General Surgical Operations is a highly-praised and comprehensive textbook of operative surgery. It is a practical manual aimed at the surgeon who is about to carry out an operation, rather than just a description of the principles suitable for an examiner. Kirk's General Surgical Operations continues to be aimed at a broad readership: the candidate preparing for the Intercollegiate FRCS in General Surgery or international equivalents; the trained surgeon faced, through necessity, with undertaking an infrequently performed procedure; and the many surgeons working in hospitals throughout the world without access to specialist services. It remains above all a practical text which will guide the surgeon in training, or one unfamiliar with a procedure, on how to perform it, but more importantly on how to manage the uncertainties which so often arise This is a 'What to do' book. Using it the reader can

aspire to gain diagnostic, decision making and operative surgical competence with confidence. The book is written in a clear and direct style and providing explicit instructions using descriptive headings for easy reference. The contents covers standard routine operations in full; non-routine and rarely performed operations are included only where appropriate and in lesser detail The text includes advice on topics such as patient selection; preparation and access to the site of operation; how to accomplish the procedure; closing and aftercare Difficulties are highlighted and advice given on how to respond to unexpected findings Each procedure is fully described thus avoiding repetitions and cutting cross-references to a minimum Regular summaries of key points in the decision making process are included. This Sixth Edition is now known as Kirk's General Surgical Operations in recognition of its distinguished founding editor, Professor RM Kirk, who is now Editor Emeritus on the textbook. The new editorial team for the Sixth Edition comprises a colorectal

surgeon, a vascular surgeon and an orthopaedic surgeon. The contents have been restructured and radically revised into 42 chapters, the majority of which have been completely rewritten.

Laparoscopic techniques have been incorporated into all relevant chapters. All the illustrations have been redrawn to improve their clarity.

Fundamental Skills for Surgery 3e Elsevier Health Sciences

A comprehensive selection of multiple-choice questions for the 'Part 1' of the Membership of the Royal College of Surgeons (England) examination and its Scottish equivalent the AFRCs. Questions have been chosen to reflect the structure of the examination and include many that are similar to those that were asked over the last few years. Both the Core Module and the System Module of the examination are covered. Detailed answers are provided. Kefah Mokbel has written a number of books for the surgical examinations as well as for other professional examinations and is also the principal lecturer on the MasterPass MRCS course. This book reflects his considerable experience of the MRCS examination and

will be invaluable to candidates preparing for this examination.

The new Excellence in Surgery from CRC Press comprises five practical texts to address the needs of the Intercollegiate MRCS Examination. Historically, each of the four Royal Colleges of Surgeons in the UK and Ireland (RCS England, RCS Edinburgh, RCPS Glasgow, RCS Ireland) had its own FRCS examination, with varying degrees of reciprocity of the component parts. However, after many years of negotiation, the colleges have now agreed on a single Intercollegiate FRCS (fellowship) examination - this includes the MRCS (member of the Royal College of Surgeons), an examination that

attracts over 800 candidates each year. The new MRCS curriculum covers a wide range of subjects: basic sciences (anatomy, physiology, pharmacology, pathology), basic surgical skills, patient assessment and management, and the basic content of all ten surgical subspecialties. A number of traditional texts address the needs of the previous MRCS examinations, but this new Excellence in Surgery Series fills the need for a contemporary series that covers all aspects of the new examination (excluding anatomy). The Editorial Team includes two Senior Trainees (Massey and Saha) who have recent exposure to the Intercollegiate Examination: they both have established a path in teaching and medical writing, and have a network of peers, with similar experience, keen to provide relevant chapters. The third editor (Lumley) has wide experience writing and editing texts across surgical and other medical fields. The second volume in the series covers Basic Surgical Skills, including surgical safety, procedural skills, basic operative skills and non-technical skills for surgeons.

It provides an excellent introduction to the basic principles of surgery, using a systematic, logical approach to the subject and assuming minimal surgical knowledge. In this easy to understand, practical book, the core elements of basic surgical skills are outlined: Surgical conduct, surgical decision making, surgical safety, sterile technique, Surgical instruments, Needles and sutures, Energy sources in surgery, Ergonomics in surgery, Basic operative skills, Wound management, Local anaesthesia, Joint aspiration, Joint reduction, Fracture Fixation, and Rigid Endoscopy. *Fundamental Skills for Surgery* contains over 200 helpful illustrations to guide the reader through simple surgical techniques and show and describe the instruments involved. Written in clear, non-technical language, Richard Perry and

colleagues from the ASSET committee of the Board of Basic Surgical Training of the Royal Australasian College of Surgeons draw on years of practice and training experience to explain the simplest concepts in a step by step approach. While designed as an instructive manual for medical students and basic surgical trainees (BSTs) of the Australasian and United Kingdom surgical colleges, this book also has a wider application for emergency medicine physicians, obstetric and gynaecology trainees, procedural general practitioners, surgical nursing staff, operating theatre nurses and others who perform or need to understand surgical procedures.

**Basic Surgical Skills** CRC Press  
Apprentices in surgery need a basic set of practical skills in order to care for their patients well. Although many of these skills are the same as those used by their 20th century predecessors, today's trainees need to keep abreast of rapidly changing and advancing technologies that were not available even ten years go. At the same time, basic surgical training for medical students and for junior doctors is being compressed into a shorter timeframe, as other medical specialties evolve and need to be taught in growing curricula. There is increasing emphasis on communication skills, and self-directed learning in many undergraduate programmes, and the student of surgery today has, therefore, to learn more in less

available time. He or she will have less 'hands on' experience in theatre, ward or clinic and inevitably the practical aspects of surgery tend to suffer. This book aims to facilitate the more rapid learning required in a modern surgical programme, with concise chapters on the main techniques that need to be mastered in the early years of training. It is intended to be read by senior medical students, and housemen or interns, but may also be a useful revision for those about to take their first surgical postgraduate examinations. This book is written by working general surgeons to enhance the practical training of their own teams. It is also an international collaboration between London and New Delhi, and will be of use to students studying the art and science of surgery everywhere. It is not an exhaustive reference book, but more of a brief guide, to be used as a learning tool mainly in operating theatres and emergency rooms. It contains simple lists and diagrams with no superfluous text. There are clear explanations which should aid students, from scrubbing up to suturing up.
