Written for students
who are just beginning
to study human
services, this practical,
easy-to-read guide
provides a nuts-and-
bolts overview of the

field as well as a glimpse of what students can expect as they continue their education and begin working in their profession. Because the field encompasses many career opportunities, skills, and client populations, this text also helps students decide which specialty is right for them. AN OVERVIEW OF THE HUMAN SERVICES, 2nd Edition, provides a look at human services agencies, jobs, workers, and populations served; a clear analysis of the major theories of causality; and helpful special chapters on such important topics as ethics and stress management. It prepares students by challenging them to become active learners

via self-reflection, case studies, real-world scenarios, applied and experiential activities, and inventories. This edition has been significantly revised and reorganized to improve coverage and flow of the material; for instance, with earlier and more detailed coverage of ethics, more information on two-year human service degrees, an entire chapter on case management, and a new chapter devoted to the issues and interventions related to interpersonal partner abuse, sexual assault (including military sexual assault), HIV/AIDS, and LGBT populations. Important Notice: Media content referenced within the product description or the product text may not be available in the

ebook version. World History, the Human Experience Michael O'Mara Books The second edition of the Impact Evaluation in Practice handbook is a comprehensive and accessible introduction to impact evaluation for policy makers and development practitioners. First published in 2011, it has been used widely across the development and academic communities. The book incorporates real-world examples to present practical guidelines for designing and implementing impact evaluations. Readers will gain an understanding of impact evaluations and the best ways to use them to design evidence-based policies and programs.

The updated version covers the newest techniques for evaluating programs and includes state-of-the-art implementation advice, as well as an expanded set of examples and case studies that draw on recent development challenges. It also includes new material on research ethics and partnerships to conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part Four reviews impact evaluation sampling and data collection. Case studies illustrate different applications

of impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy makers looking to build better evidence around what works in development.

This course by Lester Wertheimer, FAIA, deals with the ideas and examples which have established the

architectural tradition of the Western world. Although there is no written test specifically on this subject, architectural history questions are included in many sections of the exam. The seven lessons review the theories, influences, characteristics, and major monuments from ancient times through the 20th century, including: * Ancient architecture * Greek and Roman architecture * Medieval architecture * Renaissance architecture * Roots of modern architecture * American architecture * 20th century architecture * Checklist of significant 20th century structures The course is attractively illustrated with numerous sketches, plans, and diagrams,

and enhanced by a glossary, bibliography, and an extensive index. A short review quiz follows each lesson, and the course concludes with a major examination. Complete explanations of all quiz and examination answers are included.

This volume contains papers from the technical program of the 7th Extended Semantic Web Conference (ESWC 2010), held from May 30 to June 3, 2010, in

Heraklion, Greece. ESWC 2010 presented the latest results in research and applications of Semantic Web technologies. ESWC 2010 built on the success of the former European Semantic Web Conference series, but sought to extend its focus by engaging with other communities within and outside Information and Communication Technologies, in which semantics can play an important role. At the same time, ESWC has become a truly international conference. Semantics of Web content, enriched with domain theories (ontologies), data about Web usage, natural language processing, etc., will enable a Web that p-

vides a qualitatively new level of functionality. It will weave together a large network of human knowledge and make this knowledge machine-processable. Various automated services, based on reasoning with metadata and ontologies, will help the users to achieve their goals by accessing and processing information in machine-understandable form. This network of knowledge systems will ultimately lead to truly intelligent systems, which will be employed for various complex decision-making tasks. Research about Web semantics can benefit from ideas and cross-fertilization with many other areas: artificial intelligence, natural

language processing, database and information systems, information retrieval, multimedia, distributed systems, social networks, Web engineering, and Web science.
