### **CHILD AND ADOLESCENT BEHAVIORAL HEALTH**

Springer  
Pediatricians care for children and families from all walks of life. Some are children known from neighborhoods. Others are children from distant lands. Pediatric focus does not stop with the physical care of children but extends to include their mental and social-emotional health and concern about their families. Pediatricians care about how children are doing at home, at school, and in their communities. In this era, children and their families are impacted by social and political changes in their homes

(social media and screen time), in their communities (refugee populations and children requiring palliative supports at school), in their health care networks (EMR in every tertiary pediatric center), and in the larger world (multiple military deployments of fathers and mothers). This issue explores the impact of contemporary public health challenges for pediatric care, promising models for caring for chronically ill children, and state of the art therapies for complex childhood conditions.

Since publication of the first edition, Dulcan's Textbook of Child and Adolescent Psychiatry has become the recognized standard in child and adolescent psychiatry textbooks. In this thoroughly revised second edition, the editor and chapter authors, leaders in the field of child and adolescent mental health, have again provided a complete, state-of-the-art textbook with notable updates and improvements that enhance accessibility and learning. The new edition is more concise and compact, while

remaining comprehensive in scope. The number of chapters has been reduced to sharpen the book's focus on topics most relevant to clinical work. The textbook reflects the new DSM-5 classifications that all clinicians and trainees must know to function in today's health care environment. Many other features contribute to the textbook's user-friendly design and broad appeal: Chapters on the disorders (neurodevelopmental, psychiatric, and those affecting somatic function) have a consistent structure of definition and clinical description, diagnosis, epidemiology, comorbidity, etiology and risk factors, prevention, course and

prognosis, evaluation, and treatments, making it easy for readers to locate information and facilitating learning. The textbook is useful as both a core textbook for child and adolescent psychiatry fellowship training and a reference for a wide variety of health care professionals, including pediatricians, family physicians, general psychiatrists, child neurologists, psychologists, advanced practice nurses, and psychiatric social workers. The full range of psychosocial treatments is included, focusing on individuals, families, therapeutic milieus, and systemic models of care. The increasing emphasis on taking mental health care beyond the clinician's office is

reflected in chapters on consultations related to schools and to primary care. A section on specialized topics includes chapters on a range of critically important issues, including evidence-based practice, cultural and religious issues, legal and ethical issues, and telehealth. Each chapter in the book ends with "Summary Points," take-away messages that emphasize the most important concepts and promote consolidation of knowledge. The section Additional Resources includes selected books for professionals and web sites for professionals, patients, and families, which provide avenues for further study and connections with

others treating or living with mental health issues. Reflecting both the art and the science of this fascinating field, Dulcan's Textbook of Child and Adolescent Psychiatry, Second Edition, provides authoritative, practical guidance and is a resource that mental health practitioners at all levels of experience should have on their desks and handheld devices.

Michael Yapko's seminal 1992 book, Hypnosis and the Treatment of Depressions, was the first book ever written on the subject of applying hypnosis in the treatment of depressed individuals. Since its publication, Yapko's work has not only withstood the test

of colleagues previously dismissive of the merits of hypnosis as a tool of treatment, but has thrived in the face of it. *Hypnosis and Treating Depression* diversifies the range of topics to consider and increases the number of knowledgeable contributors on the subject of treating depression with hypnosis. The book features chapter contributions by highly experienced and well-known experts on using hypnosis to treat specific forms of depression, with assessment and intervention strategies as well as sample transcripts of the use of hypnosis in therapy sessions. It discusses both broad and targeted applications of hypnosis in

treatment, the treatment of depression with hypnosis in special populations, as well as special considerations regarding hypnotic treatment. As a practical guidebook for clinicians looking to add to their treatment protocols, *Hypnosis and Treating Depression: Applications in Clinical Practice* provides an updated and comprehensive volume on therapeutic uses of hypnosis in the treatment of depression.

In recent years the escalating costs of health care have caused managed care programs to shift the delivery of pediatric psychological services away from specialized medical centers and into primary care and school settings. One result has been a radical expansion of school psychology into issues of clinical intervention, health promotion, and the assessment of psychotropic medications. School psychologists are now

expected to either deliver or (more likely) to provide consultation regarding a wide variety of pediatric psychological services. Because this is a recent phenomenon, very few school-based psychologists or allied health practitioners (school counselors and social workers) have received training in pediatric psychology. The mission of this book is to provide them with a comprehensive and authoritative guide to their newly acquired responsibilities in such areas as psychotherapy, psychopharmacology, health promotion, and prevention of disease. This book is appropriate for anyone concerned with issues of pediatric psychology in school settings:

school psychologists, pediatric psychologists, clinical child psychologists, as well as pediatricians and child psychiatrists.
