#1 New York Times bestseller “Essential reading for anyone interested in understanding and treating traumatic stress and the scope of its impact on society.” —Alexander McFarlane, Director of the Centre for Traumatic Stress Studies A pioneering researcher

transforms our understanding of trauma and offers a bold new paradigm for healing in this New York Times bestseller *Trauma is a fact of life*. Veterans and their families deal with the painful aftermath of combat; one in five Americans has been molested; one in four grew up with alcoholics; one in three couples have engaged in physical violence. Dr. Bessel van der Kolk, one of the world's foremost experts on trauma, has spent over three decades working with survivors. In *The Body Keeps the Score*, he uses recent scientific advances to show how trauma literally reshapes both body and brain, compromising sufferers' capacities for pleasure, engagement, self-control, and trust. He explores innovative treatments—from neurofeedback and meditation to sports,

drama, and yoga—that offer new paths to recovery by activating the brain's natural neuroplasticity. Based on Dr. van der Kolk's own research and that of other leading specialists, *The Body Keeps the Score* exposes the tremendous power of our relationships both to hurt and to heal—and offers new hope for reclaiming lives.

MAD SCIENCE AND MODERN CULTURE

W. W. Norton & Company
Weaving together herbal and medical traditions from around the world into a singular cohesive model, this groundbreaking book guides herbal practitioners to a comprehensive understanding of the practice and philosophy of healing with herbs. Sajah

Popham presents an innovative approach to herbalism that considers the holistic relationship among plants, humans, and the underlying archetypal patterns in Nature. Organized in five parts moving from the microcosmic to the universal, this work explores a unique integration of clinical herbalism, Ayurveda, medical astrology, spagyric alchemy, and medical and esoteric traditions from across the world into a truly holistic system of plant medicine. A balance of the heart and the mind, the science and spirit of people and plants, Evolutionary Herbalism provides a holistic context for how plants can be used for transformational levels of healing for the body, spirit, and soul. For both the student herbalist and experienced practitioner, Popham's

original perspectives guide readers to a more intimate, synergistic, and intuitive relationship with the plant kingdom, people, and Nature as a whole.

Otherworlds accompanies a major exhibition of the work of two American artists - Nancy Spero and Kiki Smith - at the Baltic Centre for Contemporary Art, Gateshead, UK, from 13 December 2003 to 30 March 2004. They are both prominent artists, from different generations, whose figurative art addresses issues of the feminine across history and mythology. The book explores thematic connections in their work - the female body, myth and

fantasy, the "decorative" - and situates them in the context of post-War American art and social movements, as well as feminist and cultural theory. Now in her mid-seventies, Nancy Spero is a respected feminist artist whose practice has greatly influenced a younger generation. Her work on paper and her installations are an acknowledgement of the power of the carnivalesque, and an exploration of the potential recoding of space and architecture through a visual poetics of word and image. Never abandoning the figure, even at a time when images of women were thought to carry only negative connotations, Spero has systematically refigured the feminine as collective, social and empowered. Coming from the generation of artists immediately

following Spero, Kiki Smith has always acknowledged a liberating impulse in her art. Both artists have turned vulnerability into strength, making art that represents the female body, but in forms that avoid objectification or narcissism, and that can speak to the universal without idealization or reduction. Both artists make art from the histories, fantasies, legends and myths of the feminine, reclaiming the female body as an expressive vehicle of emancipation and desire. Contributors: Rosetta Brookes, Sylvere Lotringer, Jo Anna Isaak, Marina Warner and Anne Reynolds.

In *Thinking and Destiny*, something new, although older than time, is now made known to the world--about

Consciousness. The information is largely about the makeup of the human, where man comes from, what becomes of him; it explains what thinking is; it tells how a thought is created, and how thoughts are exteriorized into acts, objects and events, and how they make his destiny. Destiny is thus shown to be self-determined by thinking; and the process of re-existence and the after-death states are told in detail. A single

reading of any one chapter of *Thinking and Destiny* brings rich rewards in new understanding of life's puzzling mysteries. To read the entire book is to come nearer to knowledge of one's destiny and how to shape it than is possible through study of anything previously written in the English language. Both the casually curious glancer at books and the most avid seeker for knowledge will be intrigued by the index, which lists more than 400 subjects in *Thinking and Destiny*, and by the fifteen chapter headings in the Table of Contents, which identify the 156 sections. The Foreword contains the only pages in which Mr. Percival uses the first personal pronoun. Here he relates some of the amazing experiences through which he was able to grasp the

knowledge he transmits, and to acquire the ability to do so.

A common definition of ekphrasis is descriptive writing influenced by the visual arts. Beyond the written word, however, responding to art can engender self-reflection, creativity, and help writers to build characters, plot, and setting. This book unites the history and tradition of ekphrasis, its conventions, the writing process, and multi-genre

writing prompts. In addition to subjects such as early art engagement, psychology, and the eye-brain-perception relationship, this book discusses artists' creative processes, tools, and techniques, and offers instruction on how to read art by way of deep-looking.

According to the National Institutes of Health, there are sixty to seventy million people affected by digestive diseases in the United States. The old proverb tells us "you are what you eat," and the latest science shows that this may be truer than we even thought. Diet has a profound effect on both physical and

mental health. Most of the body's immune system is in the gut, so pathology and dysfunction in the gut and imbalanced gut flora can cause neuroinflammation and possibly even neurodegenerative disease over time. Featuring contributions from dozens of experts on gut disorders and related physical, mental, and behavioral health, this book will fascinate you as you read about the intriguing world of bad bugs, cytokine storms, and the environment in your belly that influences your brain. From the microscopic world of Clostridium to the complex communities of biofilm, Bugs, Bowels, and Behavior emphasizes one simple fact: The gut is connected to the brain.

Using coconut, sesame, and other oils to heal chronic conditions, strengthen the immune system, and prevent illness •

Details the process of oil pulling, including when to do it, how long to swish the oil in your mouth, and other oral care techniques that complement it

• Explains the health benefits of 10 different cold-pressed oils, including sesame, coconut, and pumpkin seed, allowing you to choose the best oil for your needs • Includes a step-by-step 7-day detox plan and information on additional detox techniques that enhance the benefits of oil pulling Oil pulling is much more than an oral cleansing method. Originating in the ancient healing systems of Ayurveda and traditional Chinese medicine, where it is

well known that “disease begins in the mouth,” this simple health practice triggers detoxification and healing throughout the entire body. The mouth and tongue are home to bacteria, fungus, and many toxins from the rest of the body. Oil pulling not only cleanses the mouth and tongue, preventing harmful bacteria and toxins from entering the bloodstream, it also triggers enzyme production in the digestive tract, which in turn activates cleansing processes throughout the entire body. Practiced daily, oil pulling leads to better dental and gum health, a stronger immune system, detoxification of major organs including the intestines, lungs, and liver, and healing from many conditions caused by internal toxins and chronic inflammation. In this practical

guide, Birgit Frohn details the simple process of oil pulling, including when to do it, how long to swish the oil in your mouth, and other oral care techniques that complement it, such as tongue scraping. She explains the specific health benefits of 10 different cold-pressed oils that can be used in oil pulling, from traditional sesame oil to vitamin-packed pumpkin seed oil to highly popular coconut oil, allowing you to choose the best oil for your needs. She also reveals the vast number of ailments that can be healed and prevented by regular oil pulling practice, including:

- Acne
- Allergies
- Canker sores
- Arthritis
- Eczema
- Flu and Colds
- Sinus infections and Bronchitis
- Cavities and Gingivitis
- Headaches and Migraines
- Constipation
- And many

more . . . Frohn also explores additional detox techniques that enhance the benefits of oil pulling and concludes with a step-by-step 7-day detox plan for those who want to maximize the effects of oil pulling and accelerate their return to better health.

Wonderful Worlds is an explanation to laymen of events in cosmos and earth history, sequences of species life, and interactions of the brain, mind, soul, genome, enzymes, organs, and body. We see development of cultures directed from positions of logic and reason, eventually describing what makes us human. Proposed as beginning even before the accepted moment of the big bang, the cosmos erupts later over billions of years to first life in a progression of species, eventually leading to a fresh look at Homo erectus and newly thought subspecies of

Neanderthal, sapiens, and modern man. Presented here are at least thirty alternatives to generally accepted myth, magic, and misclassifications in history. Man with emotions, including an underlying spirituality, combined with soul, brain, mind, genome, and body has experienced his evolution for over 600,000 years of a 13.7 billion-year existence. Only in the past ten thousand years has man acted in society as an intelligent, technical, communicating, calculating, emotional, and spiritual resident of Earth, even to expanding in the universe. This comprehensive collection of alternative views should be on the reading shelf of every person inquisitive of his or her planet Earth's birthright.

In this second edition of a widely influential book, the authors discuss the major aspects of nutrition, anatomy and physiology in all of the major groups of vertebrates. The authors have added three new chapters and have updated and expanded all the other chapters. They have also included new drawings and nearly doubled the bibliography. Stevens and Hume discuss relationships

among digestive strategies, diet and environment throughout the text, and consider them together in a chapter on the evolution of the digestive system. The final chapter offers a brief summary of the major concepts and suggests future directions for research.
