CARR PAGE

Case Studies/Lgl and Ethical Nrsgr-Iml Clinical Decision Making Case Studies in Maternity and Women's Health Created especially for nurses, the Clinical Decision Making series helps to bridge the gap between content knowledge and clinical application. Case

Studies in Maternity & Women's Health is the first installment in this innovative series, which provides over forty maternity and women's health case histories, questions, and responses based on real life client situations. Every case contains an introductory "blueprint" of variables that must be considered while evaluating a particular scenario, which are pertinent concerning the client, nursing protocol, and setting of

care. Examples of these variables include age, gender, or culture of the client, the client with a pre-existing condition, legal issues, or communication skills. Each blueprint and case is different, just as each clinical situation is unique to others. By allowing learners to simulate the actual decision-making process, they can gain a comfort level to make informed clinical judgments that will help them become successful nurses. Quite simply, Clinical Decision Making shortens the distance between the classroom and nursing practice like no other educational tool.

DECISION-MAKING, PRINCIPLES, AND CASES

Lippincott Williams & Wilkins

Includes answers to the cases in the core

book.

Clinical Decision Making: Case Studies in Medical-Surgical Nursing Oxford University Press, USA

Over the past decade health care systems around the world have placed increasing importance on the relationship between patient choice and clinical decision-making. In the years since the publication of the second edition of Shared Decision Making in Health Care, there have been significant new developments in the field, most notably in the US where 'Obamacare' puts shared decision making (SDM) at the centre of the 2009 Affordable Care Act. This new edition explores shared decision making by examining, from practical and theoretical perspectives, what should comprise an effective

decision-making process. It also looks at the benefits and potential difficulties that arise when patients and clinicians share health care decisions. Written by leading experts from around the world and utilizing high quality evidence, the book provides an up-to-date reference with real-world context to the topics discussed, and in-depth coverage of the practicalities of implementing and teaching SDM. The breadth of information in Shared Decision Making in Health Care makes it an essential resource for policy-makers and health care workers. As health care systems adapt to increasingly collaborative patient-clinician care frameworks, this will also prove a useful guide to SDM for clinicians of all disciplines.

Clinical Decision Making Springer

Publishing Company

Includes: Case Studies, Questions, Suggested Answers, and References.

PRINCIPLES AND PRACTICE OF CASE-BASED CLINICAL REASONING EDUCATION

Delmar Pub

This book takes a behavioural approach to examine six important housing questions: tenure decision, gentrification, place attachment, housing bubbles, housing wealth, and residential satisfaction. Using experimental and field data, the book demonstrates the effects of six behavioural biases and heuristics (i.e., anchoring and reference dependence, loss aversion, mental accounting, endowment effect, herd behaviours, and social comparison) on

these housing decisions. The first part of the book introduces the questions and provides a behavioural science toolbox before the second part adopts a real-world case study approach. Real data sets and suggested answers are provided, and the cases come from the UK, USA, and China. Background information is given in each case to facilitate the understanding of the case data and question, as well as the discussions on the results. This book is ideal supplementary reading on a variety of courses such as housing studies, economics, real estate, research methods, and for students and academics who are interested in the application of behavioural science in housing decisions.

Shared Decision Making in Health Care

John Wiley & Sons

Describes a wide-ranging and representative selection of clinical scenarios, making use of icons, questions/answers and tips.

Clinical Decision Making Routledge

This book is open access under a CC BY 4.0 license. This volume describes and explains the educational method of Case-Based Clinical Reasoning (CBCR) used successfully in medical schools to prepare students to think like doctors before they enter the clinical arena and become engaged in patient care. Although this approach poses the paradoxical problem of a lack of clinical experience that is so essential for building proficiency in clinical reasoning, CBCR is built on the premise that solving clinical problems involves the ability to

reason about disease processes. This requires knowledge of anatomy and the working and pathology of organ systems, as well as the ability to regard patient problems as patterns and compare them with instances of illness scripts of patients the clinician has seen in the past and stored in memory. CBCR stimulates the development of early, rudimentary illness scripts through elaboration and systematic discussion of the courses of action from the initial presentation of the patient to the final steps of clinical management. The book combines general backgrounds of clinical reasoning education and assessment with a detailed elaboration of the CBCR method for application in any medical curriculum, either as a mandatory or as an elective course. It

consists of three parts: a general introduction to clinical reasoning education, application of the CBCR method, and cases that can be used by educators to try out this method.

CASE STUDIES IN MINIMAL ACCESS SURGERY

F A Davis Company

This phenomenal new text focuses on assisting students in learning that there can be many possible choices in the clinical decision making process, and that these different choices can lead to many equally successful outcomes. *Case Studies Through the Health Care Continuum: A Workbook for the Occupational Therapy Student* is an entire book of case studies of adults with physical and psychological deficits. Each

case study is followed by questions, organized around performance areas and performance components, treatment planning and discharge planning areas. The questions are designed to encourage clinical thinking about the cases. The cases encompass a variety of diagnoses and take place in a variety of health care arenas. By using case studies, students will begin to, and advance, their thinking process before directly dealing with clients. The cases are comprehensive and well thought out, and the questions provide a good starting point for processing and guiding critical thinking. This exceptional text can be used in almost every course in the curriculum!

A WORKBOOK FOR THE OCCUPATIONAL THERAPY STUDENT

Routledge

This essential text presents and explains every aspect of clinical decision making, providing a sound base of knowledge for confidence and accuracy. Its format incorporates principles of problem-based learning methods that are used in many nursing programs. The revised Second Edition contains 20 new case studies of the most common diseases and disorders encountered in family practice; each includes a review of all the information necessary for developing a plan of care and emphasizes differential diagnosis and clinical reasoning for the nurse practitioner. The text's problem-oriented format promotes and

strengthens critical thinking skills. Additional features include: tutorials; holistic health considerations; case accuracy; laboratory tests that require learners to interpret tests and their impact on a patient's condition; interdisciplinary collaboration; decision trees that are applicable to each case; research-based outcomes; complementary therapies; and much more. A Brandon-Hill Recommended Title.

A Case Study Approach Oxford University Press

Quite simply, Clinical Decision Making shortens the distance between theory and nursing practice like no other educational tool."--BOOK JACKET.

Nursing Health Assessment Cengage Learning

This guide delivers problem-based scenarios in neuropalliative care; improving quality of life for patients with neurologic diseases.

Clinical Decision Making Jones & Bartlett Learning

Quick and easy-to-read case studies that improve surgical decision-making. Multiple scenarios in general and laparoscopic surgery explore various operative strategies and the rationale for selecting a given approach. Techniques are briefly described and illustrated and are accompanied by a short evidence-based review of the literature. the SAGES Manual of Strategic Decision Making: Case Studies in Minimal Access Surgery is an excellent resource and clinical decision-making tool for general surgeons and residents. While other

SAGES manuals simply discuss core topics in minimally-invasive surgery. *Multi-Criteria Decision Analysis* Springer Cross- Cultural Perspectives in Medical Ethics, Second Edition, is an anthology of the latest and best readings on the medical ethics of as many of the major religious, philosophical, and medical traditions that are available today.

CASE STUDIES IN NEUROPALIATIVE CARE

Lippincott Williams & Wilkins

Delmar Pub

CLINICAL DECISION MAKING

Delmar Pub
The most comprehensive and up-to-date

collection of its kind, *Case Studies in Biomedical Ethics: Decision-Making, Principles, and Cases*, Second Edition, explores fundamental ethical questions arising from real situations faced by health professionals, patients, and others. Featuring a wide range of more than 100 case studies drawn from current events, court cases, and physicians' experiences, the book is divided into three parts. Part 1 presents a basic framework for ethical decision-making in healthcare, while Part 2 explains the relevant ethical principles: beneficence and nonmaleficence, justice, respect for autonomy, veracity, fidelity, and avoidance of killing. Parts 1 and 2 provide students with the background to analyze the ethical dilemmas presented in Part 3, which

features cases on a broad spectrum of issues including abortion, mental health, experimentation on humans, the right to refuse treatment, and much more. The volume is enhanced by opening text boxes in each chapter that cross-reference relevant cases in other chapters, an appendix of important ethical codes, and a glossary of key terms.

Case Studies Medical-Surg Nrsng-Iml
Delmar Pub

Established as a staple reference in the EMG laboratory, *Clinical Electromyography: Nerve Conduction Studies* is now in its revised, updated Third Edition. Dr. Oh, a world-renowned authority, provides encyclopedic coverage of current nerve conduction techniques and their clinical uses. This

edition's new chapter on special nerve conduction techniques describes studies such as motor unit number estimation and muscle fiber conduction velocity and discusses their clinical value and limitations. Coverage also includes new nerve conduction techniques and recent developments in electromyographic diagnosis of immunologically-mediated neuropathies, segmental demyelination, mild carpal tunnel syndrome, and neurogenic thoracic outlet syndrome. More than 500 illustrations complement the text.

Cross-cultural Perspectives in Medical Ethics CRC Press

Minimize risk for every surgery-bound patient with this concise, high-yield clinical reference. With new surgical advances and innovations, more older,

sicker, higher-risk patients are undergoing surgery. Expertly assessing and managing patients with comorbidities who are undergoing surgical procedures is an absolutely critical task today—and Decision Making in Perioperative Medicine: Clinical Pearls will ensure that you make the right decisions through every step of the process. Which risk calculator should you use? How long should you delay surgery after percutaneous coronary intervention? Should the patient continue taking aspirin? How long before surgery should you stop a direct-acting oral anticoagulant? Decision Making in Perioperative Medicine: Clinical Pearls answers your questions when it comes to perioperative care. Filled with algorithms, tables, and clinical pearls,

this practical resource is organized into three sections: Key takeaways on preoperative evaluation, testing, anesthesia, and medication management Expert guidance on evaluating the effect of comorbidities on surgical outcome and providing strategies for medical optimization to minimize risk Review of common postoperative medical complications and treatment Whether you're a hospitalist, internist, family physician, anesthesiologist, physician assistant, or nurse practitioner, Decision Making in Perioperative Medicine: Clinical Pearls provides the evidence-based information and insights you need to make sure every surgery-bound patient receives the quality of care and management they deserve.

A Critical Thinking, Case Studies Approach Jones & Bartlett Publishers
Decision analysis has become widely recognized as an important process for translating science into management actions. With climate change and other systemic threats as driving forces in creating environmental and engineering problems, there is a great need for understanding decision making frameworks through a case-study based approach. Management of environmental and engineering projects is often complicated and multidisciplinary in scope and nature, thus issues that arise can be difficult to solve analytically. *Multi-Criteria Decision Analysis: Case Studies in Engineering and the Environment* provides detailed description of MCDA methods and tools

and illustrates their applications through case studies focused on sustainability and system engineering applications. *New in the Second Edition: Addresses current and emerging environmental and engineering problems* Includes seven new case studies to illustrate different management situations applicable at the international level Builds on real case studies from recent and relevant environmental and engineering management experience Describes advanced MCDA techniques and extensions used by practitioners Provides corresponding decision models implemented using the DECERNS software package Gives a more holistic approach to teaching MCDA methodology with a focus on sustainable solutions and adoption of new

technologies, including nanotechnology and synthetic biology. Given the novelty and inherent applicability of this decision-making framework to the environmental and engineering fields, a greater number of teaching tools for this topic need to be made available. This book provides those teaching tools, covering the breadth of the applications of MCDA methodologies with clear explanations of the MCDA process. The case studies are implemented in the DECERNS software package, allowing readers to experiment and explore and to understand the full process by which environmental managers assess these problems. This book is a great resource for professionals and students seeking to learn decision analysis techniques and apply similar frameworks to

environmental and engineering projects.

[Acp Kip Clinical Decision Making Case Studies in Maternity/p](#) John Wiley & Sons

Reflecting the latest practices in the field, *Clinical Decision Making: Case Studies in Medical-Surgical Nursing*, 2nd edition bridges the gap between classroom knowledge and clinical application. Emphasizing holistic nursing care, this resource helps nursing students sharpen their critical thinking skills and gain experience applying what they have learned. The more than 40 medical-surgical case histories and related questions, and responses are based on real-life client situations. Every case contains an introductory blueprint of variables that must be considered while evaluating a particular scenario concerning the client, nursing protocol,

and setting of care. Each blueprint and case is different, just as each clinical situation is unique. As learners simulate the actual decision-making process, they gain valuable experience making informed clinical judgments that will help them become successful nurses.

Categorized by complexity, the book appeals to a broad range of learning levels and styles. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Case Studies/Critical Care Nrsng-1ml

Delmar Pub

CLINICAL DECISION MAKING: CASE STUDIES FOR THE OCCUPATIONAL THERAPY ASSISTANT is a first of its kind text designed to help students, entry-

level practitioners and professors work on fostering clinical reasoning skills in the provision of occupational therapy assistant services. The case studies in this book incorporate the most common practice settings across the continuum of care and follow clients as they progress across this continuum. Organized broadly around the current Occupational Therapy Practice Framework of the American Occupational Therapy Association, each case contains examples of how this framework can be applied to a particular client. The case studies in this book are meant to provoke discussion among your students about treatment planning, ethical issues and collaboration with the client, family and other healthcare providers.
