The business environment
of the 1990s demands
significant changes in the
way we do business.
Simply formulating
strategy is no longer

sufficient; we must also
design the processes to
implement it effectively.
The key to change is
process innovation, a
revolutionary new
approach that fuses

information technology and human resource management to improve business performance. The cornerstone to process innovation's dramatic results is information technology--a largely untapped resource, but a crucial "enabler" of process innovation. In turn, only a challenge like process innovation affords maximum use of information technology's potential. Davenport provides numerous examples of firms that have succeeded or failed

in combining business change and technology initiatives. He also highlights the roles of new organizational structures and human resource programs in developing process innovation. Process innovation is quickly becoming the byword for industries ready to pull their companies out of modest growth patterns and compete effectively in the world marketplace. **Text and Cases** SAGE Outsourcing has become one of the most important trends used in managing

the enterprise during the last ten years and is now transforming the corporation. At the same time, it is one of the most talked about and hotly debated topics of our times. This book analyses these trends with leading outsourcing practitioners providing a strategic look at how the modern corporation can succeed through outsourcing, the pitfalls and hidden costs of offshoring, what to include in an outsourcing contract, and what outsourcing will look like in the future.

Critical Studies of Corporate Change

Harvard Business Press

The last few decades have seen significant changes in the structure of business organizations, including downsizing, outsourcing and flattened management structures. The effects on employees have been considerable. In this context the importance of the psychological contract between employer and employee has been overlooked, and there is uncertainty about what can be done to bring

about changes to this contract and ultimately the future of organizations. This important book considers the psychological aspects of organizational life, particularly in the context of firms' ethical behaviour and its implications for corporate social responsibility. The authors consider the effects of corporate activity and change on individuals, not just in their working lives, but also in their family and social lives. They address a diverse number of topics from a variety of

theoretical standpoints in an ongoing attempt to redress this neglected field of research.

Business Process Transformation John Wiley & Sons

This book is best suited to those business leaders who have a burning desire to win. It's a book with a

compelling message about the resurgence of business process thinking for competitive advantage. In an easy-to-read format, the book outlines why and how thoughtful CEO's and leadership teams can manage enterprise business processes as the means to transform their good companies into great ones. Spanyi's book is a must read for business leaders searching for ways to manage the business in a more integrated manner by applying 21st century

BPM techniques, thinking and technologies. Business process thinking is the prerequisite for executives to take advantage of powerful new BPM technologies. The book is, however, less about tools, templates and technologies and more about the set of values, beliefs and business practices needed to navigate through challenging economic times. Indeed, that's why Spanyi says BPM is a team sport--Play it to Win! And to win, leaders must manage the cross-

functional teams throughout the organization who must work collaboratively to create enduring value for customers and shareholders. Much of what has been written on BPM is mechanistic and technical. Several of the works are long and tough to digest, and the links to strategy, organization design, people issues and technology are lost in the details. In a fast-paced and engaging manner, Spanyi describes how BPM can provide a robust framework enabling an

organization to achieve strategic focus, organizational alignment and operating discipline. Spanyi proposes that organizations need to consciously work on transforming the mental models of the executive team from the traditional functional paradigm to a customer-driven model that is based on business process thinking. The book provides insight into why change initiatives like reengineering, continuous improvement and Six Sigma, when implemented piecemeal,

are not nearly enough to achieve dominance in today's turbulent business environment. BPM is needed to provide the context for both change initiatives and the application of emerging technology, so that change programs can be deeply and fully integrated across the organization. The book is written such that the initial reading can be done in less than the time it takes to fly from Dallas to Boston or from Toronto to Miami. A quick read can acquaint the reader with

the essential concepts. Readers can then consume the book more carefully a second time, and combine its reading assignments to gain a more complete background and understanding of this vital subject (all the readings can be acquired through the book's Web site).

"This volume, Business Process Reengineering: An ICT Approach, shows how ICT (information and communications technology) can play the role of a driver of business process reengineering (BPR). ICT can aid in enabling improvement in BPR activity cycles as it provides many components that enhance performance that can lead to competitive advantages. IT can interface with BPR to help to improve main business processes in

terms of communication, inventory management, data management, management information systems, customer relationship management (CRM), computer-aided design (CAD), computer-aided manufacturing (CAM), and computer-aided engineering (CAE). This volume explores these issues in depth. BPR is perhaps best described as the restructuring of an organization or enterprise to change the way of business process designs and to implement new workflows and day-to-day

processes. Business process reengineering, at times, is often perceived as similar to business process redesign. In fact, these two differ in the sense that business process reengineering involves taking down the whole structure of the workflow process and starting over from scratch; on the other hand, business process redesign takes a more conservative approach that may leave some of the present structure and may merely tweak certain processes in isolation"--

Businesses must constantly adapt to a dynamically changing environment that requires

choosing an adaptive and dynamic information architecture that has the flexibility to support both changes in the business environment and changes in technology. In general, information systems reengineering has the objective of extracting the contents, data structures, and flow of data and process contained within existing legacy systems in order to reconstitute them
