offers an insight into my work,

while offering inspiration to those who wish to explore the creative potential of paper.

THE ART OF DIMENSIONAL, MOVING PAPER DESIGNS

Japan Publications Presents an introduction to the craft of pop-up design, describing the basics of foundation shapes, building techniques, and pull-tab mechanisms and including project templates for a variety of projects.

This Book Is a Planetarium Springer

This synchronic study presents a new onomasiological, frame-theoretical model for the description, classification and theoretical analysis of

the cross-linguistic content category aspectuality. It deals specifically with those pieces of information, which, in their interplay, constitute the aspectual value of states of affairs. The focus is on Romance Languages, although the model can be applied just as well to other languages, in that it is underpinned by a principle grounded in a fundamental cognitive ability: the delimitation principle. Unlike traditional approaches, which generally have a semasiological orientation and strictly adhere to a semantic differentiation between grammatical aspect and lexical aspect (Aktionsart), this study makes no such differentiation and understands these as

merely different formal realisations of one and the same content category: aspectuality. Learning by Doing in Markets, Firms, and Countries Springer "The Architecture pop-up book is a magnificent three-dimensional journey through the history of the art of building construction. Featuring amazing pop-up replications of a comprehensive selection of famous buildings from ancient to modern times"--P. [4]o

Artistry in Bronze Japan Publications

This volume contains the papers presented at IALCCE2018, the Sixth International Symposium on Life-Cycle Civil Engineering (IALCCE2018), held in Ghent, Belgium, October 28-31, 2018. It

consists of a book of extended abstracts and a USB device with full papers including the Fazlur R. Khan lecture, 8 keynote lectures, and 390 technical papers from all over the world. Contributions relate to design, inspection, assessment, maintenance or optimization in the framework of life-cycle analysis of civil engineering structures and infrastructure systems. Life-cycle aspects that are developed and discussed range from structural safety and durability to sustainability, serviceability, robustness and resilience. Applications relate to buildings, bridges and viaducts, highways and runways, tunnels and

underground structures, off-shore and marine structures, dams and hydraulic structures, prefabricated design, infrastructure systems, etc. During the IALCCE2018 conference a particular focus is put on the cross-fertilization between different sub-areas of expertise and the development of an overall vision for life-cycle analysis in civil engineering. The aim of the editors is to provide a valuable source of cutting edge information for anyone interested in life-cycle analysis and assessment in civil engineering, including researchers, practising engineers, consultants, contractors, decision makers and representatives from local authorities.

Wind Energy and Wildlife Impacts
National Academies Press

In this beautifully illustrated and easy step-by-step directions you will learn how to make these marvelous pop-up geometric origamis.

GEOMETRIC KIRIGAMI POP-UPS

Springer-Verlag
This book provides a state-of-art overview of the significant advances in understanding the impacts of wind energy on wildlife. However, many challenges remain regarding planning and policy, assessment of direct and indirect effects on wildlife, methodological approaches, technology development, and mitigation strategies

and their effectiveness. The book comprises a selection of the best contributions presented at the 4th Conference on Wind energy and Wildlife impacts, held in Estoril, Portugal, 2017. The contents promote the international cooperation among researchers, developers, regulators and stakeholders that have contributed to building knowledge on this topic.

The Diabetic Foot

Storey Publishing

The creator of the brilliant *Funny Birds* is back with a 3-D pop-up celebration of artist Victor Vasarely that will delight readers of all ages. Widely accepted as the "father" of op art, Victor Vasarely worked his whole life to create mesmerizing works

that were visually both complex and accessible. Now paper artist Philippe UG has transformed seven of Vasarely's most beautiful works into paper sculptures in his newest pop-up book. As readers turn the pages, Vasarely's creations spring to life in delicate and vibrant three-dimensional structures that trick the eye and excite the imagination. Whether you're a long-time fan of Vasarely or pop-up books in general, this unique book offers a visual experience that readers will turn to again and again.

Balancing Energy Sustainability with Wildlife Conservation

Carol Barton

Journey into the Wizzarding World once more with this stunning new masterpiece from

New York Times best-selling paper engineer Matthew Reinhart. This exhilarating pop-up book invites you to relive the movie adventures of Hermione Granger, Ron Weasley, and the Boy Who Lived—Harry Potter—as you explore London’s magical Diagon Alley like never before. Inside, gorgeously intricate pop-up spreads render fan-favorite Diagon Alley establishments such as Ollivanders, Weasleys’ Wizard Wheezes, and the Leaky Cauldron, plus other locales like the Ministry of Magic and platform nine and three-quarters. Pull tabs allow fans to command the action—rescue a Ukrainian Ironbelly dragon from the depths of Gringotts, or

help Harry navigate out of Knockturn Alley after a Floo powder mishap. Alongside each pop, discover facts and insights from the making of the Harry Potter films. Plus, the book opens into a displayable 3D diorama of all the pop-ups at once. Packed with amazing moments and hidden surprises, *Harry Potter: A Pop-Up Guide to Diagon Alley and Beyond* is a landmark new pop-up book guaranteed to impress Harry Potter fans everywhere.

[Harry Potter: A Pop-Up Guide to Diagon Alley and Beyond](#) CRC Press

This book provides a comprehensive overview of how to use MRI for the imaging of lung disease. Special emphasis is placed on routine applications and the clinical impact

of MRI in each setting. In addition, current technological developments are reviewed and information presented on dedicated applications of MRI in preclinical and translational research, clinical trials, and specialized institutions. During the past two decades, significant advances in the technology have enabled MRI to enter and mature in the clinical arena of chest imaging. Standard protocols are now readily available on MR scanners, and MRI is recommended as the first- or second-line imaging modality for a variety of lung diseases, not limited to cystic fibrosis, pulmonary hypertension, and lung cancer. The benefits

and added value of MRI originate from its ability to both visualize lung structure and provide information on different aspects of lung function, such as perfusion, respiratory motion, ventilation, and gas exchange. On this basis, novel quantitative surrogates for lung function and therapy control (imaging biomarkers) are generated. The second edition of MRI of the Lung has been fully updated to take account of recent advances. It is written by an internationally balanced team of renowned authors representing all major groups in the field.

The Origin of Space

Comprehensive,
practical, evidenced-
based management of
the diabetic foot.

A Gentle Introduction to Numerical Simulations with Python Walter Foster Pub

This text provides a very simple, initial introduction to the complete scientific computing pipeline: models, discretization, algorithms, programming, verification, and visualization. The pedagogical strategy is to use one case study – an ordinary differential equation describing exponential decay processes – to illustrate fundamental concepts in mathematics and computer science. The book is easy to read and only requires a command of one-variable calculus and some very basic knowledge about computer

programming. Contrary to similar texts on numerical methods and programming, this text has a much stronger focus on implementation and teaches testing and software engineering in particular.

A Pop-Up Camera
Springer

This publication represents the culmination of the National Academies Keck Futures Initiative (NAKFI), a program of the National Academy of Sciences, the National Academy of Engineering, and the National Academy of Medicine supported by a 15-year, \$40 million grant from the W. M. Keck Foundation to advance the future of science through interdisciplinary research. From 2003 to 2017, more than 2,000

researchers and other professionals across disciplines and sectors attended an annual "think-tank" style conference to contemplate real-world challenges. Seed grants awarded to conference participants enabled further pursuit of bold, new research and ideas generated at the conference.

Life Cycle Analysis and Assessment in Civil Engineering: Towards an Integrated Vision JP

Medical Ltd

From classic Mexican papel picado to the art of origami, paper has long been a source of inspiration to artists and designers across the globe. Paper Works brings together an eclectic mix of designs and techniques, taking the reader on a visual journey of progression

and transformation. Featuring sculptural carved book arts and installation art to avant-garde paper couture fashion, and examining the work of artists such as Jen Stark and Nikki McClure, this is an essential guide to one of the most fundamental, versatile but often overlooked materials.

500 Paper Objects

Prestel Pub

30th European Symposium on Computer Aided Chemical Engineering, Volume 47 contains the papers presented at the 30th European Symposium of Computer Aided Process Engineering (ESCAPE) event held in Milan, Italy, May 24-27, 2020. It is a valuable resource for chemical engineers, chemical

process engineers, researchers in industry and academia, students, and consultants for chemical industries. Presents findings and discussions from the 30th European Symposium of Computer Aided

Process Engineering (ESCAPE) event Offers a valuable resource for chemical engineers, chemical process engineers, researchers in industry and academia, students, and consultants for chemical industries
