Chemical and Bio-Process Control, 3rd Edition | InformIT Essentially all bioprocess strategies under consideration for commercial-scale ethanol production consist of the following three steps: (1) pretreatment, (2) enzymatic hydrolysis, and (3) subsequent fermentation to produce ethanol (Lynd 1996, Mielenz 2001, Sun and Cheng 2002, Wyman et al. 2005). Pretreatment of lignocellulosic materials is designed to release sugars and improve the digestibility of cellulose.
