This reference work delivers an interdisciplinary, applied spatial and geographical approach to the study of languages and linguistics. This work includes chapters and sections related to language origins, diffusion, conflicts, policies, education/instruction, representation, technology, regions, and mapping. Also addressed is the mapping of languages and linguistic diversity, on language in the context of politics, on the relevance of language to cultural identity, on language minorities and

endangered languages, and also on language and the arts and non-human language and communication. This reference work looks at the subject matter and contributors to the disciplines and programs in the social sciences and humanities, and the dearth of materials on languages and linguistics. The topics covered are not only discipline-centered, but in the cutting-edge fields that intersect several disciplines and also cut across the social sciences and humanities. These include gender studies, sustainability and development, technology and social media impacts, law and human rights, climate change, public health and epidemiology,

architecture, religion, visual representation and mapping. These new and emerging research directions and other intersecting fields are not traditionally discipline-bounded, but cut across numerous fields. The volumes will appeal to those within existing fields and disciplines and those working the intersections at local, regional and global scales.

Few wine books can be called classic, but the first edition of The World Atlas of Wine made publishing history when it appeared in 1971. It is recognized by critics as the essential and most authoritative wine

reference work available. This eighth edition will bring readers, both old and new, up to date with the world of wine. To reflect all the changes in the global wine scene over the past six years, the Atlas has grown in size to 416 pages and 22 new maps have been added to the wealth of superb cartography in the book. The text has been given a complete overhaul to address the topics of most vital interest to today's wine-growers and drinkers. With beautiful photography throughout, Hugh Johnson and Jancis Robinson, the world's most respected wine-writing duo, have once again joined forces to create a classic that no wine lover can afford to be without. "The World

Atlas of Wine is the single most important reference book on the shelf of any wine student." - Eric Asimov, New York Times "The most useful single volume on wine ever published... If I owned only one wine book, it would be this one." - Andrew Jefford, Decanter "Like a good bottle of wine, you'll find yourself going back to it again and again... Perfect for anyone who has a thirst for greater wine knowledge." - Edward Deitch, NBC/today.com "The World Atlas of Wine belongs on your shelf... The essential rootstock of any true wine lover's library. A multi-layered snapshot of wine and how it has evolved." - Dave McIntyre, Washington Post
Handbook of the

Changing World Language Map Penguin Languages are not only tools of communication, they also reflect a view of the world. Languages are vehicles of value systems and cultural expressions and are an essential component of the living heritage of humanity. Yet, many of them are in danger of disappearing. UNESCO's Atlas of the World's Languages in Danger tries to raise awareness on language endangerment. This third edition has been completely revised and expanded to include new series of maps and new points of view.

The Visual World Atlas - Facts and maps of the current world

Routledge
What do people think of translation in the different historical, cultural and linguistic traditions of the world? How many uses has translation been put to? How distant from one another are the concepts of translation

found in the different traditions? These are some of the questions A World Atlas of Translation addresses. Its twenty-one reports give us pictures taken from the inside, both from traditions that are well represented in the literature and from the many that (for now) are not. But the Atlas is not content with documenting – no map is this innocent. In fact, the wealth of information collected and made accessible by its reporters can be useful to gauge the dispersion of translation concepts across traditions. As you read its reports, the Atlas will keep asking “How far apart do these concepts look to you?” Finally and more ambitiously, the reports can help us test the hypothesis

that a cross-cultural notion of translation exists. In this respect, the Atlas is mostly a proof of concept. It hopes to encourage further fact-based research in quest of a robust and compelling unifying notion of translation.

This is the first English-language atlas to systematically introduce the environment, hazard, vulnerability and risk mapping for 11 natural disasters, i.e. earthquake, volcano, landslide, flood, storm surge, sand-dust storm, tropical cyclone, heat wave, cold wave, drought and wildfire, and risk mapping for multi-hazard disaster in the world. The above 11 hazards are assessed and mapped at grid unit, comparable-geographic unit and national unit, and the multi-hazard is assessed and mapped

at grid unit and national unit. The expected annual mortality and/or affected population risks and expected annual economic loss and/or affected property risk of 11 hazards and multi-hazard of the world at national level are unprecedentedly derived and ranked. The atlas can be a good reference for researchers and students in the field of natural disaster risk management and risk governance, and enterpriser and risk manager as well to understand the global natural disaster risk. **AMAZING WORLD
ATLAS**

Barefoot Books
Published with ISME, ITTO and project partners FAO, UNESCO-MAB, UNEP-WCMC and UNU-INWEH This atlas provides the first truly global assessment of the state of the world's mangroves. Written by

a leading expert on mangroves with support from the top international researchers and conservation organizations, this full colour atlas contains 60 full-page maps, hundreds of photographs and illustrations and a comprehensive country-by-country assessment of mangroves. Mangroves are considered both ecologically and from a human perspective. Initial chapters provide a global view, with information on distribution, biogeography, productivity and wider ecology, as well as on human uses, economic values, threats, and approaches for mangrove management. These themes are revisited

throughout the regional chapters, where the maps provide a spatial context or starting point for further exploration. The book also presents a wealth of statistics on biodiversity, habitat area, loss and economic value which provide a unique record of mangroves against which future threats and changes can be evaluated. Case-studies, written by regional experts provide insights into regional mangrove issues, including primary and potential productivity, biodiversity, and information on present and traditional uses and values and sustainable management.

John Benjamins

This is the first book on coordinating constructions that adopts a broad cross-linguistic perspective. Coordination has been studied intensively in English and other major European languages, but we are only beginning to understand the range of variation that is found world-wide. This volume consists of a number of general studies, as well as fourteen case studies of coordinating constructions in languages or groups of languages: Africa (Iraqw, Fongbe, Hausa), the Caucasus (Daghestanian, Tsakhur, Chechen), the Middle East (Persian

and other Western Iranian languages), Southeast Asia (Lai, Karen, Indonesian), the Pacific (Lavukaleve, Oceanic, Nêlêmwa), and the Americas (Upper Kuskokwim Athabaskan). A detailed introductory chapter summarizes the main results of the volume and situates them in the context of other relevant current research.

An African proverb states that when a knowledgeable old person dies, a whole library disappears. In that light, this book presents knowledge that is new or has not been readily available until now because it has not previously been captured or reported by indigenous people. Indigenous knowledge that embraces ornithology takes in whole social dimensions that are inter-linked with environmental ethos, conservation and management for sustainability. In contrast, western approaches have tended to reduce knowledge to elemental and material references. This book also looks at the

significance of ind.
