Preventing humanitarian atrocities is becoming as important for the United Nations as dealing with inter-state war. In this book, Ramesh Thakur examines the transformation in UN operations, analysing its changing role and structure. He asks why, when and how force may be used and argues that the growing gulf between legality and legitimacy is evidence of an eroded sense of international community. He considers the tension between the US, with its capacity to use force and project power, and the UN, as the centre of the international law enforcement system. He asserts the central importance of the rule of law and of a rules-based order focused on the UN as the foundation of a civilised system of international relations. This book will be of interest to students of the UN and international organisations in politics, law and international relations departments, as well as policymakers in the UN and other NGOs.

Physician-Assisted Death is the eleventh volume of Biomedical Ethics Reviews. We, the editors, are pleased with the response to the series over the years and, as a result, are happy to continue into a second decade with the same general purpose and zeal. As in the past, contributors to projected volumes have been asked to summarize the nature of the literature, the prevailing attitudes and arguments, and then to advance the discussion in some way by staking out and arguing forcefully for some basic position on the topic targeted for discussion. For the present volume on Physician-Assisted Death, we felt it wise to enlist the services of a guest editor, Dr. Gregg A. Kasting, a practicing physician with extensive clinical knowledge of the various problems and issues encountered in discussing physician assisted death. Dr. Kasting is also our student and just completing a graduate degree in philosophy with a specialty in biomedical ethics here at Georgia State University. Apart from a keen interest in the topic, Dr. Kasting has published good work in the area and has, in our opinion, done an excellent job in taking on the lion's share of editing this well-balanced and probing set of essays. We hope you will agree that this volume significantly advances the level of discussion on physician-assisted euthanasia.

Incidentally, we wish to note that the essays in this volume were all finished and committed to press by January 1993.

This book offers a resource to aid in implementing psychosocial screening, assessment, and consequently integrating prevention, care and treatment (i.e. pharmacological, psychosocial rehabilitation and psychotherapeutic) in medicine. It is becoming increasingly recognized that one method of combating spiraling health care costs in developed nations is to integrate psychiatric care into medicine including primary care settings. This volume reviews the main issues relative to the paradigm of a person-centered and recovery-oriented approach that should imbue all medical areas and specialties. It proposes integration methods in screening and assessment, clinimetric approach, dignity conserving care, cross-cultural and ethical aspects, treatment and training as a basic and mandatory need of a whole psychosomatic approach bridging the several specialties in medicine. As such, the book addresses a topic that all physicians, including primary care and psychiatric professionals in a wide variety of mental health settings are currently discussing, planning and preoccupied with, namely the task of integrating mental health into all the medical fields, including primary care, cardiology, psychiatry, oncology and so on.

This publication assesses progress towards Sustainable Development Goal 4 (SDG 4) on education and its ten targets, as well as other related education targets in the SDG agenda. It addresses inclusion in education, drawing attention to all those excluded from education, because of background or ability. The report is motivated by the explicit reference to inclusion in the 2015 Incheon Declaration, and the call to ensure an inclusive and equitable quality education in the formulation of SDG 4, the global goal for education. It reminds us that, no matter what argument may be built to the contrary, we have a moral imperative to ensure every child has a right to an appropriate education of high quality.

GLOBAL EDUCATION MONITORING REPORT 2020

Cambridge University Press

The sixth edition of an educational handbook revised and updated in 1992 that has become a standard text for training teachers in the health sciences. Unorthodox in its approach, the book challenges teachers to increase their skills so as to make learning easier for students. To this end, readers are given a task-oriented exercise in self-learning that can help them rethink attitudes, reorient teaching objectives, and then master the appropriate skills. The importance of producing graduates who are able to respond to community and individual health needs is repeatedly emphasized. The book features five main chapters covering educational objectives, evaluation planning, program construction, test and measurement techniques, and the organization of an educational workshop. Within each chapter, theoretical information is presented and followed wherever appropriate by exercise sheets. Such a format makes it possible for the reader to skip and select, test, and choose according to his individual interests. Though most practical examples pertain to the medical and nursing professions, the handbook has also enjoyed wide use in teacher training for the dentistry, pharmacy, and sanitary engineering professions.
