*Broken Hearts* Lippincott Williams & Wilkins

This short book focuses on the possible examination questions and their answers on the cardio-vascular system. In the era of modern technology and the internet of things, student learning has gone beyond the approved textbooks and teachers due to the overload of information that is easily available on the internet using different search engines. The trend and fashion are so deep-rooted to the extent that the Google search engine is the 'Bible' for everyone. These days' students do a common mistake of going through information overload and assuming the information available on the web as knowledge. It is very well true for medical students; information overload confuses the mind and focus of study. This book aids a learner of the cardiovascular system, to know the appropriate depth of knowledge that one needs to know. In the evaluation-based academic assessment, student knowledge is measured by different methods of assessment tools such as written examinations such as long essay, short essay, viva-voce, etc. This book provides comprehensive and concise knowledge based on a

question so that a student develops an awareness that helps to frame the answer required for a question.

### **BRAUNWALD'S HEART DISEASE REVIEW AND ASSESSMENT E-BOOK**

Lippincott Williams & Wilkins

In 1999 the American Board of Interventional Medicine is offering, for the first time, what will be an annual certification examination in Interventional Cardiology. Board certification is designed to recognize excellence among physicians specializing in interventional cardiology. Interventional Cardiology: The Essentials for the Boards is the first book to be written in accordance with the American Board of Interventional Medicine's own guidelines. The book is structured to accurately represent the balance of subject matter that can be expected on the certification examination. Care is taken to cover the essential points in each individual topic, highlighting state-of-the-art therapy and unresolved issues. Most chapters are presented in a question-and-answer format, along with a chapter of clinical case descriptions covering a broad range of clinical and interventional problems. A special chapter of "Interventional Cardiology Pearls" provides condensed, easily digested summaries of the most useful information in the previous chapters. In addition, it is the first book of its kind to include a detailed Table of Contents and a Subject Index, making it easy for the examinee to locate specific topics. This book will be of great help to interventional

cardiologist specialists preparing for the board certification exams. General cardiologists, cardiology nurses, cardiac catheterization lab support staff, and general cardiology fellows interested in increasing their understanding of intervention and related topics will also find this work useful.
