### ALGERIA BUSINESS AND INVESTMENT OPPORTUNITIES YEARBOOK VOLUME 1 STRATEGIC, PRACTICAL INFORMATION AND OPPORTUNITIES

SAGE Publications

For introductory computer courses on Microsoft Office 2010 or courses in computer concepts with a lab component for Microsoft Office 2010 applications. Your Office is the Office Applications textbook written for instructors who want more than a 'skill & drill' book that enables students to learn discreet tasks but fails to illustrate the big picture of how these skills work together. Your Office bridges the gap between skill and application, and empowers students to master Office 2010 as a tool to solve problems and make decisions. The cases progress students from learning the skills in each Office Application to using the applications as tools to make business decisions. The unique modular structure provides a strong foundation for students through practice in each workshop and then synthesizes the objectives covered over two workshops, challenging students to really retain what they learned as opposed to learning and then forgetting soon after. The series scenario introduces a large global business (the resort and spa) made up of smaller businesses (golf pro shop, spa, restaurants, event planning, etc) featured in the cases that run throughout all four applications. This approach gives students a solid understanding of how an organization works by exposing them to how individuals in all facets of a business interact with tools like Microsoft Office and use information to make decisions. *Management and Design Strategies in Communication* Microsoft Press

Seminar paper from the year 2011 in the subject Computer Science - Commercial Information Technology, grade: A, University of Kent, course: BSC, language: English, abstract: Information is necessary for many businesses whether small, medium, or large, and the necessity of the information depends on a variety of uses. For example, in the case of proper planning in the business, senior managers will require information to facilitate this planning. However, middle-level management relies on detailed systems of information in order to properly control and monitor various activities in the business. At the same time, various employees who have operational roles also tend to rely on information systems in order to efficiently carry out their duties in the business. Due to all these necessities, many businesses tend to develop information systems that operate at the same time. The Microsoft Company applies Management Information Systems (MIS) in dealing with internal affairs of the company. An Office Automation System (OAS) improves the productivity of employees who need to process data and information (Bill 2006). The Microsoft Company deals with several software systems and the use of OAS becomes handy since it enhances employees' productivity. Employees have the ability to work from their own homes, as well as other areas at their convenience. Apart from these two systems of information, the other systems of information applicable by the Microsoft Company is the use of Decision Support Systems commonly known as DSS. A decision support system enables the management to make decisions in situations surrounded by uncertainty (Bill 2006). A lot of uncertainty occasionally arises from these big companies such as Microsoft and in such times, the use of DSS becomes handy. This method consists of techniques and tools capable of collecting relevant information and providing analysis of all the relevant information gathered. In the process of analysis provisions, the method also provides alternatives used in case of absence of relevant information. Apart from the provisions of alternatives, this method also involves the use of complex spreadsheets and various databases used to develop several "what-if" models.
