In the new Vintage Kitchen Mystery from the author of No Grater Danger, when the town's resident Scrooge is found dead, Jaymie says Bah humbug! to murder . . . "I have loved this series from

the first book . . . it's like returning to a favorite nook for a cup of tea. It will delight, entice, and drive a reader to want to solve the murder." —Goodreads on No Grater Danger Now that Thanksgiving's behind her, vintage cookware enthusiast Jaymie Leighton Müller is excitedly making plans for the upcoming Dickens Days festival—the town's month-long celebration leading up to Christmas. With a hot cider booth on the village green to warm the hearts and bodies of the townsfolk and a diorama

featuring a scene from A Christmas Carol, things are shaping up for a festive season—until the town's local Scrooge is found murdered, a vintage pudding mould covering his cracked skull. Nearly everyone had a reason to dislike Evan Nezer—either for his bullying ways or his obnoxious arrogance—but with his body being found in Jaymie's diorama, she'll have to figure out who hated him enough to see him dead. With many suspects and even more secrets coming to the surface as she investigates, Jaymie

feels buried by a blizzard of clues. But with Dickens Days on hold until the police can nab the killer, she's determined to catch the culprit so the ghost of Evan Nezer doesn't cast a pall over the whole Christmas season. Includes a vintage recipe! Praise for the Vintage Kitchen Mysteries: "All the right ingredients . . . Small-town setting, kitchen antiques . . . and a bowlful of mystery. A perfect recipe." —New York Times bestselling author Susan Wittig Albert "[A] charming new series." —New York Times bestselling author Sheila Connolly "A chilling whodunit." —Richmond Times-Dispatch "Well-plotted with several unexpected twists and more developed characters." —The Mystery Reader "Jaymie is a great character . . . She is inquisitive and full of surprises!" —Debbie's Book Bag

Have you thought the strange coincidences that happen when someone dies. We have all had times when we knew things that we shouldn't where we experienced feelings that were out of place with the circumstances. There are people in my life who have died and come to visit me in the spiritual form. This is the story of my relationship with those people and the description of their visits.

The term "Peak Oil" was born in January 2001 when Colin Campbell formed the Association for the Study of Peak Oil & Gas (ASPO). Now, Peak Oil is used thousands of times a day by journalists, politicians, industry leaders, economists, scientists and countless others around the globe. Peak Oil is not the end of oil but it tells us the end is in sight. Anyone interested in food production, economic growth, climate change or global security needs to understand this new reality. In *Peeking at Peak Oil* Professor Kjell Aleklett, President of ASPO International and head of the world's leading research group on Peak Oil, describes the decade-long journey of Peak Oil from extremist fringe theory to today's accepted fact: Global oil production is entering terminal decline. He explains everything you need to know about Peak Oil and its world-changing consequences from an insider's perspective. In simple steps, Kjell tells us how oil is formed, discovered and produced. He uses science to reveal the errors and deceit of national and international oil authorities, companies and governments too terrified to admit the truth. He describes his personal involvement in the intrigues of the past decade. What happens when a handful of giant oil fields containing two thirds of our planet's oil become depleted? Will major oil consumers such as the EU and US face rationing within a decade? Will oil producing nations conserve their own oil when they realize that no one can export oil to them in the future? Does Peak Oil mean Peak Economic Growth? If you want to know the real story about energy today and what the future has in store, then you need to be "Peeking at Peak Oil".

The impact of information technology in the field of military decision making is superficially less visible than that of a number of other weapon developments, though its importance has grown steadily since the beginning of the 1980s. Owing to its potential role in modern weapon systems and the prospect of its inclusion as an essential ingredient in many military projects such as the Strategic Defence Initiative, it has become the focus of special interest and efforts. This book is the first attempt to present a broad overview of the prospects for information technology in general, and machine intelligence in particular, in the context of international security. The dangers and promises of weapon and arms control applications of computers and artificial intelligence to decision-making processes are analysed in a technical, strategic, and political perspective by experts from six different countries. In an introductory chapter, Allan Din presents a generic overview of artificial intelligence and its prospects. Thirteen contributors then discuss the conceptual and technical framework of artificial intelligence, analyse implications for weapon systems and strategy, and discuss possible applications to arms control verification and modelling.

This slipcase set includes the Vampire the Masquerade corebook, Camarilla and Anarch supplements. Vampire: The Masquerade is the original and ultimate roleplaying game of personal and political horror. You are a vampire, struggling for survival, supremacy, and your own fading humanity afraid of what you are capable of, and fearful of the inhuman conspiracies that surround you. As a vampire you suffer the pangs of the Hunger, the relentless and terrible thirst for human blood. If you refuse to deal with it, it will overcome your mind and drive you to terrible acts to slake it. You walk this razor's edge every night. Dark designs, bitter enemies, and strange allies await you in this World of Darkness. The classic that changed roleplaying games forever returns! This fifth edition features a streamlined and modern rules design, beautiful new full-color art, and a rich story experience for players. Powered by the innovative Hunger cycle, the game also includes rules for creating system supported character coterie, Loreshets to directly involve players with their favorite parts of the setting and The Memoriam, a new way to bring the character's detailed backgrounds and expand on them in-session.

V5 is a return to Vampire's original vision, moving boldly into the 21st century. While the rules have been redesigned, this new edition honors the deep story of the original, advancing the metaplot from where it left off and detailing exactly what has happened in the world of the Kindred up until tonight. The terror of the Second Inquisition, the conspiracies behind the Gehenna War, and the rekindling of the War of Ages: these are the building blocks of the modern V5 chronicle. V5 has been developed, designed, and written by Kenneth Hite, Mark Rein-Hagen, Matthew Daw

Engineering Digital Design, Second Edition provides the most extensive coverage of any available textbook in digital logic and design. The new REVISED Second Edition published in September of 2002 provides 5 productivity tools free on the accompanying CD ROM. This software is also included on the Instructor's Manual CD ROM and complete instructions accompany each software program. In the REVISED Second Edition modern notation combines with state-of-the-art treatment of the most important subjects in digital design to provide the student with the background needed to enter industry or graduate study at a competitive level. Combinatorial logic design and synchronous and asynchronous sequential machine design methods are given equal weight, and new ideas and design approaches are explored. The productivity tools provided on the accompanying CD are outlined below: [1] EXL-Sim2002 logic simulator: EXL-Sim2002 is a full-featured, interactive, schematic-capture and simulation program that is ideally suited for use with the text at either the entry or advanced-level of logic design. Its many features include drag-and-drop capability, rubber banding, mixed logic and positive logic simulations, macro generation, individual and global (or randomized) delay assignments, connection features that eliminate the need for wire connections, schematic page sizing and zooming, waveform zooming and scrolling, a variety of printout capabilities, and a host of other useful features. [2] BOOZER logic minimizer: BOOZER is a software minimization tool that is recommended for use with the text. It accepts entered variable (EV) or canonical (1's and 0's) data from K-maps or truth tables, with or without don't cares, and returns an optimal or near

optimal single or multi-output solution. It can handle up to 12 functions Boolean functions and as many inputs when used on modern computers. [3] ESPRESSO II logic minimizer: ESPRESSO II is another software minimization tool widely used in schools and industry. It supports advanced heuristic algorithms for minimization of two-level, multi-output Boolean functions but does not accept entered variables. It is also readily available from the University of California, Berkeley, 1986 VLSI Tools Distribution. [4] ADAM design software: ADAM (for Automated Design of Asynchronous Machines) is a very powerful productivity tool that permits the automated design of very complex asynchronous state machines, all free of timing defects. The input files are state tables for the desired state machines. The output files are given in the Berkeley format appropriate for directly programming PLAs. ADAM also allows the designer to design synchronous state machines, timing-defect-free. The options include the lumped path delay (LPD) model or NESTED CELL model for asynchronous FSM designs, and the use of D FLIP-FLOPs for synchronous FSM designs. The background for the use of ADAM is covered in Chapters 11, 14 and 16 of the REVISED 2nd Edition. [5] A-OPS design software: A-OPS (for Asynchronous One-hot Programmable Sequencers) is another very powerful productivity tool that permits the design of asynchronous and synchronous state machines by using a programmable sequencer kernel. This software generates a PLA or PAL output file (in Berkeley format) or the VHDL code for the automated timing-defect-free designs of the following: (a) Any 1-Hot programmable sequencer up to 10 states. (b) The 1-Hot design of multiple asynchronous or synchronous state machines driven by either PLDs or RAM. The input file is that of a state table for the desired state machine. This software can be used to design systems with the capability of instantly switching between several radically different controllers on a time-shared basis. The background for the use of A-OPS is covered in Chapters 13, 14 and 16 of the REVISED 2nd Edition.

Analysis of nonthermal radio emission data obtained by the Planetary Radio Astronomy (PRA) spectrometers on the Voyager 1 and 2 spacecraft was performed. This PRA data provided unique insights into the radio emission characteristics of the outer planets because of PRA's unique spectral response below the terrestrial ionospheric plasma frequency and its unprecedented proximity to the source. Of those results which were documented or published, this final report surveys only the highlights and cites references for more complete discussions. Unpublished results for Uranus, Neptune, and theoretical Ionian current distributions are presented at greater length. The most important conclusion to be drawn from these observations is that banded spectral emission is common to the radio emission below 1-2 MHz observed from all four Jovian planets. In every case multiple spectral features evolve on time scales of seconds to minutes. To the extent these features drift in frequency, they appear never to cross one another. The Neptunian spectral features appear to drift little or not at all, their evolution consisting principally of waxing and waning. Since other evidence strongly suggests that most or all of this radio emission is occurring near the local magnetospheric electron cyclotron frequency, this implies that this emission preferentially occurs at certain continually changing planetary radii. It remains unknown why certain radii might be favored, unless radial electric field components or other means serve to differentiate radially the magnetospheric plasma density, particle energy vectors, or particle coherence. Calculation of the spatial distribution and intensity of the Io-generated magnetospheric currents are also presented; these currents may be limited principally by wave impedance and local field strengths.
