Working with  
Indigenous  
Knowledge: A  
guide for  
researchers

**WORKING  
WITH  
INDIGENOUS  
KNOWLEDGE**

Routledge  
This open  
access book  
presents a  
strong  
philosophical,  
theoretical  
and practical  
argument for  
the  
mainstreamin  
g of

indigenous  
knowledge in  
curricula  
development,  
and in  
teaching and  
learning  
across the  
African  
continent.  
Since the  
dawn of  
political  
independence  
in Africa, there  
has been an  
ongoing  
search for the  
kind of  
education that  
will create a  
class of  
principled and  
innovative  
citizens who  
are sensitive  
to and  
committed to  
the needs of  
the continent.  
When  
indigenous or

environment-  
generated  
knowledge  
forms the  
basis of  
learning in  
classrooms,  
learners are  
able to  
immediately  
connect their  
education with  
their lived  
reality. The  
result is much  
introspection,  
creativity and  
innovation  
across fields,  
sectors and  
disciplines,  
leading to  
societal  
transformation  
. Drawing on  
several  
theoretical  
assertions,  
examples  
from a wide  
range of  
disciplines,

and experiences gathered from different continents at different points in history, the book establishes that for education to trigger the necessary transformation in Africa, it should be constructed on a strong foundation of learners' indigenous knowledge. The book presents a distinct and uncharted pathway for Africa to advance sustainably through

home-grown and grassroots based ideas, leading to advances in science and technology, growth of indigenous African business and the transformation of Africans into conscious and active participants in the continent's progress. Indigenous Knowledge and Education in Africa is of interest to educators, entrepreneurs, , policymakers, researchers and individuals

engaged in finding sustainable and strategic solutions to regional and global advancement. Indigenous knowledge and sustainable development in the novels of Daniel Fagunwa Duke University Press  
The potential of indigenous knowledge is being recognized for international development. This book argues that local people do know their environment, and that this knowledge

has to be taken into account in planning and implementing accessible and effective development.

Practical Action  
While science has achieved a remarkable understanding of nature, affording humans an astonishing technological capability, it has led, through Euro-American global domination, to the muting of other cultural views and values, even threatening their continued existence. There is a growing realization that the diversity of knowledge

systems demand respect, some refer to them in a conservation idiom as alternative information banks. The scientific perspective is only one. We now have many examples of the soundness of local science and practices, some previously considered "primitive" and in need of change, but this book goes beyond demonstrating the soundness of local science and

arguing for the incorporation of others' knowledge in development, to argue that we need to look quizzically at the foundations of science itself and further challenge its hegemony, not only over local communities in Africa, Asia, the Pacific or wherever, but also the global community. The issues are large and the challenges are exciting, as addressed in this book, in a range of ethnographic

and institutional contexts. **Culture, Indigenous Knowledge and Development** BRILL  
This book covers computer aided analysis of qualitative data and the use of cross-cultural research staff, and is grounded in anthropological and development research and contemporary reflective practice. Whatever your interest in indigenous knowledge you will find

this book a  
fascinating  
and insightful  
handbook.

indigenous  
knowledge at  
national and  
municipal  
levels.  
Showcasing  
alternative  
strategies for  
making  
culture central  
to  
development,

this book discusses opportunities to shift culture and indigenous knowledge from the peripheries and place them at the epicentre of sustainable development and the mainstream of cultural planning, which can then be applied in the contexts of Africa and the Global South. Governmental institutions, research councils, civil society organisations, private sector, and higher

education institutions come together in a joint effort to explain the nexus between culture, economic development, rural-urban linkages, grassroots and technological innovations. Culture and Rural-Urban Revitalization in South Africa is an ideal read for those interested in rural and urban planning, cultural policy, indigenous knowledge and smart rural village model.

**Knowledge Systems and Development in Africa**

Psychology Press

This book illustrates the growing need for real understanding of local knowledge strategy and its power to assist in positive change.

Indigenous Development in the Andes

Psychology Press

This book highlights the importance of diversity in overcoming issues of social and environmental degradation. It

presents conceptual and practical strategies to celebrate local and Indigenous knowledge for improved community development and environmental management. David Harvey has proclaimed, "The geography we make must be a peoples' geography." This clarion call challenges geographers around the world to consider the power and potential of geographic knowledge as

the basis for social action – a call this book answers, providing readers the theoretical and conceptual tools needed to understand the social world and empowering them to mobilize social change. The author uses empirical case studies of two environmental management and community development projects to document how knowledge generation is "essentially locally situated and

socially derived." In doing so she charts a path for moving beyond what Vandana Shiva so aptly describes as "monocultures of the mind." The book argues that local and Indigenous knowledge must not be seen in opposition to scientific knowledge, as none of these knowledge traditions hold all the answers to localized socio-environmental problems. Rather, as the author

explores through a set of processes and strategies to enable, support and celebrate 'cultural hybridity' at the local environmental governance scale, these respective knowledge systems can learn to speak to each other. Such dialogue has the potential to support more sustainable outcomes at multiple environmental governance locales. This book will be of interest to everyone involved in

environmental policy, planning or politics, and for those who want to make this planet a more sustainable and just place. *Nature is Culture* University of Toronto Press  
The so-called virgin forests of the world owe much to their symbiotic relationship with the indigenous peoples who live in and on the margins of them. This startling message will have far-reaching implications

for all concerned with conservation.

African Books Collective  
Indigenous Knowledge and Development: Livelihoods, Health Experiences, and Medicinal Plant Knowledge in a Mexican Biosphere Reserve provides an ethnographic account of the Nahua, a group of indigenous people living in a protected area in west central Mexico. The study moves

back and forth between the macro and micro to explore the relationships between three central axes—health, livelihood and cultural knowledge. This anthropological study presents analysis based on household level socioeconomic data and cultural knowledge measured through the use of both structured and semi-structured interviews. Themes that emerge tell

the story of contemporary struggles related to governance, cultural heritage, indigenous identities, conservation, and community development. This research contributes to ethnographic knowledge about conservation and cultural heritage on protected areas in Mexico. Cultural Hybridity and the Environment Anthropology, Culture, and Indigenous

knowledges are the subject of much discussion and debate in many contemporary academic fields. This is no less true in the fields of education and development studies—two fields with long histories of interaction with indigenous knowledges and peoples. Yet, despite this similar level of interest and interaction, there has yet to emerge a book that draws together the

two fields as they interact with and learn from indigenous epistemologies.

*Traditional Ecological Knowledge*

Springer

Since time immemorial, indigenous peoples around the world have developed knowledge systems to ensure their continued survival in their respective territories. These knowledge systems have always been dynamic such that they

could meet new challenges. Yet, since the so-called enlightenment period, these knowledges have been supplanted by the Western enlightenment science or colonial science hegemony and arrogance such that in many cases they were relegated to the periphery. Some Eurocentric scholars even viewed indigenous knowledge as superstitious, irrational and anti-development.

This erroneous view has, since the colonial period, spread like veld fire to the extent of being internalised by some political elites and Eurocentric academics of Africa and elsewhere. However, for some time now, the potential role that indigenous peoples and their knowledge can play in addressing some of the global problems haunting humanity

across the world is increasingly emerging as part of international discourse. This book presents an interesting and insightful discourse on the state and role that indigenous knowledge can play in addressing a tapestry of problems of the world and the challenges connected with the application of indigenous knowledge in enlightenment science-dominated contexts. The book is not

only useful to academics and students in the fields of indigenous studies and anthropology, but also those in other fields such as environmental science, social and political ecology, development studies, policy studies, economic history, and African studies. The Arts and Indigenous Knowledge Systems in a Modernized Africa Springer Nature Master's Thesis from the year 2016

in the subject Literature - Africa, , language: English, abstract: This study reveals that Fágúnwà, in his five novels, consciously addresses the issue of sustainable development through the use of indigenous knowledge. Fágúnwà, for instance, emphasises the utilisation of the Yorùbá indigenous knowledge, such as its medicine and health care, the indigenous corpus of folktales and

fables, the indigenous technology among others, for sustainable development. His inclusion of the moonlight tales in his novels is a weapon for sustainable development by inculcating the right virtues in the children and ensuring the subsistence of their indigenous culture. This will help the children to become good future leaders and members of the community. He encourages

subsistence farming by all households in order to reduce hunger, unemployment and to inculcate hard work in the children. This will lead to sustainable development of self-reliance in every family. Fágúnwà also espouses relationship with neighbouring and far away towns in order to acquire more knowledge for sustainable development. He supports voyage to gain

knowledge on administration , management and peaceful existence. Àkàrà Ògùn, Olówó-aiyé, Ìrèké and Àdítú all embark on expeditions to sustain their communities. These, among others, are Fágúnwà's ways of projecting sustainable development through the Yorùbá indigenous knowledge. Hence, this study concludes that Fágúnwà's novels, through its reflection of the Yorùbá

indigenous knowledge, project sustainable development. This means the Yorùbá indigenous knowledge if well employed will aid sustainable development. Therefore, the focus of this study on the reflection of indigenous knowledge and sustainable development in Fágúnwà novels, is believed, will instigate scholars to study more on the concept of indigenous knowledge, its significance

and relevance to sustainable development.

### **INDIGENOUS KNOWLEDGE IN THE TECHNOLOGICAL DEVELOPMENT OF NIGERIA. MERITS AND DEMERITS**

Intermediate Technology Publications  
This volume is a comprehensive collection of critical essays on The Taming of the Shrew, and includes extensive discussions of the play's various printed

versions and its theatrical productions. Aspinall has included only those essays that offer the most influential and controversial arguments surrounding the play. The issues discussed include gender, authority, female autonomy and unruliness, courtship and marriage, language and speech, and performance and theatricality. **Indigenous Knowledge Inquiries**

The Cultural Dimension of Development Practical Action

## **EDUCATION, MODERN DEVELOPMENT, AND INDIGENOUS KNOWLEDGE**

Berghahn Books

The continent of Africa is richly endowed with diverse cultures, a body of indigenous knowledge and technologies. These bodies of knowledge and technologies that are indeed embodied in

the diverse African cultures are as old as humankind. From time immemorial, they have been used to solve socio-economic, political, health, and environmental problems, and to respond to the development needs of Africans. Yet with the advent of colonialism and Western scientism, these African cultures, knowledges, and technologies have been despised and

relegated to the periphery, to the detriment of the self-reliant development of Africans. It is out of this observation and realisation that this book was born. The book is an exploration of the practical problems resulting from Africa's encounter with Euro-colonialism, a reflection of the nexus between indigenous knowledge, culture, and development, and indeed a call for the revival and reinstitution of

indigenous knowledge, not as a challenge to Western science, but a complementary form of knowledge necessary to steer and promote sustainable development in Africa and beyond. This is a valuable book for policy makers, institutional planners, practitioners and students of social anthropology, education, political and social ecology, and development, African and heritage studies.
