This user-friendly book provides a step-by-step guide to using the five major approaches to research design: quantitative, qualitative, mixed methods, arts-based, and community-based participatory research. Chapters on each approach follow a unique format—they present a template for a research proposal and explain in detail how to conceptualize and fill in every section. Terminology commonly used within each approach is identified, and key moments of ethical decision making are flagged. Interdisciplinary research examples draw on current events and social justice topics. Unique coverage includes hot topics: replication studies and data sharing, tailoring proposals to different audiences, and more. The book also includes a general introduction to social research; an in-depth, practical discussion of ethics; and a chapter on how to begin a research study, from planning a topic to developing a research question via a literature review. Pedagogical Features *Multiple "Review Stops" in each

chapter--quick quizzes with answer keys. *End-of-chapter writing exercises, research activities, and suggested resources. *Bold-face key terms and an end-of-book glossary. *Boxed tips from experts in the respective approaches. *Supplemental PowerPoint slides for instructors using the book in a class. □ □

This book is a significant step towards helping doctoral learners write better proposals and the final dissertation. The book walks the learner through all the sections of my dissertation and describes, paragraph-by-paragraph, how each section may be written succinctly and correctly. Although my original dissertation was a qualitative single case study, students can relate the step-by-step directions in the book to their own qualitative studies regardless of their specific research design. Although all learners pursuing qualitative studies would benefit from the book, those pursuing a case study design, or a descriptive design would benefit the most. If you are planning to use the thematic data analysis in your qualitative doctoral research, you will find this book most helpful. I also recommend that you get the 4-Step Thematic Data Analysis with MAXQDA textbook for the complete, step-by-step walk-through of how to analyze your qualitative data. In this book, Chapters 1 through 3 are aimed at those working on the Prospectus and on the Proposal whereas Chapters 4 and 5 are aimed at those working on the final Dissertation. *From Hypothesis to Results* SAGE Publications Pvt. Research Methods in Education introduces research methods as an integrated set of techniques for investigating questions about the educational world. This lively, innovative text helps students connect technique and substance, appreciate the value of both qualitative and quantitative methodologies, and make ethical research decisions. It weaves actual research "stories" into the presentation of research topics, and it emphasizes validity, authenticity, and practical significance as overarching research goals. The text is divided into three sections: Foundations of Research (five chapters), Research Design and Data Collection (seven chapters), and Analyzing and Reporting Data (three chapters). This tripartite conceptual framework honors traditional quantitative approaches while reflecting the growing popularity of qualitative studies, mixed method designs, and school-based techniques. This approach provides a comprehensive, conceptually unified, and well-written introduction to the exciting but complex field of educational research.
