 The first volume of the Advances in Robotics and Automatic Control: Reviews, Book Series started by IFSA Publishing in 2018 contains ten chapters written by 32 contributors from 9 countries: Belgium, China, Germany, India, Ireland, Japan, Serbia, Tunisia and USA. We hope that readers will enjoy this book and it can be a valuable tool for those who involved in research and development of various robots and automatic control systems.
 41st AIAA Aerospace Sciences Meeting & Exhibit Springer Nature
 The outstanding story of four thousand American war heroes: the German shepherds and Labrador retrievers who saved countless lives in the Vietnam War. A combat veteran and scout dog handler explores the remarkable bond between valorous soldiers and their extraordinary canine teammates.
 Divided Spirits Logos Verlag Berlin GmbH
 Vehicle accelerations affect the human body in various ways. In some cases, accelerations cause involuntary motions of limbs like

arms and hands. If someone is engaged in a manual control task at the same time, these involuntary limb motions can lead to involuntary control forces and control inputs. This phenomenon is called biodynamic feedthrough (BDFT). The control of many different vehicles is known to be vulnerable to BDFT effects, such as that of helicopters, aircraft, electric wheelchairs and hydraulic excavators. The fact that BDFT reduces comfort, control performance and safety in a wide variety of vehicles and under many different circumstances has motivated numerous efforts into measuring, modeling and mitigating these effects. It is known that BDFT dynamics depend on vehicle dynamics and control device dynamics, but also on factors such as seating dynamics, disturbance direction, disturbance frequency and the presence of seat belts and arm rests. The most complex and influential factor in BDFT is the human body. It is through the human body dynamics that the vehicle accelerations are transferred into involuntary limb motions and, consequently, into involuntary control inputs. Human body dynamics vary between persons with different body sizes and weights, but also within one person over time. The goal of the research was to increase the understanding of BDFT to allow for effective and efficient

mitigation of the BDFT problem. The work dealt with several aspects of biodynamic feedthrough, but focused on the influence of the variable neuromuscular dynamics on BDFT dynamics. The approach of the research consisted of three parts: first, a method was developed to accurately measure BDFT. Then, several BDFT models were developed that describe the BDFT phenomenon based on various different principles. Finally, using the insights from the previous steps, a novel approach to BDFT mitigation was proposed and experimentally validated.

Divided Spirits tells the stories of tequila and mezcal, two of Mexico's most iconic products. In doing so, the book illustrates how neoliberalism influences the production, branding, and regulation of local foods and drinks. It also challenges the strategy of relying on "alternative" markets to protect food cultures and rural livelihoods. In recent years, as consumers increasingly demand to connect with the people and places that produce their food, the concept of terroir—the taste of place—has become more and more prominent. Tequila and mezcal are both protected by denominations of origin (DOs), legal designations that aim to guarantee a product's authenticity based on its link to terroir. Advocates argue that the DOs expand market opportunities, protect cultural heritage, and ensure the reputation of Mexico's national spirits. Yet this book shows how the institutions that are supposed to guard "the legacy of all Mexicans" often fail those who are most in need of protection: the small producers, agave farmers, and other workers who have been making tequila and mezcal for generations. The consequences—for the quality and taste of tequila and mezcal, and for communities throughout Mexico—are stark. *Divided Spirits* suggests that we must move beyond market-based models if we want to safeguard local products and the people who make them. Instead, we need systems of production, consumption, and oversight that are more democratic, more inclusive, and more participatory. Lasting change is unlikely without the involvement of the state and a sustained commitment to addressing inequality and supporting rural development.

Elementi di geometria solida Univ of California Press

Vietnam - A Dog's War is about a group of men who were trained to walk patrol point with a German Shepherd dog. This book is about the dogs and some of the incredible things they did to save lives.

NAEP Newsletter IGI Global

These proceedings collect the latest research results in mechanism and machine science, intended to reinforce and improve the role of mechanical systems in a variety of applications in daily life and industry. Gathering more than 120 academic papers, it addresses topics including: Computational kinematics, Machine elements, Actuators, Gearing and transmissions, Linkages and cams, Mechanism design, Dynamics of machinery, Tribology, Vehicle mechanisms, dynamics and design, Reliability, Experimental methods in mechanisms, Robotics and mechatronics, Biomechanics, Micro/nano mechanisms and machines, Medical/welfare devices, Nature and machines, Design methodology, Reconfigurable mechanisms and reconfigurable manipulators, and Origami mechanisms. This is the fourth installment in the IFToMM Asian conference series on Mechanism and Machine Science (ASIAN MMS 2016). The ASIAN MMS conference initiative was launched to provide a forum mainly for the Asian community working in Mechanism and Machine Science, in order to facilitate collaboration and improve the visibility of activities in the field. The series started in 2010

and the previous ASIAN MMS events were successfully held in Taipei, China (2010), Tokyo, Japan (2012), and Tianjin, China (2014). ASIAN MMS 2016 was held in Guangzhou, China, from 15 to 17 December 2016, and was organized by the South China University under the patronage of the IFToMM and the Chinese Mechanical Engineering Society (CMES). The aim of the Conference was to bring together researchers, industry professionals and students from the broad range of disciplines connected to Mechanism Science in a collegial and stimulating environment. The ASIAN MMS 2016 Conference provided a platform allowing scientists to exchange notes on their scientific achievements and establish new national and international collaborations concerning the mechanism science field and its applications, mainly but not exclusively in Asian contexts.

The Immunobiology of the Dog Springer

This book focuses on the fundamentals and recent advances in RGB-D imaging as well as covering a range of RGB-D applications. The topics covered include: data acquisition, data quality assessment, filling holes, 3D reconstruction, SLAM, multiple depth camera systems, segmentation, object detection, saliency detection, pose estimation, geometric modelling, fall detection, autonomous driving, motor rehabilitation therapy, people counting and cognitive service robots. The availability of cheap RGB-D sensors has led to an explosion over the last five years in the capture and application of colour plus depth data. The addition of depth data to regular RGB images vastly increases the range of applications, and has resulted in a demand for robust and real-time processing of RGB-D data. There remain many technical challenges, and RGB-D image processing is an ongoing research area. This book covers the full state of the art, and consists of a series of chapters by internationally renowned experts in the field. Each chapter is written so as to provide a detailed overview of that topic. RGB-D Image Analysis and Processing will enable both students and professional developers alike to quickly get up to speed with contemporary techniques, and apply RGB-D imaging in their own projects.

A Soldier's Best Friend Carroll & Graf Publishers

The introduction of pen-reared Attwater's prairie-chickens (APC, *Tympanuchus cupido attwateri*) into the wild to supplement existing populations has met with marginal success. Flight characteristics, predator avoidance behavior, and rearing methods are possible factors contributing to post-release mortality of pen-reared birds. To evaluate flight characteristics and predator avoidance behavior of pen-reared APC's released onto the Attwater Prairie Chicken National Wildlife Refuge, flight characteristics and predator avoidance behavior of pen-reared APC's was compared to wild greater prairie-chickens (GPC, *T. c. pinnatus*) in Minnesota and Kansas using a radar gun and a trained dog. There was no difference ($P = 0.134$) in flight speed for pen-reared APC and wild GPC. However, wild GPC had greater (P

Nonlinear Industrial Control Systems presents a range of mostly optimisation-based methods for severely nonlinear systems; it discusses feedforward and feedback control and tracking control systems design. The plant models and design algorithms are provided in a MATLAB® toolbox that enable both academic examples and industrial application studies to be repeated and evaluated, taking into account practical application and implementation problems. The text makes nonlinear control theory accessible to readers having only a background in linear systems, and concentrates on real applications of nonlinear control. It covers: different ways of modelling nonlinear systems

including state space, polynomial-based, linear parameter varying, state-dependent and hybrid; design techniques for nonlinear optimal control including generalised-minimum-variance, model predictive control, quadratic-Gaussian, factorised and H^∞ design methods; design philosophies that are suitable for aerospace, automotive, marine, process-control, energy systems, robotics, servo systems and manufacturing; steps in design procedures that are illustrated in design studies to define cost-functions and cope with problems such as disturbance rejection, uncertainties and integral wind-up; and baseline non-optimal control techniques such as nonlinear Smith predictors, feedback linearization, sliding mode control and nonlinear PID. *Nonlinear Industrial Control Systems* is valuable to engineers in industry dealing with actual nonlinear systems. It provides students with a comprehensive range of techniques and examples for solving real nonlinear control design problems.

Independent Living for Persons with Disabilities and Elderly People Springer

Adverse aircraft-pilot coupling (APC) events include a broad set of undesirable and sometimes hazardous phenomena that originate in anomalous interactions between pilots and aircraft. As civil and military aircraft technologies advance, interactions between pilots and aircraft are becoming more complex. Recent accidents and other incidents have been attributed to adverse APC in military aircraft. In addition, APC has been implicated in some civilian incidents. This book evaluates the current state of knowledge about adverse APC and processes that may be used to eliminate it from military and commercial aircraft. It was written for technical, government, and administrative decisionmakers and their technical and administrative support staffs; key technical managers in the aircraft manufacturing and operational industries; stability and control engineers; aircraft flight control system designers; research specialists in flight control, flying qualities, human factors; and technically knowledgeable lay readers.

Memorized Discrete Systems and Time-delay New Holland Publishers (AU)

From *The Patralmador Paradox*: Pendleton drew a deep breath and shifted uneasily in his chair, 'I know you're going to think this is very strange but, please understand, this is not my idea. I have to ask about your, uh, sexuality.' 'You mean do I like boys or girls, or both? Or neither?' 'I'm hoping you like boys.' He hurriedly added, 'Not that it matters.' Sheila was laughing again, 'You sound like Seinfeld.' 'Who?' 'Never mind. Go on with your questions.' 'Do you like boys and do you enjoy sexual intercourse?' 'Yes. And yes.' Her tone changed and her smile disappeared, 'Both of the above.' 'Good, that's good. Have you had many partners?' 'How many is 'many'?' 'Ten?' 'No.' Sheila marveled at her own patience; the laughing had put her in a good mood but it was fading fast. 'Five?' 'No.' 'Three?' 'Oh, for God's sake! This sucks! What kind of job interview is this? Or is it a job interview? Are you hitting on me? Is that it? I've heard about a Hollywood casting couch but this is ridiculous!' Sheila rose again to leave. 'No, no, no. Please, please. That's not it at all.' He turned the APC toward her. 'I'm just following instructions. I don't want to have sex with you.' She turned and her expression softened, 'Oh, you're gay?' She smiled and added, 'Not that there's anything wrong with that.' but he didn't get it. He answered seriously, 'Gay? Well, I'm reasonably content, most of the time. But I wouldn't say that I'm gay.' Sheila shook her head, 'Very funny.'

Clinical Immunology of the Dog and Cat, Second Edition National Academies Press

Structural Health Monitoring with Piezoelectric Wafer Active Sensors, Second Edition provides an authoritative theoretical and

experimental guide to this fast-paced, interdisciplinary area with exciting applications across a range of industries. The book begins with a detailed yet digestible consolidation of the fundamental theory relating to structural health monitoring (SHM). Coverage of fracture and failure basics, relevant piezoelectric material properties, vibration modes in different structures, and different wave types provide all the background needed to understand SHM and apply it to real-world structural challenges. Moving from theory to experimental practice, the book then provides the most comprehensive coverage available on using piezoelectric wafer active sensors (PWAS) to detect and quantify damage in structures. Updates to this edition include circular and straight-crested Lamb waves from first principle, and the interaction between PWAS and Lamb waves in 1-D and 2-D geometries. Effective shear stress is described, and tuning expressions between PWAS and Lamb waves has been extended to cover axisymmetric geometries with a complete Hankel-transform-based derivation. New chapters have been added including hands-on SHM case studies of PWAS stress, strain, vibration, and wave sensing applications, along with new sections covering essential aspects of vibration and wave propagation in axisymmetric geometries. Comprehensive coverage of underlying theory such as piezoelectricity, vibration, and wave propagation alongside experimental techniques Includes step-by-step guidance on the use of piezoelectric wafer active sensors (PWAS) to detect and quantify damage in structures, including clear information on how to interpret sensor signal patterns Updates to this edition include a new chapter on composites and new sections on advances in vibration and wave theory, bringing this established reference in line with the cutting edge in this emerging area

Encyclopedia of Mobile Computing and Commerce Academic Press

A retired U.S Army scout dog handler chronicles the work he and his canine assistants accomplished during the Vietnam War, sniffing out booby traps and weapons caches under often difficult, dangerous circumstances. Original.

Structural Health Monitoring with Piezoelectric Wafer Active Sensors Springer

The 'Better You' is what the teachers strive to build in their students. 'Better You' is a human being full of basic human values. An individual should grow up with the values of honesty and integrity, respect and concern for the elders and the underprivileged, sincerity and commitment, courage and responsibility, justice and fairness, civic virtue and citizenship and, above all, love and compassion for fellow human beings. The scenario around the globe is changing rapidly and in this world of changes and challenges, demands for quality education are also increasing. We want the "Better You" to be a journey that will enable an individual to cope with the challenges of life with a smile.

This volume looks at assistive technologies for people who have limited independence, and the concept of the smart home, where a user has several heterogeneous systems, providing multiple and complementary functionalities and forming a whole complex environment.

RGB-D Image Analysis and Processing CRC Press

In 1967, the Highway Platoon of B Company, 504th MP Battalion worked out of Pleiku in the central highlands of South Vietnam. Each day the platoon's patrols were scattered over nearly seventy miles of road. The men of the platoon worked with weapons that they had never been trained to use, and they did a job that they had never been trained to do. What they lacked in

training they made up for in spirit, ingenuity, and courage. They learned from experience as they did the job, and they did the job well. In the Autumn of 1967 the Viet Cong hit the highland roads hard, and they did not stop hitting them. When the time came to fight, the men of the Highway Platoon did that well too.

This book examines discrete dynamical systems with memory—nonlinear systems that exist extensively in biological organisms and financial and economic organizations, and time-delay systems that can be discretized into the memorized, discrete dynamical systems. It book further discusses stability and bifurcations of time-delay dynamical systems that can be investigated through memorized dynamical systems as well as

bifurcations of memorized nonlinear dynamical systems, discretization methods of time-delay systems, and periodic motions to chaos in nonlinear time-delay systems. The book helps readers find analytical solutions of MDS, change traditional perturbation analysis in time-delay systems, detect motion complexity and singularity in MDS; and determine stability, bifurcation, and chaos in any time-delay system.

This second edition of a bestseller details the manifestations, diagnosis and treatment of immune-related disease in the dog and cat. It is illustrated throughout in full color, to show and explain to the reader as clearly as possible the complicated principles of disease and immunodiagnostic tests, supported by clinical cases, gross and histopathology, cytology, hematology, immunohistochemistry and other immunological tests.
