George and the Blue Moon Cambridge
University Press

We are the first generation to live in a science fiction world. Media headlines declare this the age of automation. The TV talks about the coming revolution of the robot, tweets tell tales of jets that will ferry travelers to the edge of space, and social media reports that the first human to live for a thousand years has already been born. The science we do, the movies we watch, and the culture we consume is the stuff of fiction that became fact, the future imagined in our past—the future we now inhabit. The Science of Science Fiction is the story of how science fiction shaped our world. No longer a subculture, science fiction has moved into the mainstream with the advent of the information age it helped realize. Explore how science fiction has driven science, with topics that include: Guardians of the Galaxy: Is Space Full of Extraterrestrials? Jacking In: Will the Future Be Like Ready Player One? Mad Max: Is Society Running down into Chaos? The Internet: Will Humans Tire of Mere Reality? Blade Runner 2049: When Will We Engineer Human Lookalikes? And many more! This book will open your eyes to the way science fiction helped us dream of things to come, forced us to explore the nature and limits of our own reality, and aided us in

building the future we now inhabit.

THE IDEA OF THE WORLD

W. W. Norton & Company

In recent years science and philosophy have seen a resurgence of open-mindedness toward deeper views of consciousness. This book explores ideas and evidence now changing the way scientists and philosophers approach the place of consciousness in the universe. From the frontiers of modern physics and cosmology to controversial experiments exploring telepathy and mind-matter interaction, the emerging view promises to change how we understand our place in the universe, our relationship to other life, and the nature of reality itself.

Laudato Si BenBella Books, Inc.

Shares provocative and revelatory answers to such philosophical conundrums as the origins of the universe and how it will end, offering scientific explanations about the immense process through which life evolved.

Is Biocentrism Dead? Oxford
University Press

From the speed of light to moving mountains--and everything in between--ZOOM explores how the universe and its objects move. If you sit as still as you can in a quiet room, you might be able to convince yourself that nothing is moving. But air currents are still wafting around you. Blood rushes through your veins. The atoms in your chair jiggle furiously. In fact, the planet you are sitting on is whizzing through space thirty-five times faster than the speed of

sound. Natural motion dominates our lives and the intricate mechanics of the world around us. In ZOOM, Bob Berman explores how motion shapes every aspect of the universe, literally from the ground up. With an entertaining style and a gift for distilling the wondrous, Berman spans astronomy, geology, biology, meteorology, and the history of science, uncovering how clouds stay aloft, how the Earth's rotation curves a home run's flight, and why a mosquito's familiar whine resembles a telephone's dial tone. For readers who love to get smarter without realizing it, ZOOM bursts with science writing at its best. [Understanding Biocentrism: The True Nature of the Universe Revealed](#)

A Sand County Almanac Speedy Publishing LLC

Where the science of black holes, gravitational waves, and time travel will likely lead us, as reported by spacetime's most important theoreticians and observers.

The Physics of God Polity

For all the discussion in the media about creationism and 'Intelligent Design', virtually nothing has been said about the evidence in question - the evidence for evolution by natural selection. Yet, as this succinct and important book shows, that evidence is vast, varied, and magnificent, and drawn from many disparate fields of science. The very latest research is uncovering a stream of evidence revealing evolution in action - from the actual observation of a species splitting into two, to new fossil discoveries, to the deciphering of the evidence stored in our genome. Why Evolution is True weaves together the many threads of modern work in genetics, palaeontology, geology,

molecular biology, anatomy, and development to demonstrate the 'indelible stamp' of the processes first proposed by Darwin. It is a crisp, lucid, and accessible statement that will leave no one with an open mind in any doubt about the truth of evolution.

Biocentrism [ReadHowYouWant.com](#)

A rigorous case for the primacy of mind in nature, from philosophy to neuroscience, psychology and physics. The Idea of the World offers a grounded alternative to the frenzy of unrestrained abstractions and unexamined assumptions in philosophy and science today. This book examines what can be learned about the nature of reality based on conceptual parsimony, straightforward logic and empirical evidence from fields as diverse as physics and neuroscience. It compiles an overarching case for idealism - the notion that reality is essentially mental - from ten original articles the author has previously published in leading academic journals. The case begins with an exposition of the logical fallacies and internal contradictions of the reigning physicalist ontology and its popular alternatives, such as bottom-up panpsychism. It then advances a compelling formulation of idealism that elegantly makes sense of - and reconciles - classical and quantum worlds. The main objections to idealism are systematically refuted and empirical evidence is reviewed that corroborates the formulation presented here. The book closes with an analysis of the hidden psychological motivations behind mainstream physicalism and the implications of idealism for the way we relate to the world.

George and Annie are off on another cosmic adventure inspired by the Mars

Expedition in the fifth book of the George's Secret Key series from Stephen and Lucy Hawking. George and his best friend, Annie, have been selected as junior astronauts for a program that trains young people for a future trip to Mars. This is everything they've ever wanted—and now they get to be a part of up-to-the minute space discoveries and meet a bunch of new friends who are as fascinated by the universe as they are. But when they arrive at space camp, George and Annie quickly learn that strange things are happening—on Earth as well as up in the skies. Mysterious space missions are happening in secret, and the astronaut training they're undertaking gets scarier and scarier...

The Future of Spacetime Speedy Publishing LLC

Many subscribe to an Ethic of Life, an ethical perspective on which all living things deserve some level of moral concern. Within philosophy, the Ethic of Life has been clarified, developed, and rigorously defended; yet it has also found its harshest critics. Between biocentrists, those that endorse the Ethic of Life, and those that accept a more restricted view of moral status, the debate has reached a standstill, with few new resources for shifting or complicating it. In *The Death of the Ethic of Life*, John Basl seeks to end this comfortable stalemate by emphasizing a simple truth: the well-being of non-sentient beings, such as plants, species, and ecosystems, is morally significant only to the extent that it matters to sentient beings. Basl first develops a version of The Ethic of Life that best meets traditional challenges: the Ethic, if it is to survive criticism, must be able to explain how it is that all living things have a welfare or a good of their own.

The best hope of offering such an explanation is to ground that welfare in teleology or goal-directedness, and then to ground that goal-directedness in the workings of natural selection. While a naturalistic account of teleology is crucial to defending an Ethic of Life, it is also its downfall. This Ethic ultimately entails that not only are ecosystems and collectives morally considerable, but so, too, are artifacts: everything from can openers to computers. Basl shows that evaluation of the resources for distinguishing artifacts from organisms forces us to abandon, for good, the Ethic of Life. *The Death of the Ethic of Life* provides not only a new answer to a fundamental question in environmental ethics, but a new way to conceive of fundamental concepts and issues in debates over who or what matters from the moral point of view, with wide-ranging implications in the philosophy of technology and bioethics.

The Intelligence of the Cosmos Oxford University Press

Biocentrism shocked the world with a radical rethinking of the nature of reality. But that was just the beginning. In *Beyond Biocentrism*, acclaimed biologist Robert Lanza, one of TIME Magazine's "100 Most Influential People in 2014," and leading astronomer Bob Berman, take the reader on an intellectual thrill-ride as they re-examine everything we thought we knew about life, death, the universe, and the nature of reality itself. The first step is acknowledging that our existing model of reality is looking increasingly creaky in the face of recent scientific discoveries. Science tells us with some precision that the universe is 26.8 percent dark matter, 68.3 percent dark energy, and only 4.9 percent ordinary matter, but must confess that it doesn't really know what dark matter is

and knows even less about dark energy. Science is increasingly pointing toward an infinite universe but has no ability to explain what that really means. Concepts such as time, space, and even causality are increasingly being demonstrated as meaningless. All of science is based on information passing through our consciousness but science hasn't the foggiest idea what consciousness is, and it can't explain the linkage between subatomic states and observation by conscious observers. Science describes life as a random occurrence in a dead universe but has no real understanding of how life began or why the universe appears to be exquisitely designed for the emergence of life. The biocentrism theory isn't a rejection of science. Quite the opposite. Biocentrism challenges us to fully accept the implications of the latest scientific findings in fields ranging from plant biology and cosmology to quantum entanglement and consciousness. By listening to what the science is telling us, it becomes increasingly clear that life and consciousness are fundamental to any true understanding of the universe. This forces a fundamental rethinking of everything we thought we knew about life, death, and our place in the universe.

The Science of Science Fiction

Biocentrism

In his ground-breaking new textbook, Mick Fryer offers students of Business Ethics clear explanations of a range of theoretical perspectives, along with examples of how these perspectives might be used to illuminate the ethical challenges presented by business practice. The book includes: Realistic scenarios which gently introduce a theory and demonstrate how it can be applied to a real-life ethical dilemma that everyone can relate to, such as

borrowing money from a friend Real organisational case studies in each chapter which illustrate how each theory can be applied to real business situations. Cases include Nike, Coca Cola, BMW, Shell, Starbucks and GSK 'Pause for Reflection' boxes and 'Discussion Questions' which encourage you to challenge the established notions of right and wrong, and empower you to develop your own moral code Video Activities in each chapter with accompanying QR codes which link to documentaries, films, debates and news items to get you thinking about real-life ethical dilemmas Visit the book's companion website for self-test questions, additional web links and more at: study.sagepub.com/fryer

SAGE

First published 1979, first issued as an Oxford University paperback 1982.

ABOUT TIME

Benbella Books

What rational justification is there for conceiving of all living things as possessing inherent worth? In *Respect for Nature*, Paul Taylor draws on biology, moral philosophy, and environmental science to defend a biocentric environmental ethic in which all life has value. Without making claims for the moral rights of plants and animals, he offers a reasoned alternative to the prevailing anthropocentric view--that the natural environment and its wildlife are valued only as objects for human use or enjoyment. *Respect for Nature* provides both a full account of the biological conditions for life--human or otherwise--and a comprehensive view of the complex relationship between human beings and the whole of nature. This classic book remains a valuable resource for philosophers, biologists, and

environmentalists alike--along with all those who care about the future of life on Earth. A new foreword by Dale Jamieson looks at how the original 1986 edition of *Respect for Nature* has shaped the study of environmental ethics, and shows why the work remains relevant to debates today.

Origins of Consciousness: How the Search to Understand the Nature of Consciousness is Leading to a New View of Reality

John Hunt Publishing
A leading neuroscientist and New York Times bestselling author of *Mozart's Brain and the Fighter Pilot* distills the research on the brain and serves up practical, surprising, and illuminating recommendations for warding off neurological decline, cognitive function, and encouraging smarter thinking day to day. In *Think Smart*, the renowned neuropsychiatrist and bestselling author Dr. Richard Restak details how each of us can improve and tone our body's most powerful organ: the brain. As a renowned expert on the brain, Restak knows that in the last five years there have been exciting new scientific discoveries about the brain and its performance. So he's asked his colleagues--many of them the world's leading brain scientists and researchers--one important question: What can I do to help my brain work more efficiently? Their surprising--and remarkably feasible--answers are at the heart of *Think Smart*. Restak combines advice culled from cutting-edge research with brain-tuning exercises to show how individuals of any age can make their brain work more effectively. In the same accessible prose that made *Mozart's Brain and the Fighter Pilot* a New York Times bestseller, Restak presents a wide array of practical recommendations about a variety of topics, including the crucial role sleep

plays in boosting creativity, the importance of honing sensory memory, and the neuron-firing benefits of certain foods. In *Think Smart*, the "wise, witty, and ethical Restak" (says the Smithsonian Institution) offers readers helpful suggestions for fighting neurological decline that will put every reader on the path to building a healthier, more limber brain.

Strange Universe Simon and Schuster
A strongly interdisciplinary and wide-ranging survey of the environment of life on Earth: the most authoritative and comprehensive source on environmental science to be collected together in a single volume. Unique in presenting both a basic overview and detailed information on environmental topics. Entries are arranged in an encyclopedic A-Z format and contain extensive cross-references to related entries, as well as references to primary and secondary literature. Over 370 separate entries prepared by 228 leading experts from 25 countries. Incorporates 25 substantial in-depth treatments of key areas and also includes biographies of leading scientists and environmentalists. Contains a comprehensive subject index and a citation index of all referenced authors. The *Encyclopedia of Environmental Science* is a multidisciplinary reference work, which crosses many fields of interest and includes a wide variety of scholarly and authoritative articles on mankind's environment. It provides information on the atmosphere, hydrosphere, biosphere and geosphere and is careful to focus on the connections between these realms and the Earth as a whole. Taken as a whole, the *Encyclopedia* surveys basic environmental science and applied areas of study, and is drawn from the physical sciences, life sciences and social

sciences. The 228 authors from 25 different countries, many of whom are the leading authorities in their field, include biologists, ecologists, geographers, geologists, political scientists, soil scientists, hydrologists, climatologists, and representatives of many other disciplines and academic specialties. The work, which is amply referenced and cross-referenced, consists of substantial essays on major topics, medium-sized entries and short definitional entries. The shorter entries include useful biographies of leading scientists and environmentalists. The Encyclopedia will be invaluable to all readers interested in the environment of life on Earth, its past, present and future, and its physical and social dimensions. The text provides a source of well-classified basic information as well as covering the leading theories and important debates in the environmental sciences. In addition, the book also includes assessments of the future prospects for the Earth's environment in the face of pollution, population increases and the accelerating transformation of land, air, water and vegetational systems. The Encyclopedia is unique in presenting both a basic overview and detailed information on environmental topics and is suitable for the general scientific reader and the specialized environmental scientist in academic institutions, research laboratories or private practice.

Spinoza and Deep Ecology BenBella Books

Examines the ramifications of Einstein's relativity theory, exploring the mysteries of time and considering black holes, time travel, the existence of God, and the nature of the universe

THE DEATH OF THE ETHIC OF LIFE

Henry Holt and Company

"Is Biocentrism Dead?" It is a topic that many find a bit off putting but it is a question that many individuals are starting to pose as they become wiser. The book explains what biocentrism is and how the tenets that surround this concept came into being. This is a book that the inquiring mind will appreciate thus it is ideal for the individuals who want to learn more about themselves and the world around them. The author gradually disseminates the information to the reader, allowing them to fully understand what biocentrism really means.

Leave It As It Is Princeton University Press

The startling discovery that the world was not flat challenged and changed the way people perceived themselves and their relationships with the world. This work features the revolutionary view that life creates the universe instead of the other way around.

Why Evolution is True Michel Leadership
From the cutting edge of science and living spirituality: a guide to understanding our identity and purpose in the world • Outlines the new understanding of matter and mind coming to light at the cutting edge of physics and consciousness research • Explains how we can evolve consciously, become connected with each other, and flourish on this planet • Includes contributions from Maria Sagi, Kingsley L. Dennis, Emanuel Kuntzelman, Dawna Jones, Shamik Desai, Garry Jacobs, and John R. Audette For the outdated mainstream paradigm the world is a giant mechanism functioning in accordance with known and knowable laws and regularities. The new paradigm

emerging in science offers a different concept: The world is an interconnected, coherent whole, and it is informed by a cosmic intelligence. This is not a finite, mechanistic-material world. It is a consciousness-infused whole-system world. We are conscious beings who emerge and co-evolve as complex, cosmic-intelligence in-formed vibrations in the Akashic Field of the universe. Ervin Laszlo and his collaborators from the forefront of science, cosmology, and spirituality show how the re-discovery of who we are and why we are here integrates seamlessly with the wisdom traditions as well as with the new emerging worldview in the sciences, revealing a way forward for humanity on this planet. They explain how we have reached a point of critical incoherence and tell us that to save ourselves, our environment, and society, we need a

critical mass of people to consciously evolve a new thinking. Offering a guidepost to orient this evolution, Laszlo examines the nature of consciousness in the universe, showing how our bodies and minds act as transmitters of consciousness from the intelligence of the cosmos and how understanding science's new concept of the world enables us to re-discover our identity and our purpose in our world. With bold vision and forward thinking, Laszlo and his contributors Maria Sagi, Kingsley L. Dennis, Emanuel Kuntzelman, Dawna Jones, Shamik Desai, Garry Jacobs, and John R. Audette outline the new idea of the world and of ourselves in the world. They help us discover how we can overcome these divisive times and blossom into a new era of peace, coherence, connection, and global wellbeing.
