Practice Guidelines Oxford University Press

The book is aimed at all those in the long chain between the source of information and its intended target audience and contains information relevant to disseminating information to support effective clinical practice.

Clinical Practice Guidelines Can Work : Dissemination Strategies Must be Tailored to Unique Circumstances of Each Guideline American Psychiatric Pub

The book synthesizes the experiences from Bangladesh, Brazil, France, Ethiopia, Ghana, Indonesia, Japan, Peru, Thailand, Turkey and Vietnam in implementing policies to achieve and sustain Universal Health Coverage. The study focuses on three aspects of UHC reforms: political economy, health financing, and human resources for health.

Advances in Patient Safety National Academies Press

This manual is for busy clinicians and managers. It can help to improve the quality of care by explaining how to apply guidelines in a wide variety of clinical settings. Case studies written by the protagonists themselves describe the experiences of using guidelines in treating a wide range of conditions in primary and secondary care. The final sections collate the lessons learnt from these examples, and propose practical solutions that can be applied in everyday clinical care by doctors, nurses, professionals allied to medicine, and healthcare managers.

World Bank Publications

This book describes the user-focused action evaluation approach for evaluating health programmes policies and changes. It shows that evidence for making decisions can be gathered using a broader range of methods than is usually recognised in healthcare. In asking 'evaluation for whom and for what?' the book defines validity of evidence in relation to usefulness as well as in terms of whether systematic methods were followed. Managers practitioners policy makers researchers and students will find this a practical and readable book. It gives the tools to make sense of an evaluation quickly as well as guidance for carrying one out and ensuring that evaluators gather evidence which can be used for better informed decisions.

How to Put the Evidence Into Practice [Regina] : HSURC

Palliative care provides comprehensive support for severely affected patients with any life-limiting or life-threatening diagnosis. To do this effectively, it requires a disease-specific approach as the patients' needs and clinical context will vary depending on the underlying diagnosis. Experts in the field of palliative care and oncology describe in detail the needs of patients with advanced cancer in comparison to those with non-cancer disease and also identify the requirements of patients with different cancer entities. Basic principles of symptom control are explained, with careful attention to therapy for pain associated with either the cancer or its treatment and to symptom-guided antineoplastic therapy. Complex therapeutic strategies for palliative cancer patients are highlighted that involve both cancer- and symptom-directed options and address a range of therapeutic aims. Issues relating to drug use in palliative cancer care are fully explored, and a separate section is devoted to care in the final phase. A range of organizational and policy issues are also discussed, and the book concludes by considering likely future developments in palliative care for cancer

patients. Palliative Care in Oncology will be of particular interest to palliative care physicians who are interested in broadening the scope of their disease-specific knowledge, as well as to oncologists who wish to learn more about modern palliative care concepts relevant to their day-to-day work with cancer patients.

ELECTRONIC DISSEMINATION OF CANADIAN CLINICAL PRACTICE GUIDELINES TO HEALTH CARE PROFESSIONALS AND THE PUBLIC

National Academies Press

This volume, developed by the Observatory together with OECD, provides an overall conceptual framework for understanding and applying strategies aimed at improving quality of care. Crucially, it summarizes available evidence on different quality strategies and provides recommendations for their implementation. This book is intended to help policy-makers to understand concepts of quality and to support them to evaluate single strategies and combinations of strategies.

Making Use of Guidelines in Clinical Practice John Wiley & Sons

Fifteen to twenty years is how long it takes for the billions of dollars of health-related research to translate into evidence-based policies and programs suitable for public use. Over the past 15 years, an exciting science has emerged that seeks to narrow the gap between the discovery of new knowledge and its application in public health, mental health, and health care settings. Dissemination and implementation (D & I) research seeks to understand how to best apply scientific advances in the real world, by focusing on pushing the evidence-based knowledge base out into routine use. To help propel this crucial field forward, leading D & I scholars and researchers have collaborated to put together this volume to address a number of key issues, including : how to evaluate the evidence base on effective interventions; which strategies will produce the greatest impact; how to design an appropriate study; and how to track a set of essential outcomes. D & I studies must also take into account the barriers to uptake of evidence-based interventions in the communities where people live their lives and the social service agencies, hospitals, and clinics where they receive care. The challenges of moving research to practice and policy are universal, and future progress calls for collaborative partnerships and cross-country research. The fundamental tenet of D & I research--taking what we know about improving health and putting it into practice--must be the highest priority. This book is nothing less than a roadmap that will have broad appeal to researchers and practitioners across many disciplines. [Ed.].

And efficiency in practice.

Models and Frameworks for Implementing Evidence-Based Practice National Academies Press

Shares knowledge and best practice on the development, dissemination and implementation of clinical practice guidelines, drawing on current examples from primary and secondary care including both local and national projects.

Users' Guides to the Medical Literature RCPsych Publications

The Alberta clinical practice guidelines program is supporting appropriate, effective and quality medical care in Alberta through promotion, development and implementation of evidence-based

clinical practice guidelines.

From Woe to Go Radcliffe Publishing

The "essential" companion to the landmark Users' Guides to the Medical Literature - completely revised and updated! 5 STAR DOODY'S REVIEW! "This second edition is even better than the original. Information is easier to find and the additional resources that will be available at www.JMAEvidence.com will provide readers with a one-stop source for evidence-based medicine."-- Doody's Review Service Evidence-based medicine involves the careful interpretation of medical studies and its clinical application. And no resource helps you do it better-and faster-than Users' Guides to the Medical Literature: Essentials of Evidence-Based Clinical Practice. This streamlined reference distills the most clinically-relevant coverage from the parent Users' Guide Manual into one highly-focused, portable resource. Praised for its clear explanations of detailed statistical and mathematical principles, The Essentials concisely covers all the basic concepts of evidence-based medicine--everything you need to deliver optimal patient care. It's a perfect at-a-glance source for busy clinicians and students, helping you distinguish between solid medical evidence and poor medical evidence, tailor evidence-based medicine for each patient, and much more. Now in its second edition, this carry-along quick reference is more clinically relevant--and more essential--than ever! FEATURES Completely revised and updated with all new coverage of the basic issues in evidence-based medicine in patient care Abundant real-world examples drawn from the medical literature are woven throughout, and include important related principles and pitfalls in using clinical research in patient care decisions Edited by over 60 internationally recognized editors and contributors from around the globe Also look for JMAEvidence.com, a new interactive database for the best practice of evidence based medicine.

Guidelines for Guidelines University of Chicago Press

Guidelines for the clinical practice of medicine have been proposed as the solution to the whole range of current health care problems. This new book presents the first balanced and highly practical view of guidelines--their strengths, their limitations, and how they can be used most effectively to benefit health care. The volume offers: Recommendations and a proposed framework for strengthening development and use of guidelines. Numerous examples of guidelines. A ready-to-use instrument for assessing the soundness of guidelines. Six case studies exploring issues involved when practitioners use guidelines on a daily basis. With a real-world outlook, the volume reviews efforts by agencies and organizations to disseminate guidelines and examines how well guidelines are functioning--exploring issues such as patient information, liability, costs, computerization, and the adaptation of national guidelines to local needs.

A Guide to the Development, Implementation and Evaluation of Clinical Practice Guidelines OECD Publishing

The opioid overdose epidemic combined with the need to reduce the burden of acute pain poses a public health challenge. To address how evidence-based clinical practice guidelines for prescribing opioids for acute pain might help meet this challenge, Framing Opioid Prescribing Guidelines for Acute Pain: Developing the Evidence develops a framework to evaluate existing clinical practice guidelines for prescribing opioids for acute pain indications, recommends indications for which new evidence-based guidelines should be developed, and recommends a future research agenda to

inform and enable specialty organizations to develop and disseminate evidence-based clinical practice guidelines for prescribing opioids to treat acute pain indications. The recommendations of this study will assist professional societies, health care organizations, and local, state, and national agencies to develop clinical practice guidelines for opioid prescribing for acute pain. Such a framework could inform the development of opioid prescribing guidelines and ensure systematic and standardized methods for evaluating evidence, translating knowledge, and formulating recommendations for practice.

How to put the evidence into practice: implementation and dissemination strategies: handbook series on preparing clinical practice guidelines: NHMRC Cat No 0014081.

Developing Practice Guidelines for Social Work Intervention National Academies Press

Healthcare decision makers in search of reliable information that compares health interventions increasingly turn to systematic reviews for the best summary of the evidence. Systematic reviews identify, select, assess, and synthesize the findings of similar but separate studies, and can help clarify what is known and not known about the potential benefits and harms of drugs, devices, and other healthcare services. Systematic reviews can be helpful for clinicians who want to integrate research findings into their daily practices, for patients to make well-informed choices about their own care, for professional medical societies and other organizations that develop clinical practice guidelines. Too often systematic reviews are of uncertain or poor quality. There are no universally accepted standards for developing systematic reviews leading to variability in how conflicts of interest and biases are handled, how evidence is appraised, and the overall scientific rigor of the process. In Finding What Works in Health Care the Institute of Medicine (IOM) recommends 21 standards for developing high-quality systematic reviews of comparative effectiveness research. The standards address the entire systematic review process from the initial steps of formulating the topic and building the review team to producing a detailed final report that synthesizes what the evidence shows and where knowledge gaps remain. Finding What Works in Health Care also proposes a framework for improving the quality of the science underpinning systematic reviews. This book will serve as a vital resource for both sponsors and producers of systematic reviews of comparative effectiveness research.

Framing Opioid Prescribing Guidelines for Acute Pain National Academies Press

Advances in medical, biomedical and health services research have reduced the level of uncertainty in clinical practice. Clinical practice guidelines (CPGs) complement this progress by establishing standards of care backed by strong scientific evidence. CPGs are statements that include recommendations intended to optimize patient care. These statements are informed by a systematic review of evidence and an assessment of the benefits and costs of alternative care options. Clinical Practice Guidelines We Can Trust examines the current state of clinical practice guidelines and how they can be improved to enhance healthcare quality and patient outcomes. Clinical practice guidelines now are ubiquitous in our healthcare system. The Guidelines International Network (GIN) database currently lists more than 3,700 guidelines from 39 countries. Developing guidelines presents a number of challenges including lack of transparent methodological practices, difficulty reconciling conflicting guidelines, and conflicts of interest. Clinical Practice Guidelines We Can Trust

explores questions surrounding the quality of CPG development processes and the establishment of standards. It proposes eight standards for developing trustworthy clinical practice guidelines emphasizing transparency; management of conflict of interest ; systematic review-guideline development intersection; establishing evidence foundations for and rating strength of guideline recommendations; articulation of recommendations; external review; and updating. *Clinical Practice Guidelines We Can Trust* shows how clinical practice guidelines can enhance clinician and patient decision-making by translating complex scientific research findings into recommendations for clinical practice that are relevant to the individual patient encounter, instead of implementing a one size fits all approach to patient care. This book contains information directly related to the work of the Agency for Healthcare Research and Quality (AHRQ), as well as various Congressional staff and policymakers. It is a vital resource for medical specialty societies, disease advocacy groups, health professionals, private and international organizations that develop or use clinical practice guidelines, consumers, clinicians, and payers.

The American Psychiatric Association Practice Guidelines for the Psychiatric Evaluation of Adults, Third Edition Columbia University Press

Recommendations for feeding infants and young children have changed substantially over time owing to scientific advances, cultural influences, societal trends, and other factors. At the same time, stronger approaches to reviewing and synthesizing scientific evidence have evolved, such that there are now established protocols for developing evidence-based health recommendations. However, not all authoritative bodies have used such approaches for developing infant feeding guidance, and for many feeding questions there is little or no sound evidence available to guide best practices, despite the fact that research on infant and young child feeding has expanded in recent decades. Summarizing the current landscape of feeding recommendations for infants and young children can reveal the level of consistency of existing guidance, shed light on the types of evidence that underpin each recommendation, and provide insight into the feasibility of harmonizing guidelines. *Feeding Infants and Children from Birth to 24 Months* collects, compares, and summarizes existing recommendations on what and how to feed infants and young children from birth to 24 months of age. This report makes recommendations to stakeholders on strategies for communicating and disseminating feeding recommendations.

GETTING THE MESSAGE ACROSS

National Academies Press

Demanding Medical Excellence is a groundbreaking and accessible work that reveals how the information revolution is changing the way doctors make decisions. Michael Millenson, a three-time Pulitzer Prize nominee as a health-care reporter for the Chicago Tribune, illustrates serious flaws in contemporary medical practice and shows ways to improve care and save tens of thousands of lives. "If you read only one book this year, read *Demanding Medical Excellence*. It's that good, and the revolution it describes is that important."—*Health Affairs* "Millenson has done yeoman's work in amassing and understanding that avalanche of data that lies beneath most of the managed-care headlines. . . . What he finds is both important and well-explained: inconsistency, overlap, and inattention to quality measures in medical treatment cost more and are more dangerous than most

cost-cutting measures. . . . [This book] elevates the healthcare debate to a new level and deserves a wide readership."—*Library Journal* "An involving, human narrative explaining how we got to where we are today and what lies ahead."—Mark Taylor, *Philadelphia Inquirer* "Read this book. It will entertain you, challenge, and strengthen you in your quest for better accountability in health care."—Alex R. Rodriguez, M.D., *American Journal of Medical Quality* "Finally, a health-care book that doesn't wring its hands over the decline of medicine at the hands of money-grubbing corporations. . . . This is a readable account of what Millenson calls a 'quiet revolution' in health care, and his optimism makes for a refreshing change."—*Publishers Weekly* "With meticulous detail, historical accuracy, and an uncommon understanding of the clinical field, Millenson documents our struggle to reach accountability."—Saty Satya-Murti, M.D., *Journal of the American Medical Association*

An Evaluation of a Dissemination Intervention to Enhance Registered Nurses' Use of Clinical Practice Guidelines Related to Tobacco Reduction McGraw Hill Professional

Problem: With an increasing aging Canadian population with chronic diseases such as arthritis, there is an urgent need for health professionals to promote evidence-based arthritis self-management support to their patients. Objective: The overall objective of this thesis was to determine the feasibility of using Facebook as a dissemination strategy for an online evidence-based arthritis self-management program, *People Getting a Grip on Arthritis (PGrip)*, by arthritis health professionals with their patients. Methods: To identify the current evidence and knowledge gaps in regards to the use of innovative dissemination strategies for clinical practice guidelines (CPGs) and social media use for chronic disease self-management among health professionals, two systematic reviews of the literature were conducted. The first systematic review identified research on health professionals' perceived usability and practice behaviour change of information and communication technologies (ICTs) for the dissemination of CPGs. The second identified research on the perceived usability of social media by health professionals to facilitate chronic disease self-management with their patients. To engage potential knowledge users in the research process, an advisory committee consisting of six arthritis health professional users (two registered nurses, two physiotherapists, and two occupational therapists) was convened to identify barriers and facilitators of using and accessing Facebook as a dissemination strategy for PGrip. The advisory committee was also convened to identify how the PGrip Facebook group page could be tailored to improve usability among arthritis health professionals. A feasibility study of 78 arthritis health professionals was then conducted to determine the feasibility of using Facebook as a dissemination strategy for PGrip among arthritis health professionals to their patients. To guide future research, a protocol for a pilot randomized controlled trial (RCT) was developed that will compare Facebook with an educational website and email to determine which strategy will demonstrate greater perceived usefulness

among arthritis health professionals to disseminate the PGrip program with their patients. Results: The findings of the first systematic review revealed that health professionals' perceived usability and practice behaviour change varies by type of ICT and the heterogeneity and paucity of properly conducted studies did not allow for a clear comparison between studies. The second systematic review revealed that health professionals perceived discussion forums and collaborative projects to be useful social media platforms to facilitate chronic disease self-management with patients. The feasibility study suggested that a Facebook group page can be used as a dissemination strategy for the PGrip program by arthritis health professionals. The Facebook group page was perceived to be

usable with patients after two weeks and three months in regards its ease of use and high output quality. Conclusion: The overall research of this thesis provides advanced knowledge on how a Facebook group page as a dissemination strategy for an evidence-based self-management program for patients is perceived by arthritis health professionals. Facebook may provide arthritis health professionals with an additional option of how to best share evidence-based information to allow their patients to successfully self-manage their arthritis. A future pilot RCT is needed to determine whether Facebook is superior to other ICT intervention in regards its perceived usefulness among arthritis health professionals to disseminate the PGrip program with their patients.
