STEPHENSON SAGE

Economics of Development MIT Press

This edited collection brings together expertise from around the globe to overview and debate key concepts and concerns in the economics of religion. While the economics of religion is a relatively new field of research in economics, economists have made and continue to make important contributions to the understanding of religion. There is much scope for economists to continue to make a significant contribution to debates about religion, including its implications for conflict, political economy, public goods, demography, education, finance, trade and economic growth.

This second edition of an important text has been substantially revised and updated to incorporate new evidence and arguments regarding poverty in Britain. Comprehensive and accessible, it deals with the problems of definition, measurement and distribution of poverty and analyses the full range of debates about its causes and its possible solution. It is essential reading for students of social policy, sociology, social work and related

social sciences.

Leading Issues in Economic Development Princeton University Press

Drawing upon and extending his inaugural Lipsey Lectures, Debraj Ray looks at coalition formation from the perspective of game theory. Ray brings together developments in both cooperative and noncooperative game theory to study the analytics of coalition formation and binding agreements.

The 2014 edition of Social Panorama of Latin America presents ECLAC measurements for the analysis of income poverty, taking, as well, a multidimensional approach to poverty. Applying these two approaches to data for the countries of the region provides confirmation that despite the progress made over the past decade, structural poverty is still a feature of Latin American society. In order to contribute to a more comprehensive design of public policies aimed at overcoming poverty and socioeconomic inequality, this edition examines recent trends in social spending and sets out a deeper gap analysis focused on three areas: youth and development, gender inequality in the labour market and urban residential segregation.

Frontiers of Development Economics Oxford University Press, USA
The definitive reference on the most current economics of

development and institutions The essential role that institutions play in understanding economic development has long been recognized across the social sciences, including in economics. Academic and policy interest in this subject has never been higher. The Handbook of Economic Development and Institutions is the first to bring together in one single volume the most cutting-edge work in this area by the best-known international economists. The volume's editors, themselves leading scholars in the discipline, provide a comprehensive introduction, and the stellar contributors offer up-to-date analysis into institutional change and its interactions with the dynamics of economic development. This book focuses on three critical issues: the definitions of institutions in order to argue for a causal link to development, the complex interplay between formal and informal institutions, and the evolution and coevolution of institutions and their interactions with the political economy of development. Topics examined include the relationship between institutions and growth, educational systems, the role of the media, and the intersection between traditional systems of patronage and political institutions. Each chapter—covering the frontier research in its area and pointing to new areas of research—is the product of extensive workshopping on the part of the contributors. The definitive reference work on this topic, The Handbook of Economic Development and Institutions will be essential for academics, researchers, and professionals working in the field. Fragility and Conflict MIT Press

This volume, first published in 1982, is a collection of original essays written to honour Professor W. Arthur Lewis, 1979 co-winner of the Nobel Prize in economics. The authors, an

international group of distinguished scholars, address a varied set of specific issues reflecting Professor Lewis' research interests, covering topics which include: technological change in agriculture, analyses of unemployment and income distribution, the role of government policy in the development process, the historical record of development, and the relationship between developed and developing nations. The book will be of interest to both the academic researcher and practicing professionals in the international organisations and national governments, and are particularly appropriate to graduate courses in economic development, cost-benefit analysis and economic history.

NEW FRONTIERS IN ECONOMICS

Routledge

The winners of the Nobel Prize show how economics, when done right, can help us solve the thorniest social and political problems of our day. Figuring out how to deal with today's critical economic problems is perhaps the great challenge of our time. Much greater than space travel or perhaps even the next revolutionary medical breakthrough, what is at stake is the whole idea of the good life as we have known it. Immigration and inequality, globalization and technological disruption, slowing growth and accelerating climate change--these are sources of great anxiety across the world, from New Delhi and Dakar to Paris and Washington, DC. The resources to address these challenges are there--what we lack are ideas that will help us jump the wall of disagreement and distrust that divides us. If we succeed, history will remember our era with gratitude; if we fail, the potential losses are incalculable. In this revolutionary book, renowned MIT

economists Abhijit V. Banerjee and Esther Duflo take on this challenge, building on cutting-edge research in economics explained with lucidity and grace. Original, provocative, and urgent, *Good Economics for Hard Times* makes a persuasive case for an intelligent interventionism and a society built on compassion and respect. It is an extraordinary achievement, one that shines a light to help us appreciate and understand our precariously balanced world.

A Game-Theoretic Perspective on Coalition Formation

University of Chicago Press

Now in its seventh edition, *Leading Issues in Economic Development* introduces a new co-author, James E. Rauch. Maintaining the unique structure that the book has established over the last 35 years, Rauch has revised and updated this seventh edition to strengthen the analytical and quantitative dimensions and to clarify contemporary and future problems of development policy. The co-authors integrate the most insightful materials in this wide-ranging field, offering students the opportunity to experience a variety of perspectives while helping them to keep sight of overarching themes. This edition adds two new chapters: "Income Distribution" and "Development and the

Environment." It also now consolidates several chapters and increases the number of selections from leading professional journals. In this edition, both the selections and the authors' own overviews, notes, comments, and exhibits make greater use of empirical analysis as well as modern economic theory. In all, *Leading Issues in Economic Development* provides fresh and serious attention to the interplay between development experience, changing views of economists, and policy.

Development, Distribution, and Markets United Nations Gerard Roland's new text, *Development Economics*, is the first undergraduate text to recognize the role of institutions in understanding development and growth. Through a series of chapters devoted to specific sets of institutions, Roland examines the effects of institutions on growth, property rights, market development, and the delivery of public goods and services and focuses. With the most comprehensive and up to date treatment of institutions on development, Roland explores the important questions of why some countries develop faster than others and why some fail while others are successful.

Why economists' attempts to help poorer countries improve their economic well-being have failed. Since the end of World War II, economists have tried to figure out how poor countries in the tropics could attain standards of living approaching those of countries in Europe and North America. Attempted remedies have included providing foreign aid, investing in machines, fostering education, controlling population growth, and making aid loans as well as forgiving those loans on condition of reforms. None of these solutions has delivered as promised. The problem is not the failure of economics, William Easterly argues, but the failure to apply economic principles to practical policy work. In this book Easterly shows how these solutions all violate the basic principle of economics, that people—private individuals and businesses, government officials, even aid donors—respond to incentives. Easterly first discusses the importance of growth. He then analyzes the development solutions that have failed. Finally, he suggests alternative approaches to the problem. Written in an accessible, at times irreverent, style, Easterly's book combines modern growth theory with anecdotes from his fieldwork for the World Bank.

CULTURE AND PUBLIC ACTION

Food First Books

This volume is a testament to the breadth and policy relevance of development economics today. It grapples with questions on how to design anti-poverty policies and under what conditions we can expect them to be successful. It concentrates on programmes and policies for India and covers international experience with cash transfer programmes. The work in this area applies core

theoretical insights to policy discussions surrounding poverty measurement, income inequality, rural unemployment, and compares alternative growth strategies in terms of their impact on poverty and inequality. The book closes with chapters that trespass the boundaries of economics and enter the territory of politics, to engage urgent concerns of the day that are the basis of much dispute and debate. The essays are collected under three broad themes—anti-poverty policies; land, labour, and financial markets; and political economy.

Social Panorama of Latin America 2014 W. W. Norton

Understanding poverty and what to do about it, is perhaps the central concern of all of economics. Yet the lay public almost never gets to hear what leading professional economists have to say about it. This volume brings together twenty-eight essays by some of the world leaders in the field, who were invited to tell the lay reader about the most important things they have learnt from their research that relate to poverty. The essays cover a wide array of topics: the first essay is about how poverty gets measured. The next section is about the causes of poverty and its persistence, and the ideas range from the impact of colonialism and globalization to the problems of "excessive" population growth, corruption and ethnic conflict. The next section is about policy: how should we fight poverty? The essays discuss how to get drug companies to produce more vaccines for the diseases of the poor, what we should and should not expect from micro-credit, what we should do about child labor, how to design welfare policies that work better and a host of other topics. The

final section is about where the puzzles lie: what are the most important anomalies, the big gaps in the way economists think about poverty? The essays talk about the puzzling reluctance of Kenyan farmers to fertilizers, the enduring power of social relationships in economic transactions in developing countries and the need to understand where aspirations come from, and much else. Every essay is written with the aim of presenting the latest and the most sophisticated in economics without any recourse to jargon or technical language.

UNDERSTANDING POVERTY

World Bank Publications

The study of development in low-income countries is attracting more attention around the world than ever before. Yet until now there has been no comprehensive text that incorporates the huge strides made in the subject over the past decade. Development Economics does precisely that in a clear, rigorous, and elegant fashion. Debraj Ray, one of the most accomplished theorists in development economics today, presents in this book a synthesis of recent and older literature in the field and raises important questions that will help to set the agenda for future research. He covers such vital subjects as theories of economic growth, economic inequality, poverty and undernutrition, population growth, trade policy, and the markets for land, labor, and credit. A common point of view underlies the treatment of these subjects: that much of the development process can be understood by studying factors that impede the efficient and equitable functioning of markets. Diverse topics such as the new growth theory, moral hazard in land contracts, information-based

theories of credit markets, and the macroeconomic implications of economic inequality come under this common methodological umbrella. The book takes the position that there is no single cause for economic progress, but that a combination of factors-- among them the improvement of physical and human capital, the reduction of inequality, and institutions that enable the background flow of information essential to market performance-- consistently favor development. Ray supports his arguments throughout with examples from around the world. The book assumes a knowledge of only introductory economics and

explains sophisticated concepts in simple, direct language, keeping the use of mathematics to a minimum. Development Economics will be the definitive textbook in this subject for years to come. It will prove useful to researchers by showing intriguing connections among a wide variety of subjects that are rarely discussed together in the same book. And it will be an important resource for policy-makers, who increasingly find themselves dealing with complex issues of growth, inequality, poverty, and social welfare.
