Open System LANs and Their Global

Interconnection Elsevier Lead-Acid Batteries for Future Automobiles provides an overview on the innovations that were recently introduced in automotive lead-acid batteries and other

aspects of current research. Innovative concepts are presented, some of which aim to make lead-acid technology a candidate for higher levels of powertrain hybridization, namely 48-volt mild or high-volt full hybrids. Lead-acid batteries continue to dominate the market as storage devices for automotive starting and power supply systems, but are facing competition from alternative storage technologies and being challenged by new

application requirements, particularly related to new electric vehicle functions and powertrain electrification. Presents an overview of development trends for future automobiles and the demands that they place on the battery Describes how to adapt LABs for use in micro and mild hybrid EVs via collector construction and materials, via carbon additives, via new cell construction (bipolar), and via LAB hybrids with Li-ion and supercap systems System integration of

With the advancing globalization of the world economy, domestic economic regulations are becoming more and more

subject to efforts at international harmonization. This book presents an analysis of this worldwide phenomenon from both a legal and a politico-economic perspective by focusing on (1) the backgrounds and objectives of international harmonization, (2) the negotiating processes involved, and (3) the impact of harmonization on domestic laws and their administration. International harmonization is discussed in a wide range

of cases including trade-related regulations, technical standards and food safety standards, intellectual property rights, labor standards, competition law and policy, financial regulations, and regulations concerning transnational economic crime. Drawing on a wide range of materials and applying a unified analytical framework based on theoretical as well as practical observations, the book surveys this much debated topic in a

comprehensive and accessible way. It thus contributes to a better understanding of both the chances and the challenges of globalization and global governance today.

Intelligent Multimedia

Data Hiding CRC Press
This book lays out all the latest research in the area of multimedia data hiding. The book introduces multimedia signal processing and information hiding techniques. It includes multimedia representation, digital

watermarking fundamentals and requirements of watermarking. It moves on to cover the recent advances in multimedia signal processing, before presenting information hiding techniques including steganography, secret sharing and watermarking. The final part of this book includes practical applications of intelligent multimedia signal processing and data hiding systems.

Implications of Globalization Cambridge Scholars Publishing

This book examines numerous skills of monetization on intellectual property rights for various industries, such as media and communication, display, transgenic technology, smart vehicle, virtual reality, on-line payment, robot and industry 4.0. These analyses are complimented by in-depth cases studies and demonstrations of how companies can profit from an integrated application of all kinds of intellectual property rights through

patent licensing, technology alliance, litigation, merger and acquisition. Asset evaluation and market analysis with strategy planning are elaborated by experts from leading companies. Patent profile analysis to reveal the business strategy, research and product development, and future directions for industry partnerships are demonstrated. This book is essential reading for anyone involved or interested in intellectual property law, and will also

appeal to those in the business world connected with managing intellectual property and confronting competition.

Open System LANs and Their Global Interconnection focuses on the OSI layer 1 to 4 standards (the OSI bearer service) and also introduces TCP/IP and some of the proprietary PC Local Area Network (LAN) standards. The publication first provides

an introduction to Local Area Networks (LANs) and Wide Area Networks (WANs), Open Systems Interconnection (OSI), and LAN standards.

Discussions focus on MAC bridging, token bus, slotted ring, MAC constraints and design considerations, OSI functional standards, OSI model, value of the transport model, benefits and origins of OSI, and significance of the transport. The manuscript then takes a look at Data Link Control Standards and Network Layer

Control. Topics cover relaying, addressing, and routing, use of the ISO 8473 Network Protocol in LANs, Connectionless-mode Network Protocol ISO 8473, connection-mode and connectionless-mode, High Level Data Link Control (HDLC), and data link control in WANs and LANs. The text examines structured building cabling, OSI management, functional standards and proprietary competitors, and transport control standards. Concerns include Connection-mode

Transport Protocol, Network Connection Management Subprotocol (NCMS), OSI functional standards, management information model, LAN management, Simple Network Management Protocol (SNMP), and supporting LAN Standards. The publication is a vital reference for computer science experts and researchers interested in open system Local Area Networks.
